THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

While there is no general increase in business, there are several encouraging features. First, the advance in prices of flour, wheat, corn, oats, pork and sugar, together with that for steel billets and beams and other iron and steel products, including No. 2 foundry pig, and for tinplates. The advance in wheat has continued so much longer than expected that the trade are again discussing the likelihood of this being the beginning of the long advance for cereals which they believe must come after the extreme depression of the past few years. Unfavorable crop reports from central western states, confirmation of previous short-crop reports from Argentine and Australia, small supplies in Europe and afloat therefor, but, above all, a revival of speculative interest in wheat, are underneath cereal prices. Advices to BRADSTREET'S from Buenos Ayres explain the lack of an available supply of wheat at Argentine ports as due to the "failure of the wheat crop."

Higher iron and steel prices have checked demand, and trade in those metals is smaller than for weeks past. The new steel combine antagonizes a number of large producers not members, as well as makers of cotton ties and tinplates, to whom high cost raw material means competition from abroad. In view of practically stationary production of pig iron during March, and a 60,000 ton increase of furnace stocks, the latest advance in Bessemer pig iron is less logical than that for billets.

Gross railway earnings reflect the March lull in trade. Percentages of gain over a year ago are less pronounced on all roads except the granger and Pacific lines. The least favorable showings are those reported by the southwestern and coal roads, while gains by the central westerns, trunk and southern roads are smaller than those shown in recent months. Total earnings of 115 railroad companies for March are $36,698,000, an increase of 4.6 per cent. over a year ago. In January and February the gains over the year before were, respectively, 11.3 and 13.7 per cent. The granger roads increase 21 per cent., while the Pacific roads gain 17.8 per cent. over a year ago. Only one company in these two groups reports a decrease. Coal road earnings decreased 10 per cent., and those of southwestern roads 5.4 per cent., while the gain of the trunk lines is only 1.5 per cent., southern roads 1.1 per cent., and central westerns less than half of 1 per cent. Increases in March outnumber decreases considerably, but the volume and number of large increases show decreases. For three months the earnings of 115 companies exceed those of a year ago by 9.5 per cent., following a decrease of .5 per cent. in March a year ago from the like month in 1894.

Brighter and more seasonable weather east, and needed rains in Missouri, Kansas and Nebraska, have tended to stimulate the belated demand for general merchandise. Renewed activity is also shown by lumber, now that the building season is open, and by paints, oils, glass and other structural materials, for like reasons.

There are only a few cities reporting a moderate improvement in general business. St. Louis, Kansas City and Omaha are thus conspicuous, but even there the gains are slight. St. Paul, Minneapolis and Sioux Falls report only fairly satisfactory spring business. At San Francisco business has not been active, but is better. Exports of general merchandise from Seattle, and of the same and lumber from Tacoma, continue to attract attention.

On the other hand, wholesale merchants at New York, Boston, Philadelphia, Baltimore, Buffalo, Detroit and Chicago report business unsatisfactory, practically without improvement. One of the most unfavorable features is the continued inability of interior merchants to make remittances promptly. Even at Chicago, where trade is less active than anticipated, many wholesalers do not look for an increase, owing to the lateness of the season.

Stocks of territory wools are unusually heavy, and a considerable proportion of them will have to be carried over. Trade in the raw staple is at a standstill. Dry goods continue depressed, shirtings and other cotton goods refusing to move freely, notwithstanding cuts in prices. Leather is also lower, and large orders for shoes have been placed because of lower quotations. The list of notable price reactions also includes those for wool and petroleum, while cotton, print cloths and coffee prices are substantially unchanged. Business failures in the United States this week number 231, compared with 236 last week, 225 in the week a year ago, 211 two years ago, and with 196 in the first week of April, 1893.

BRADSTREET'S regular quarterly exhibit of comparative prices of 108 staple articles, including live stock, shows higher quotations for 28 products on April 1, 1896, compared with 58 which are lower, and 18 which are unchanged, in contrast with corresponding quotations on January 1. Contrasted with one year ago there are increases of quotations for 48 items, while 5 are unchanged, and 49 are lower. As compared with three years ago, out of 108 quotations the prices of 17 are higher, 2 are unchanged, and 83 are lower. Various selected lists of quotations for food products among those quoted indicate that within the past five years their average price has declined from 25 to 33⅓ per cent.

Exports of wheat (flour included as wheat) from both coasts of the United States amount to 1,764,000 bushels this week, compared with 1,693,000 bushels last week, 2,934,000 bushels in the week last year, 1,955,000 bushels in the week two years ago, and with 2,948,000 bushels in the corresponding week of 1893. Indian corn exports amount to 1,391,000 bushels this week, compared with 2,199,000 bushels last week, and with 814,000 bushels in the week one year ago, and 2,040,000 bushels two years ago.

Total bank clearings aggregate $926,000,000 this week, thus continuing to reflect the slacking off in business, which has been so conspicuous. The decrease as compared with last week is 2.6 per cent., and as compared with the week one year ago nearly 3 per cent. The corresponding week in 1894 was one of extreme depression, and this week's total clearings show an increase compared with it of 7 per cent. But when comparisons are made with like weeks in preceding years continuous decreases are shown, 23.5 per cent. as contrasted with 1893, nearly 24 per cent. with 1892, and 12 per cent. as compared with the week in 1891.

Speculation in the New York stock market continues dull and professional. The fear of adverse developments in the Cuban situation caused bear selling and recessions in prices, but covering of short contracts has steadied the market. There is no tendency to liquidate, but the public and the foreign element are both out of the market, and there is no buying power. Bonds are dull and heavy. Manipulation in the industrials has been suspended in view of the general speculative halt. Foreign exchange is slightly lower at 4 88¾ @4.89 for demand sterling. The shipment of $1,300,000 gold to Germany this week is called a "special transaction."

Wholesale trade at Toronto and generally throughout the Province of Ontario remains quiet, largely because of the almost impassable condition of country roads. The like is true at Montreal, except that there is more activity in hardware. At Quebec city business remains dull and unsatisfactory. Unfavorable weather in Nova Scotia continues to act as a check on business, while heavy country roadways have a similar effect on mercantile collections. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $15,353,000 this week, against $16,202,000 last week, $17,500,000 in the week a year ago, $16,700,000 in the week two years ago, and as contrasted with totals fully 25 per cent. larger than that in corresponding weeks in 1893 and 1892. There are 30 business failures reported throughout the Dominion of Canada this week, compared with 43 last week, 26 in the week a year ago, and 38 two years ago.

FINANCIAL.

The Money Market.

In spite of the renewal of gold exports, an easier tone has appeared in the New York loan market, with some effect upon rates. Some hopes were expressed that a stiffer tone would assert itself on the reports that the Treasury would call in a further percentage of the money resulting from the recent bond sale, left on deposit with the banks. If such an intention had been entertained it was, however, abandoned. Reports were also current that foreign houses stood ready to put out considerable sums in this market provided the equivalent of 4@4½ per cent. for sixty days could be obtained. The appearance of a few loan bills in the market, however, was not sufficient to indicate that any considerable amount of transactions of this kind were effected, though at the close of the week a fair amount of such transactions are said to have been carried out. Money on call was easy throughout the week, the extreme variations being 3@4 per cent. There was no active demand for time money, while offerings were fairly liberal at 4@4½ per cent. for short and 4½@5 per cent. for long dates. The condition in mercantile paper has improved somewhat, the features of that market being the absence of any supply of choice names. Rates are on the basis of 5½@6 per cent. for doubles and best city names.

The New York Banks.

There were no important changes shown in the averages last week. A further decrease in the banks' cash holdings was noted, the items being an increase of $319,000 of specie and a loss of $1,566,000 in legal tenders, or a net loss of $1,246,000 in reserves. The really significant feature, however, was that the loans, in lieu of decreasing as they have done for some weeks past, expanded by about $228,000. The decrease in deposits was $419,000, and the surplus reserve suffered another reduction of $1,141,000. The figures of the statement compare as follows with those of the preceding week:

	Mar. 28, '96.	*Apr.* 4, '96.	*Changes.*	
Loans	$464,996,400	$465,224,900	Inc.	$228,500
Specie	58,931,900	59,251,000	Inc.	319,700
Legal tenders	79,769,400	78,203,300	Dec.	1,566,100
Deposits	482,215,500	481,795,700	Dec.	419,800
Circulation	14,216,000	14,254,500	Inc.	38,500
Total reserve	138,701,300	137,454,900	Dec.	1,246,400
Reserve required	120,553,875	120,448,925	Dec.	104,950
Surplus reserve	18,147,425	17,005,975	Dec.	1,141,450

At the corresponding period last year the surplus reserve was $13,929,905, against $80,797,975 in 1894.

Silver.

The silver market for the past week has been dull, featureless and almost unchanged. The recent discouragement offered to the bimetallists in Parliament and elsewhere has apparently taken the heart out of the speculation in silver. The New York market for bars has merely followed the London quotations.

SILVER PRICES.

	Apr. 4.	*Apr.* 6.	*Apr.* 7.	*Apr.* 8.	*Apr.* 9.	*Apr.*10.
London	31⅛d.	31⅛d.	31⅛d.	31 3-16d.	31 3-16d.	31 3-16d.
New York	68⅛c.	68⅛c.	68¼ c.	68⅜c.	68⅜c.	68¼ c.

Foreign Exchange.

Throughout the past week exchange has been firm and dull. There was little activity in the demand, but, on the other hand, the supply of commercial drafts is extremely small, and drawings in connection with stock transactions have absolutely ceased. At the close of the week some offerings of loan bills were reported which was reflected in the slightly weaker tone. It is well known that a considerable amount of money could be placed here by banking houses through the sale of 60-day drafts, but the stock demand and low rates for money is an obstacle to such transactions.

The market at the end of last week being at which is thought to be the gold-shipping point, no surprise was felt at the shipment of $800,000 on last Tuesday by Messrs. Heidelbach, Ickelheimer & Co. on the subsequent engagement by the same house of $500,000, forwarded by Thursday's German steamer. The nature of the transactions is, however, only imperfectly understood. The general impression is that they are special transactions, independent of actual conditions in the exchange market. Another feature of the matter was the non-appearance of any large offerings of bills that would indicate that the shipments resulted from their sale. It is, indeed, suggested that the transfer of the gold in question represents the repayment of gold loans contracted in Europe at the time of the recent government bond subscription. The impression, however, which prevails in the street is that the proposed reform of the Russian currency upon a metallic basis has caused a demand for gold, and that inducements equivalent to a small premium were offered for it "laid down" in Germany.

Posted rates remained at 4.89@4.90 till Friday, when they were reduced ½c. to 4.88½@4.89½, and actual business in demand sterling was 4.89@4.89¼, or a little under the latter figures. On Thursday, however, the market was easier at 4.89, sales being also made at a commission less than that figure. A further tendency to weaken rates was found in the fall of London exchange in Paris, which would correspondingly reduce the gold-shipping point of sterling here. On Friday the market was dull and weak on further offerings of loan bills.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

April 4.	*April* 6.	*April* 7.	*April* 8.	*April* 9.	*April* 10.
4.89	4.89	4.89	4.89	4.89	4.88½

@	@	@	@	@	@
4.89	4.89¼	4.89¼	4.89¼	4.89	4.89

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87¾	4.88	4.88	4.88	4.88	4.87¾
@	@	@	@	@	@
4.88	4.88¼	4.88¼	4.88¼	4.88	4.88

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.89@4.89¼; commercial bills, 4.87@4.87¼; francs, 5.16⅞@5.15; reichsmarks, 95¼@95 11/16.

The Bank of England discount rate is unchanged at 2 per cent. The bank this week lost £184,000 in bullion, and the proportion of reserve fell from 59.24 per cent. to 59.16 per cent. In the London open market call money is plentiful at ¼ per cent. and private discount easy at 9/16@5/8 per cent.

The following table shows the value of imports (exclusive of specie) at the port of New York for the week ending April 3, 1896:

	1896.	1895.
Dry goods	$2,362,094	$2,524,361
General merchandise	8,980,707	7,022,111
Total for the week	$11,342,801	$9,546,472
Previously reported	131,545,732	134,286,089
Since January 1	$142,888,533	$143,832,561

The exports (exclusive of specie) from New York to foreign ports for the week ending April 7 were $1,118,795 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$6,721,132	$7,332,345
Previously reported	99,376,032	89,890,436
Since January 1	$106,097,164	$97,222,781

THE STOCK MARKETS.

The New York Stock Market.

During the early part of the week the New York stock market, while dull and professional in the character of the trading, displayed a decided tone of strength. For the last few days, however, its inactivity was marked by an unsettled and declining disposition, though on Friday covering of shorts gave a firmer tone. The first demonstrations would seem to be a continuance of the effort, referred to last week, on the part of speculative interests to discount a possible improvement in the general trade situation coinciding with the beginning of the spring season. This was, at the time, regarded as somewhat premature, and the absence of public support or foreign participation would have necessarily arrested the further progress of the market before very long.. It would seem, however, that the bearish tendencies which again asserted themselves derived any positive character they may have displayed from the situation at Washington in regard to the Cuban question. The "street," in fact, appeared to disregard the adoption of the concurrent resolutions favoring recognition of Cuban belligerency. The acceptance by the House of Representatives of the Senate's form of this measure on last Monday was, indeed, almost without any effect on the stock market. The appearance of rumors of action by the President, possibly of a message to Congress taking advanced ground in regard to the relation of the United States toward Cuba and Spain, was what disturbed the market, inducing caution and conservatism in some quarters, and affording opportunity for the professional speculative element in and out of Wall street to institute bearish attacks upon various portions of the stock list. The latter class of operations were in several instances more or less successful, and resulted in concessions of a general character. At the same time some effect was produced by the crop news from the west, the decided impression that winter wheat throughout a large area of agricultural territory is in a decidedly bad way pointing to decreased earnings of a number of important roads which depend for traffic upon that class of grain. It cannot be said that the "street" has been particularly sensitive to the renewal of gold exports. The two shipments made by Messrs. Heidelbach, Ickelheimer & Co. on Tuesday and Thursday last, of course, attracted considerable attention, and were the subject of discussion both as to the presumable causes which led to them and their effect on the Treasury reserve and the financial situation in general. In the latter connection the general disposition is to consider that there is no ground for immediate anxiety, the reserve being so strong that considerable further gold withdrawals could occur without arousing a sense of danger. Moreover, it must be noted that the gold for the shipments was furnished to the firm in question by one of the large banks, and, therefore, for the present at least, does not figure as a reduction of the Treasury gold. The possibility of further calls upon this country to supply gold for use in connection with the probable reformation of the Russian currency upon a gold basis, and the advantage which the position of our finances offers to banking interests in Europe in connection with such transactions, is naturally a subject of attention, although nothing of a definite character can be learned either as to the alleged arrangements to that end or the possibility that this week's shipments were the first warnings of a specie drain from this country. In spite of this, the money market has been extremely quiet; the symptoms of pressure in connection with mercantile interests have materially subsided, and the supply of funds available for stock market purposes have been more than sufficient. The effect of this in making holders loath to sell at slight concessions continues to be the feature of current speculation, and is measureably responsible for the strong undertone which the market has continued to exhibit, as well as for the ease with which it rallies.

There have been in the past week few features of positive interest. American Tobacco might be excepted, the stock having experienced a marked decline in the face of the recent scrip dividend. If the latter was designed as an aid to bullish manipulation on the part of inside interest, it has been a miserable failure. Some observers, indeed, arrive at the conclusion that the so-called pool in this stock disposed of its holdings before the announcement of the dividend. At any rate, the stock has declined steadily from 95 on Friday, April 2, to 81⅞ on Thursday. Its downfall has been accompanied by reports that owners of the preferred stock of the company are about to institute legal proceedings to restrain the payment of the scrip dividend, while the death of an important member of the management has created uncertainty in regard to the disposition of his holdings. Sugar was very strong early in the week, and led the advance of the general market, rising to 119⅝. The general idea was created that the insiders have again taken it in hand for a bull campaign, which impression has not been dispelled by the fact that the price was ostentatiously allowed to recede to 117¼. General Electric has been one of the few strong features, rising from 36¾ to 38¼. There is no apparent manipulation in the stock, though the inside interests are quoted favorably in regard to pending efforts to make working arrangements with other electrical manufacturing concerns.

In the railroad share list the movements have been mainly in the form of slight declines, followed by rallies on covering. A few stocks, however, deserve particular mention. The Burlington company's annual report, published on Thursday, provoked a variety of comment. The salient fact in regard to the showing is that there was a deficit after payment of dividends in spite of the reduction in the rate. Union Pacific was more active, and showed some strength on the reports from Washington in connection with the proposed Pacific railroad funding bill. London and the continent sold the stock. Atchison securities were also fed out, and it would seem that interests connected with the underwriting syndicate have been realizing profits from the transaction. There was buying of Northern Pacific consolidated 5s on the news that the reorganization is making all possible headway, and that satisfactory arrangements with branch line bondholders are being concluded.

Boston Stock Market.

[Special to BRADSTREET'S.]

The market has been more quiet, transactions in stocks being about 20,000 shares fewer than in the previous week. Railroads rule a trifle easier at the close, the decline in Atchison being ½ point, with the same decline in Chicago, Burlington & Quincy and Mexican Central, while New York, New Haven & Hartford Railroad fell off 1½ points during the week. Coppers have shown more tone, with Boston & Montana 2⅜ points higher at the close. Sugar has ruled firm and closes ⅝ point higher, with Bay State Gas lower. United States Leather has been dull and featureless.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending			
	Price Apr. 9, 1896.	*Price Apr. 2, 1896.*	*Sales Apr. 9, 1896.*	*Sales Apr. 2, 1896.*

General Mention.

Northern Pacific matters are being actively pressed. Having obtained the bulk of the main line securities, J. P. Morgan & Co. are now turning their attention to the branches. They have already agreed on a basis of settlement with the Northern Pacific & Montana, which is one of the most important. The terms are 50 per cent. in new 3 per cent. bonds, bearing interest from January 1, 1897, and 50 per cent. in preferred stock of the new Northern Pacific Company.

TRADE IMPROVEMENT.

BETTER WEATHER, FAVORABLE CROP REPORTS AND HIGHER PRICES FOR CEREALS AND METALS.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, April 10.—Business continues slow, with trade in all lines more or less depressed. The demand for money is quiet and the tone is easier, although the supply is not excessive, and this keeps rates about steady. Four months' loans have been made by trust companies at 4½ per cent., but little year money can be obtained under 4¾ per cent. For mercantile paper about 5½@6 per cent. is asked. The market for boots and shoes is steady, but orders are booked at lower prices generally than the cost of leather will warrant. Leather is selling moderately, with buyers mostly taking small lots at a time and trying to force the price down. Hides are very dull, but offerings are light and values are fairly maintained. The iron and steel market is quiet, but the steel billet combine has started more inquiry for structural material. Lumber is quiet and steady, with a better prospect of business as the weather improves.

Philadelphia, April 10.—There is no appreciable change in the wool or other textile industries. Dry goods are moving very slowly, and there is a general complaint of poor collections. Leather and morocco continue dull and shoes show no improvement, all grades having a downward tendency. There is a slight advance in petroleum. Sugar is a shade higher, and there is an increased demand for paints and glass. Iron is dull and prices are low, but the indications point to better conditions.

Pittsburgh, April 10.—The volume of business is probably a little larger than last week, but the busy season has not set in. Demand for dry goods is not up to expectations, but there is a fair movement in provisions at satisfactory prices. There is no improvement in collections, which are still unsatisfactory. The business done in iron this past week was probably not as large as that of the week previous, but the market is firm at present quotations, which are a notch higher. The iron

and steel trade consider the outlook favorable, and believe an increased demand will be noted within a short time.

Buffalo, April 10.—Trade in all lines continues quiet, and no improvement is noticeable. Collections are still reported slow and hard to make.

Baltimore, April 10.—Trade continues quiet. The week is disappointing. There is no improvement in collections and a marked absence of nearby trade.

West and Northwest.

Cleveland, April 10.—Jobbing business in other than leading staple lines is inactive. Collections are unsatisfactory. The general trade situation is without material change from that of March.

Detroit, April 10.—The movement of dry goods, millinery and kindred lines is being retarded some by continued unseasonable weather. In groceries, hardware, clothing and shoes a fair business is doing. Collections, however, continue poor.

Chicago, April 10.—There is a better trade with the dry goods and clothing houses, but sales show no increase, and are not expected to, owing to the lateness of the season. Stocks are larger than usual with jobbers, as sales have been below anticipations. There are fair orders for shoes, and manufacturers are buying moderate stocks of leather, as tanners are anxious to sell at reduced prices. Sales of light hardware and bar iron have increased, and liberal orders are coming for all descriptions of steel, owing to the firmness among manufacturers. The mills here have sufficient orders to run till June 1, and have advanced prices $3 to $3.25, making the Chicago rate on steel billets $21.25, rods $28 and standard rails $29. Fair sales of pig iron are reported at full prices. Building materials show fair activity, and lumber has commenced to arrive by lake. The produce trade is fair. Potatoes are firmer and butter lower. Wool receipts, 116,963 pounds.

Louisville, April 10.—A quiet tone characterizes trade in general. Merchandise offerings in leaf tobacco have improved somewhat in quality, and all grades of colony tobacco attract competition.

St. Louis, April 10.—Warmer weather has stimulated business to some extent among retailers, while jobbers and manufacturers say there is a better feeling in nearly all quarters. Mercantile transactions are fully as large in volume as at the same period last year, although bank clearings would indicate to the contrary. Sales of oak and hemlock sole and light harness leather show a decided improvement. Furnace agents say trade is fair in nearly all grades of pig iron and that No. 2 foundry has advanced 25c. per ton. Paints and colors show signs of life with the advent of spring. Lumber is moving slowly, with light receipts. Collections are fair. Bankers are satisfied with counter business.

Kansas City, April 10.—Jobbing and retail houses have had very satisfactory trade the past week. Good rains in this locality sustain large crops for the coming season. Collections are fair.

Milwaukee, April 10.—The volume of trade continues rather light, though some lines seem to pick up a little. Collections are slow.

Des Moines, April 10.—Jobbing trade for the month compares favorably with past years; collections are not so favorable compared with some, but average as good. Retail lines are quiet. State crop report, just out, shows a good condition throughout the state, and a good rain all over the state much improves the crop prospects.

St. Paul, April 10.—The spring season in most jobbing lines is nearly over, but some good orders are still being received from general store dealers. This is all true of hardware. Hat and cap houses have replaced spring samples with fall goods, and some have their salesmen already in the field. Collections are improving and thought up to the average at this time of the year.

Minneapolis, April 10.—Trade is fair in most lines, but collections are slow.

Omaha, April 10.—Jobbers report a slight improvement in trade, and also in collections, which is probably attributed to the recent rains throughout the state.

Sioux Falls, April 10.—Jobbers notice some improvement in trade, with fair collections. Retail trade is fair. Seasonable weather is an encouraging feature.

Southern Cities.

Charleston, April 10.—Wholesale boots, shoes and dry goods report a good trade for the week, closing a little dull. Groceries are very quiet.

Savannah, April 10.—Trade is only fair for the week. Collections are good. Naval stores are firm and in good demand. Receipts are gradually increasing.

Atlanta, April 10.—Trade continues quiet and collections only fairly good.

Augusta, April 10.—Trade continues quiet, with collections not much improved over the past few weeks.

Jacksonville, April 10.—There is no material change in trade over last week. City and country collections still continue good.

Birmingham, April 10.—Business on the whole is somewhat disappointing.

Chattanooga, April 10.—Trade has improved slightly. Collections are satisfactory.

Nashville, April 10.—Wholesale trade is quiet. Collections continue fair. In retail circles dry goods and millinery show activity. Clothing is quiet. Money continues close to legitimate trade channels.

Memphis, April 10.—General trade for the week has been quiet. Collections are fair.

New Orleans, April 10.—The volume of trade is fair and promises some improvement. The cotton movement smaller. Sugar supplies are being marketed quietly.

Galveston, April 10.—Trade remains quiet in all lines, particularly in dry goods. Collections are poor.

Pacific Coast.

San Francisco, April 10.—Commercial lines show a moderate but not active improvement. The outlook for a good wheat crop is favorable. Prices are steadier, owing to increased foreign demand. Sugar advanced another ⅛c. Freights are steady and produce market fair. Collections are still slow.

Portland, April 10.—Fishermen and cannerymen on the Columbia river have disagreed on the price to be paid for salmon by the cannerymen, and the canneries are not expected to commence running at the beginning of the open season as usual. Wet weather and numerous political conventions have interfered largely with general trade during the past week. Collections are fair.

Tacoma, April 10.—General trade is reported better than last month. The lumber trade is exceedingly active to California, Australia, Africa, and one cargo for France. A vessel is now loading lumber and flour for Central America.

Seattle, April 10.—No material change is noted in the trade situation. Steamer arrived from Central America with $80,000 in silver bullion from France, and will return with general cargo. March shows an increase all around in general shipment of goods.

Canada.

Toronto, April 10.—Business in wholesale circles is quiet this week. The bad state of country roads is still a hindrance. Wheat is higher, with sales of white along the lines at 76@77c.

Montreal, April 10.—Activity is noticeable in hardware, paints and oils. Groceries and dry goods do not show any improvement over last week. Flour is weaker and declining. Receipts of maple products are increasing and prices are lower. Country roads are breaking up somewhat. Collections are slightly lower than the average. Quebec city reports trade generally dull and unsatisfactory, with moderate activity in hardware and groceries.

Halifax, April 10.—The weather conditions have not been favorable, consequently there is not much activity in general trade. Roads are still in a bad state. Collections continue slow.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

TOTAL EXPORTS OF WHEAT AND INDIAN CORN FROM UNITED STATES AND CANADA, ATLANTIC PORTS WITH DESTINATIONS, FROM MARCH 28, 1896, TO APRIL 3, 1896, INCLUSIVE.

Dry Goods.

[Special to BRADSTREET'S.]

The market continues quiet, with the general situation more or less depressed. The lower prices made for cotton goods has not induced any more trading, as the feeling is that values will keep low for some time to come, notwithstanding the steady tone to raw cotton. The weather has ruled unfavorable for the retail trade, and this keeps business slow. Printed fabrics are quiet outside of those fancy specialties which have sold well all of the season. American shirtings and Merrimack shirtings have been reduced ½c. in price to tempt business. Ginghams are slow of sale and featureless Agents report a fair amount of orders for fall dress woolens being booked, and the prospect favors a fairly good business. Men's-wear woolens are dull, with the market depressed and the mills very sparsely supplied with orders. Much machinery is forced to be idle owing to lack of business.

Wool.

[Special to BRADSTREET'S.]

Sales have fallen off more, the demand being almost nil. Manufacturers appear to have no present need for raw material. The matter of price does not cut much figure in the demand. A sale of XX and above Ohio fleece has been noted at 18c., and 18@19c. would be the extreme of the present market. Medium washed fleeces are in small supply, and held fairly steady in the absence of trade. Territory wools are in excessive supply for the season, and a large amount will have to be carried over, as there appears to be no possible chance to absorb it before the new clip. Australian wools are held firm by the strong position abroad, but sales are moderate, and it takes but little to meet present needs. Carpet wools are slow of sale, but held steady.

THE PRODUCTION OF COAL.

A Board of Trade report just issued shows that in 1894 the United Kingdom produced 188,277,000 tons of coal, Germany 76,741,000, France 26,964,000, Belgium 20,534,000, Austria 9,573,000, Japan (1893) 3,371,000, and the United States 152,448,000 tons. Canada produces between 3,000,000 and 4,000,000 tons, and in addition imports about

half her total consumption, principally from the United States. New South Wales produces about 3,500,000 tons, but, unlike Canada, her output is practically stationary. New Zealand yields over 500,000 tons per annum, but shows little or no increase. Natal's output rose from 26,000 tons in 1889 to 141,000 in 1894. Similarly in British India the production has steadily risen from 1,316,000 tons in 1883 to 2,821,000 tons in 1894. The countries which import coal in excess of the amount they export are Russia, Sweden, France, Spain, Italy and Austria-Hungary; and of British possessions, Canada, Victoria, Queensland, Tasmania, New Zealand, the Cape and British India, together with all the minor colonies with the sole exception of Labuan (Borneo). Of Russia's consumption 79 per cent. is her own coal, 17 per cent. is British coal, and 4 per cent. comes from other countries. In Sweden 88 per cent. of the coal consumed is British, in France 12 per cent., in Spain 50 per cent., in Austria-Hungary less than 1 per cent., and in Italy nearly the whole is of British origin. The number of persons employed in coal production in 1894 was: United Kingdom, 665,747; Germany, 299,627; Belgium, 117,103; France, 131,587; Japan (1893), 30,345; the United States (1893), 363,309; British India, 43,197; Canada, 9,654; New South Wales, 9,131; New Zealand, 1,899, and the Cape, 1,601.

TWO VIEWS OF THE NEW BESSEMER STEEL POOL.

The *American Manufacturer* says: "The iron and steel trade during the greater part of the last week was considerably excited over the announcement that the Bessemer steel makers had made an arrangement by which they would at once put the price of billets up to $20, and insist that this should be the figure for the coming month at least. We are informed that this rate was made for one month only. Although this movement was heard of with surprise by many connected with the trade, it was begun some time ago, and its origin can be easily traced. The fact is the steel makers found themselves compelled to do something in the way of securing living prices, as the higher cost of material made such a step absolutely necessary. A short time since advanced prices for iron ore for the coming season were announced by the ore producers. For the highest grade Bessemers of the old ranges $4 was fixed, and for the best grades of the Mesabi range from $3.40 to $3 75 per ton was announced. This, added to the higher cost of fuel, made higher figures for billets necessary. Accordingly the arrangement was made, and at this writing a meeting for completing its details is being held in New York city.

"Those who have watched the course of the iron and steel market during the past three years can easily see how the trade has been demoralized through the lack of concerted actions. Prices of raw materials and also finished products during the period mentioned were the lowest ever seen in the country. In many cases manufacturers virtually gave away their product, and the cutting of prices went on to a deplorable extent. The movement announced is expected to do something toward changing these conditions. It is admitted on all sides that a higher range of values would be beneficial to the trade at large. It is hardly fair to apprehend a too radical movement on the part of the producers of iron and steel, for they well know how unwarrantably high prices would stimulate imports, and even aside from this it is not to their interest to declare prices which cannot be sustained. The billet makers are not alone in their determination to secure higher prices. The southern pig-iron producers in the Birmingham district a few days since entered into a compact by which they established a joint selling agency, by which means they hope to sustain rates, which, through close competition, have been greatly reduced.

"The question as to how far the steel pool can be made effective is being asked by those who watch the course of trade consolidations. To make it successful a curtailment of production is necessary. This has in many cases been found a hard thing to accomplish. True, it has been done in the steel rail trade, but it may be more difficult in a line where so many concerns are engaged. It is to be hoped that fair rates will be sustained, and in this the pool should be successful. In fact, the present circumstances are such that some believe higher rates would soon come without any concerted effort. Those who are most scary of the word 'combine' when used in connection with a trade movement must admit that anything that will give the iron and steel market firmness will be beneficial to buyer as well as seller, as it will tend to make the entire business of the country more active. This is what the steel pool is for, and this is what it should accomplish."

The *Engineering and Mining Journal* says it "is not anxious to see producers compelled to work at a loss, either because of undue competition or from any other cause, but it does not believe that a combination of this kind is good policy in the long run, whatever immediate advantages its adoption may seem to offer. The power given to the members is too tempting not to be abused, and the best way for all concerned is to avoid the risk altogether.

"The price of $20 at mill for billets, said to have been fixed, is, perhaps, not a high one just now; but its effect on the trade under present conditions is sure to be unfavorable, and the prospect of high prices will hold back a great deal of business, just as the street-rail combination has found.

"Leaving aside considerations of this kind, and looking at the matter from a purely trade point of view, the result of the movement can easily be seen. The pool, or agreement, or whatever term it may go by, is for the purpose of governing the price of steel billets sold in that form. The very large quantity of billets which are not sold, but are worked up into finished shapes at the mills owned or controlled by the steel-making companies, will continue to come to those mills at the cost of production, and not at the fixed price, whatever it may be. The outside mills—those which make finished products from purchased billets and do not own steel plants—will be at the mercy of the combination, which can at any time put the price high enough to take away their profit and prevent them from competing for business. As long as there is plenty of work for all, this will probably not be felt; but should business decline there is little doubt that the power held will be exercised, and the smaller mills be compelled to stop. The prospect for them is not a pleasant one."

IRON AND STEEL INDUSTRIES OF SPAIN.

The London *Iron and Coal Trades Review* says: "The (British) Council of the Iron and Steel Institute having accepted an invitation to hold their autumn meeting in the north of Spain, it becomes a matter of interest to ascertain what are the resources of that country from a manufacturing point of view, and what the members of the institute are likely to see in the land of the Dons. For many centuries the steel of Spain has been celebrated. A Toledo blade is still as well known and as highly spoken of as it was in the Middle Ages, and certain ancient establishments distinguished at that time for the high quality of steel that they produced continue to exist, but, like the beauty of the Spanish ladies—if we may be pardoned so ungallant an allusion—they live rather upon the reputation of the past than upon the merits of the present. The modern iron and steel industries of Spain are carried on in the two provinces of Vizcaya and Asturias. In the former there are two considerable works—one, the Soc. de Altos Hornos, which last year produced 84,400 tons of pig iron and 70,500 tons of steel, and the other, the Soc. Vizcaya, which in the same year produced 70,500 tons of pig and 24,000 tons of steel. In the Asturias there are three pig-iron making establishments, but all of them are of comparatively small dimensions—the Soc. Fábrica de Mieres, the Soc. Duro y Cia. and the Soc. Moreda y Gijon. These works collectively produced in 1895 51,500 tons of pig and 32,000 tons of finished steel. The total output of pig iron in 1895 was therefore 206,430 tons, of which 22,669 tons were exported. Some years ago it was apprehended that Spain might easily become a very formidable competitor of England on the Mediterranean and in other markets. This anticipation, however, has not hitherto been realized to any large extent. The exports of pig have, it is true, been up to some 50,000 tons a year, and in 1894 they were as much as 48,538 tons, but they do not show a liability to increase. The countries to which the Spanish pig is imported are chiefly Italy, Germany and France, and, strange to say, in 1894 6,688 tons were received by Great Britain, while nearly one-half of that quantity was taken by Holland. The locality of Bilbao is no doubt extremely favorable to the production of cheap iron. The works are practically on the seaboard, and they have the ores at least 5s. per ton cheaper than works making the same description of pig in the Cleveland district, Scotland or South Wales, while they have only 4s. to 5s. more to pay for their coke, but, in spite of this fact, and despite modern plants and relatively cheap labor, the reputation of the peninsula as 'a foeman worthy of our steel' has still to be made.

"Spain, however, continues to lead the world as an iron-ore exporting country, and it is from this point of view that it chiefly possesses interest for the British manufacturer and economist. The total quantity of iron ores exported in 1895 amounted to 5,248,192 tons, of which 4,354,133 tons were exported from Bilbao alone—the locality to be visited by the institute. The most important iron ore enterprise at Bilbao is the Orconera Iron Ore Company, which produced in 1894 as much as 1,026,686 tons of ore, while another important concern, the Franco-Belge Company of Somorrostro, produced 458,330 tons. Next to Bilbao, the principal Spanish iron-ore producing district is that of Santander, which turned out nearly 500,000 tons of ore in 1895, and, in the south of Spain, Seville, Marbella, Almeria and Carthagena have of late years been rising into importance. We have said enough to show that the iron industry of Spain, taken as a whole, is sufficiently important to justify the members of the institute in looking forward to a pleasant and profitable reunion, apart from the interest which always attaches to the peninsula, both from a historical and an ethnological point of view."

LONDON ASSOCIATED CHAMBERS OF COMMERCE.

The London *Times* says: "The thirty-sixth annual meeting of this association was opened on Tuesday at the Hotel Métropole, Sir A. K. Rollit, M. P., presiding. The chairman, in moving the adoption of the annual report, spoke of the satisfactory progress of the association, and reviewed some of the chief features in the history of trade during the past year. The report was adopted. A resolution expressing to the New York Chamber of Commerce appreciation of its friendly feeling and a strong desire that some method acceptable to both nations might be found of settling in a conciliatory spirit the differences between the two states was carried. There were two or three dissentient votes, which were greeted with cries of 'shame.' Sir E. H. Carbutt and Sir A. Haslam had objected to the resolution if it meant that we were to climb down. The meeting, by a unanimous vote, agreed that a reciprocal message of good will and respect should be telegraphed to the American Board of Trade of Philadelphia. Resolutions indorsing Mr. Chamberlain's policy for the development of African colonies, advocating railway connection between Burma and southern China, and dealing with other subjects, were agreed to. Southampton was fixed as the place for the autumnal meeting, and it was decided to invite Sir Stafford Northcote to be president for the ensuing year.

"On Wednesday various resolutions in reference to postal and telegraphic facilities and reforms were adopted, including one strongly urging the government to initiate imperial penny postage. The Duke of Norfolk (Postmaster-General) then spoke, and promised his earnest consideration to the criticisms he had heard. Dealing in detail with several of the changes proposed, he pointed out the practical difficulties in the way of their accomplishment. However, he said, the matter of imperial penny postage was one of great importance, and would next year undoubtedly be considered on its merits. Resolutions were subsequently adopted in reference to technical education and the desirability of government action to secure an increased supply of trained British seamen.

"Mr. Ritchie, referring to the difficulty with 'our brethren in the United States,' said that the difficulty was in a condition which led to the hope that a solution would soon be found. It had always been the desire of Her Majesty's government to find a solution by friendly arbitration within limits which would be approved by the people of this country, and he would go further and say that they would be glad to find some permanent court of arbitration by which any difficulties between Great Britain and the United States might be solved without danger of conflict. There were now proposals before the government of the United States proceeding from Lord Salisbury which, it was hoped, would result in the establishment of some system of arbitration for all cases. (Cheers.)"

WHAT THE NASHVILLE EXPOSITION CAN DO.

The Baltimore *Manufacturer's Record* says the progress of the Nashville Exposition, as outlined by its correspondent, "indicates that the south is to have another exposition equalling in its influence upon this section the great work accomplished by Atlanta. The world has for some years seemed to think that in Atlanta are centered all the energy and enterprise of the south, and that no other city in this section could have successfully handled such an exposition as Atlanta's. The *Manufacturers' Record* has ever been foremost in giving full praise to the tireless energy of Atlanta, but it is glad to note that there is a prospect of the world's seeing that Atlanta's enterprise is but typical of the whole south. Nashville has an opportunity to show that this is true. It can demonstrate by a grand exposition that the same energy and enterprise which made success possible in Atlanta can be found in every part of the south, and only needs the opportunity to prove what this section can do. This is what Nashville has undertaken. Its success will do even more for the south than the Atlanta Exposition accomplished, because it will emphasize the fact that not in Atlanta alone, but all over the south, is there a determination to develop to the fullest extent the resources of this section, and that the energy and enterprise needed for this great work are being stirred into activity everywhere. The *Manufacturers' Record* looks to Nashville to carry forward the educational campaign, which must never halt until the whole business world sees what this section has and what its own people are accomplishing."

PLAIN SPEECH FROM A CRITIC.

The London *Iron and Steel Trades Journal* of March 21 was so stirred by the claim that "Mr. William Kelly of Pittsburgh" was the actual (prior) inventor of the Bessemer process that it delivered itself in part as follows:

"It constantly happens with regard to important inventions that the right of priority has been disputed. This has been the case in cotton manufactures, in locomotive engines, in hot and cold blast furnaces, in steamships, and in telegraphy. We are not, therefore, surprised to find that in the United States a claim has been set up by Mr. Weeks, as fully reported in our issue of the 7th inst., that the real discoverer of the Bessemer process was a Mr. William Kelly, of Pittsburgh, who claimed that he 'conceived and successfully practiced this invention in 1847, at least seven years before Bessemer discovered the process.' In this claim there are two or three points requiring explanation. We are told that when Mr. Kelly heard of the Bessemer patents in 1856, he at once recognized the process as one that he had invented some years before, and had been experimenting with at his furnace and forge. But he had never patented the invention; he had not brought his production to market; it was still an idea and an experiment. No one has suggested that Mr. Bessemer obtained his idea from Mr. Kelly. No one can suppose that Mr. Bessemer's patent was conceived and completed in the year 1854. He may, in fact, have been working at it years before that time, but the Crimean war, and the necessity for better steel ordnance, probably stimulated him to new and prompt exertion. It is clear, however, from Mr. Weeks' own statement, that Kelly had some vague notion of the principles underlying the Bessemer system, but that he was utterly incapable of turning them to practical account. Kelly only wanted to assist his production of wrought iron. Bessemer, from the first, aimed at the production of steel. It is true that priority of invention was awarded to Kelly by the United States Patent Office, but the British public has not unbounded faith in that or any other department of the United States government, with the single exception of the Supreme Court."

Northern Pacific Reorganization.

NEW YORK, PHILADELPHIA AND BERLIN,
April 4th, 1896.

Holders of two-thirds in amount of the undermentioned bonds, certificates and notes, having, in person or through their representatives, already accepted the plan and agreement of reorganization dated March 16th, 1896, all holders of outstanding

Northern Pacific R. R. Company's
General Second Mortgage Bonds,
General Third Mortgage Bonds,
Dividend Certificates,
Consolidated Mortgage Bonds,
Collateral Trust Notes,
Preferred Stock,
Common Stock,
AND
Northwest Equipment Stock,
AND
Trust Company's Receipts for the above described bonds,

are hereby notified to deposit their holdings with any one of the undersigned on or before Thursday, APRIL 23D, 1896, receiving suitable certificates of deposit therefor.

Deposits after that date, if accepted at all, will be subject to such terms and conditions as may be imposed by the Managers.

Holders of certificates heretofore issued by the Mercantile Trust Company of New York for Bonds deposited under the Bondholders' Agreement of February 19, 1894, not already stamped by us as assenting to the plan and agreement of March 16, 1896, are hereby notified to present their certificates at one of our offices on or before Thursday, April 23d, 1896, in order that we may stamp their approval thereon. The Managers have the right, which at any time hereafter, in their discretion, they may exercise, to exclude absolutely from the plan any holders of such receipts who shall not conform to the requirement to present their receipts for stamping, as expressly assenting to the plan and agreement.

The cash payments in respect of stock will be payable upon dates hereafter to be announced.

Security-holders are invited to obtain from us copies of the plan and agreement, as all depositors are bound thereby. Many features of much importance to security-holders are therein set forth.

Any further information connected with the reorganization, desired by security-holders, will be furnished on application at any of our offices.

TO THE BONDHOLDERS OF THE
Northern Pacific & Montana Railroad Company
AND THE HOLDERS OF
Knickerbocker Trust Co. Receipts therefor.

NEW YORK, April 8th, 1896.

The undersigned Committee, after negotiation with the Northern Pacific Reorganization Managers, has arranged with the latter that, pursuant to the provisions of page 14 of the Plan of Reorganization of the Northern Pacific Railroad System, the bonds of the Northern Pacific & Montana Railroad Company may participate in such reorganization, receiving for each $1,000 present bond, with all unpaid coupons attached,

$500 in the new 3 per cent. General Lien Bonds, bearing interest from January 1st, 1897,

$500 in the New Preferred Stock Trust Certificates of the reorganized Northern Pacific Railroad Company.

Holders of bonds of the Northern Pacific and Montana Railroad Company, or of Knickerbocker Trust Company Receipts therefor, in order to participate in this arrangement, are notified to deposit their bonds or receipts with Messrs. J. P. MORGAN & CO., 23 Wall Street, New York, not later than APRIL 23d, obtaining in exchange therefor suitable reorganization certificates to be issued by them. Bonds or receipts not so deposited may, at the discretion of the Reorganization Managers, be excluded from the benefits of this arrangement.

The undersigned committee are unanimously of the opinion that prompt acceptance of the foregoing proposition is for the best interests of all bondholders or receipt holders.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, APRIL 18, 1896.

Talk of the adjournment of Congress has been current in Washington during the week. It appears that the members of the House Committee on Rules have been trying to arrange a programme for the rest of the session which will allow of an adjournment by about the middle of May. Among the measures which are understood to have been given the right of way are the Bankruptcy bill, the bill for the codification of pension laws, and as many contested election cases as can be prepared in time for action. One of the obstacles in the way of adjournment is the River and Harbor bill, which is in the hands of the Senate. In the latter body the expectation of an early adjournment does not appear to be so strongly entertained, the belief prevailing there that an adjournment cannot be looked for earlier than the first week in June at least.

In his address at Chicago to representatives to labor and trade associations this week on the currency question, Secretary Carlisle went over ground which he has already rendered familiar in a series of notable speeches in different parts of the country. There can be no doubt, however, that much is gained by the reiterated advocacy of sound monetary views, and the audience addressed by the Secretary was of a kind which it is important to reach. It is certain that the cause of sound money lost nothing by the clear and cogent presentation by Mr. Carlisle of the evils which would be inseparable from any acquiescence in the demand for free coinage at the rate proposed by the rampant silverites, a demand which requires, as the Secretary said, that the United States alone shall declare by law that sixteen ounces of silver are equal to one of gold, when it is everywhere recognized that in all the markets of the world sixteen ounces of silver are worth only about one-half as much as one ounce of gold, and will purchase only about one-half as much of the necessaries of life.

Another one of the states which will present a presidential candidate at the National Republican Convention has been heard from upon the currency question. The Maine Republican State Convention, which met at Portland this week, in presenting the name of Speaker Reed as a candidate for the presidency, announced in a series of declarations regarding Mr. Reed's position upon public questions, which must be taken as representing the platform of the convention, that Mr. Reed is opposed to the free and unlimited coinage of silver except by international agreement, and that until such an agreement can be obtained he is in favor of the maintenance of the existing gold standard. The Maine declaration appears to be upon the same lines as that adopted by the late Republican convention in New York, though it is a little less pronounced. No stronger declaration has been adopted than that of the New Jersey Republican Convention to the effect that the standard of value in this country and in the other principal commercial nations of the world is gold; that wages and prices have been fixed in accordance with that standard, and that the welfare of the people demands that it be maintained.

The Senate has at length ratified the treaty between the United States and Great Britain providing for the appointment of a commission to assess damages alleged to have been sustained by Canadian sealers, whose vessels were seized by the officers of the United States for alleged illegal sealing. The treaty has been amended by expunging the word "award," where reference is made to the proceedings of the Paris tribunal, on the ground that that body did not make any award on the question of damages. Another amendment permits the commission to sit at San Francisco, as well as at Vancouver, to which place the sittings of the commission were restricted in the treaty as originally framed. As has already been indicated in these columns, the treaty provides that each government shall appoint one commissioner, and that if they cannot agree the President of the Swiss Republic is to appoint a third.

Rumors have been current this week to the effect that the President had sent, through the State Department, a note offering to mediate between the Spanish government and the insurgents in Cuba. Reports have been made public purporting to give the tenor of the communication, and though these are circumstantial in appearance, the absence of any official confirmation of the rumor suggests the importance of hastening slowly in commenting upon the reported terms of the communication.

Some time ago it appeared to be generally understood that no action in reference to the admission to statehood of the remaining territories would be taken at the present session of Congress. The recent action of the House Committee on Territories upon the Arizona and New Mexico bills has revived interest in the chances of those territories to acquire the condition of statehood. In the Senate similar action has already been taken by the Committee on Territories, and there seems little doubt that if their claims were pushed the territories mentioned might get a favorable vote in the upper chamber. What their strength in the House may be remains to be seen. One strong objection to their admission under present conditions is the increase it would give to the strength of the free coinage element in the Senate—a matter of much importance under present conditions.

The House appears to be nearing action upon the long mooted question of the status of alcohol to be used in the arts. Section 61 of the tariff law enacts that any manufacturer finding it necessary to use alcohol in the arts, or in any medicinal or other like compound, may use the same under regulations to be prescribed by the Secretary of the Treasury, and that on satisfying the collector of internal revenue for the district wherein he resides or carries on business that he has complied with such regulations and has used such alcohol therein, and exhibiting and delivering up the stamps which show that a tax has been paid thereon, he shall be entitled to receive from the Treasury of the United States a rebate or repayment of the tax so paid. The Ways and Means Committee has just ordered a favorable report on a bill which provides for the repeal of this section of the tariff law.

A favorable report has been ordered by the Senate Committee on Agriculture on a bill which recodifies the existing laws bearing on animal and meat inspection, and makes several important additions to them. The additions include provisions putting the inspection of meat products and live stock, the extirpation of infectious and contagious disease, the regulation and transportation of live stock, and the prevention of the exportation or importation of diseased stock in the direct charge of the Bureau of Animal Industry. Stock exposed to contagion, as well as those already affected, are included within the inhibitions of the bill. Transportation companies are forbidden under a penalty of $1,000 from receiving or shipping infected animals from interstate commerce, and shippers of meat products are required to mark packages plainly so as to indicate the species of the animal. Inspectors are authorized to condemn such animals and carcasses as are found diseased and, if necessary, to destroy them. It is made unlawful to import carcasses of diseased cattle or other live stock, which have not been inspected or certified. Some of the penalties under the act are very heavy, fines amounting to $5,000 being imposed in some instances.

In order to make a lien on railroad property, the bonds or certificates of such lien must be issued and certified, and the instrument securing the lien must be recorded as provided by statute; unless such procedure has been specifically gone through, stock certificates simply make the holders owners of the property subject to the lien of creditors. This is the substance of a decision just rendered by Judge Ricks, in the United States Circuit Court for the Northern District of Ohio. The case in which the decision was rendered arose out of a claim made by preferred stockholders of the Toledo, St. Louis & Kansas City Railroad that they held a lien on the property of the company which was being foreclosed by the bondholders, the claim being based on a statement on the face of the stock certificates that the preferred stock constituted a lien on the property next to the first mortgage. The decision was to the effect that the claim was not well founded.

A most satisfactory showing as to the financial position of the British Treasury was made in the budget speech of the Chancellor of the Exchequer this week. The Chancellor said that, despite the fact that the expenditure of the last fiscal year had been larger than that of any year since the last great war, the surplus in the Treasury was the largest that had ever been known, and the credit of the country was never so high. The yield of consols to the purchaser, he said, was just about half what it was a century ago, and a larger sum had been applied to the reduction of the national debt than had ever before been applied to that end within a similar period. The deposits in savings banks and permanent accounts in ordinary banks had mounted to an unprecedented point. The amount of bullion in the Bank of England was £49,000,000, and the reserve fund in the bank, in proportion to its liabilities, was the highest on record. The increase in the value of exports, imports, railway earnings, and bankers' and clearing-house returns showed a continuous expansion of trade. The revenue for the fiscal year had been £101,974,000, while for the year 1894-95 the revenue had been only £94,684,000, showing an increase of £7,290,000, and making an excess of £5,812,000 over the estimates. A great feature in the revenue returns has been in the increase of revenue from tobacco, wine and tea, the latter having steadily driven coffee out of the market.

THE RISE IN STOCK VALUES.

After a period of speculative inactivity, the Wall street market presents indications of developing wider speculation and healthier tendencies. The present week has witnessed not merely an appreciation in quotations for active railroad and industrial shares on the Stock Exchange, but the reappearance of outside interest in the market and of foreign buying as well. The latter, indeed, is considered the most important development in this connection. During the advance which occurred last spring and summer London maintained a critical attitude towards American securities, which the Venezuelan incident converted into a positive liquidation. Since then London has been indifferent as regards the course of this market when it has not actually displayed bearish inclinations in regard to our stocks. The present change in sentiment there seems due to a variety of causes, and has resulted in a certain amount of investment purchases, as well as professional bullish operations, in the American department at London. While some influence may be attributed to the success of the recent government bond issue and the maintenance of the Treasury gold reserve, it would appear that local causes have contributed in no small degree to attracting attention towards Americans. It was pointed out in these columns not long ago that the glut of money in the London market was growing more intense, and that the values of all the more favored class of securities there had reached the point which left little inducement either for investment or speculation therein. Another factor is the unsettled condition of affairs in South Africa, which has checked the outlet for capital in that direction, and tended to bring our securities into increased favor. The importance of such a movement on the part of the foreign investing public cannot be overestimated. Although it has not yet attained the proportions of a large buying demand, it already affects the tone of exchange, supplementing the influence of the loans of foreign money which for several weeks past have been offered in this market. The irregular weakness of foreign exchange during the past fortnight is, indeed, mainly attributed to these two causes, without which there would doubtless have been further withdrawals of gold from the Treasury similar to the recent shipments of $2,000,000 on "special orders" to Germany. The present upward movement in the stock market is the third of a series of fluctuations which have been noted since the present year began. On January 1 the stock market was still suffering from the shock of the Venezuelan disturbance, and early in January reached the lowest point which followed that event. This was succeeded by a general rally in prices, lasting until the close of February, from which stocks again receded until the last week in March, when a steadier tone asserted itself, followed by a gradual creeping up in the average quotations for active shares, which this week has grown into the positive bull movement already referred to. The character and extent of these movements are exhibited by the following tabulation:

	Lowest, January.	*Highest, February.*	*Lowest, March.*	*Highest, April.*
Atchison	12¾	17¾	14½	16½
Burlington	71¾	81⅞	73⅝	79¾
Chicago Gas	62	70	64½	99¾
General Electric	22	33⅜	30½	37¾
Louisville & Nash.	39⅞	55⅜	48⅝	52
Manhattan	96⅜	100	104	112¼
Missouri Pacific	22¾	25⅞	22¾	26½
Northwestern	94⅞	105½	101⅜	104¾
Rock Island	62	74¾	68½	72
St. Paul	63½	70⅜	73⅝	77⅛
Sugar	97	118⅝	113⅞	125⅞
Western Union	82¼	86⅞	82½	84⅝

The rise, founded as it is upon expectation rather than realities in regard to the revival of trade, and the belief that disturbing influences in connection with the country's foreign relations need no longer be an element of apprehension, has been powerfully reinforced by the improving tendency of American securities in London. In view, however, of the long absence of public support to speculative movements of this kind, there may be some question as to whether reactions are not likely to make themselves felt before the appreciation of values proceeds to any great length.

LATE WORLD'S WHEAT STOCKS TOTALS.

Australian stocks of available wheat, as cabled to BRADSTREET'S, amounted to 3,900,000 bushels on April 1, 1896, contrasted with 2,600,000 bushels on January 1 last. One year ago like supplies of wheat amounted to 9,300,000 bushels on April 1, and on January 1, 1895, to only 2,500,000 bushels. These figures tell the story of Australia's depleted supplies of wheat, due to reduced production. On January 1, 1895, Australian wheat supplies available were about what they were on January last, 2,500,000 bushels in the former and 2,600,000 bushels in the latter instance. But in the first quarter of 1895 available stocks in Australia nearly quadrupled, amounting to 9,300,000 by April 1. This year the 2,600,000 bushels of available Australian wheat on January 1 increased only 50 per cent. during the following three months, or to only 3,900,000 bushels. When these totals, together with specially reported and cabled Russian interior stocks of wheat out of producers' hands, are included with aggregates of available wheat supplies already made public in these columns, revised totals of world's available stocks of wheat are possessed of an added interest. Thus, total supplies of wheat out of producers' hands, and available for prompt shipment on demand, in the United States, both coasts, in the Dominion of Canada, afloat for Europe from all exporting countries, in store in Europe, including specially reported interior Russian stocks, and in Australia, as specially reported to BRADSTREET'S, amounted to about 156,075,000 on April 1, 1896, and, as contrasted with preceding dates, make the following showing:

April 1, 1896	156,075,000	April 1, 1895	187,004,000
January 1, 1896	187,773,000	January 1, 1895	204,853,000
October 1, 1895	146,590,000	October 1, 1894	175,706,000
July 1, 1895	146,677,000	July 1, 1894	164,319,000

From the foregoing it is perceived that while wheat supplies in America, Canada, afloat for and in Europe, and in Australia, decreased nearly 18,000,000 bushels in the first quarter of 1895, they decreased 31,698,000 bushels during January, February and March, 1896. The grand total on January 1, 1896, was 17,080,000 smaller than one year before, and on April 1, 1896, it was 30,929,000 bushels smaller.

NEW YORK'S ATTITUDE ON CONSOLIDATION.

The most important of the municipalities to be affected by the Greater New York bill has intimated to the legislature its refusal to accept the measure through the medium of a communication by Mayor Strong. In this attitude the chief executive officer of New York city follows in the steps of the mayor of Brooklyn. Mayor Strong, while remarking that the vote taken upon the subject of consolidation recently showed but a small proportion of the entire vote cast in the districts sought to be united, he is convinced that a large majority of the citizens of the metropolis favor a Greater New York. He points out that the arguments presented to him against the acceptance of the measure have borne more against the provisions of the pending bill than against consolidation as an end in itself. There should be, and will be, the mayor says, a Greater New York as the direct result of consolidation, and he desires to be distinctly understood as favoring such a consummation and in no wise opposing it, except in so far as the particular mode proposed of bringing about a union of the cities is concerned. As regards the expediency of a union of the municipalities, the mayor says that the commercial interests of New York demand consolidation; that the geographical location of the city and its natural facilities as a commerce point mark it as the metropolis of this continent; that its commercial and manufacturing interests will establish it as such, and that the very fact of a municipality so largely increased in population and boundaries will, of itself, advance the value of property, invite capital, enlarge commerce, and in innumerable other ways increase the potential power inherent in so large a community.

When it comes to a consideration of the method of accomplishing the general purpose, however, Mayor Strong suggests that the work should be brought about as a result of most careful investigation of existing conditions and conscientious inquiry regarding all the problems to be solved, both as to the best methods of administration and a wise guardianship of the property interests of the several communities to be brought together. From this point of view he declares it to be a reversal of the logical steps to be taken to first declare, as does the present bill, the legal consolidation of the territory named, and leave it to the future to bring about the methods of such consolidation. The provision of the bill appointing a commission to frame a charter and report the result of their labors to the legislature on or before February 1, 1897, does not, he thinks, provide a sufficient length of time during which the labors of any such commission, however wisely appointed, could accomplish the best results. Without doubt, he suggests, the legislature would be compelled, upon the request of the commission, to grant an extension of time for their deliberations, leading, possibly, to the establishment of commissions for the government of the territory projected, which would cause great confusion throughout the entire territory, and force the legislature to ultimately conclude their labors by compromises and combinations, or else leave the subject open for a number of years in such an unsettled condition of affairs that not only would proper administration be an impossibility, but property interests would be jeopardized and capital kept from the city rather than invited to its borders. In his view there should not be a time limit within which such a charter should be reported to the legislature.

While taking this view, the mayor does not adopt the idea of those who urge that the legislature should provide a commission to draft a charter for the district to be consolidated, which charter should be passed upon in its entirety by the people at the polls. Such a procedure, he thinks, does not follow precedent in the establishment of municipalities; but, on the contrary, he holds that the charter in contemplation can be best established by the action of the legislature, and that with less delay and confusion than would supervene were the mattter submitted to popular vote. Still he thinks that consolidation should not be finally decreed until the legislature adopts the charter finally uniting the sections to make up the Greater New York. As the result of his consideration of the whole question, he submits, with his non-acceptance of the provisions of the pending bill, the suggestion that a commission be appointed to report to the legislature, at the earliest possible moment consistent with conscientious and thorough study, a charter to cover a Greater New York, and that the adoption of that charter be left to the legislature.

The bill has been passed by the state Senate over the vetoes of the mayors, and its fate now rests with the Assembly, where the situation is more in doubt than it was in the upper House. A comparison of the vote upon the bill in the Senate with that cast when the bill came before that body originally shows that the veto messages changed some votes, several who voted in favor of the measure at first having voted against it on second consideration. A similar change of sentiment in the Assembly might result in the defeat of the bill, when, no doubt, another one based on different lines would be substituted, though probably too late for adoption by the present legislature.

VALIDITY OF GOLD COIN BONDS.

Gold coin is money, and under the grant by a legislature of a state of an authorization to issue bonds to borrow "money," bonds made payable in "gold coin" are valid. That is, in a nutshell, the substance of the decision rendered by the Supreme Court of the United States this week in a case which came up from Mississippi. This case arose upon a suit brought by Amos Woodruff, trustee, and the German Bank of Memphis, holders of certain bonds issued by the Mississippi Levee Board No. 1, to enforce a lien and trust upon certain lands in Hinds county, Mississippi, created in their favor as holders of such bonds. These bonds were issued in 1871 and were made payable in "gold coin," although the interest coupons were payable in "lawful money." The case was decided against the plaintiffs in the state courts, the Supreme Court of Mississippi affirming a judgment of the County Court against them.

In its decision the state Supreme Court declared that when the bonds were issued "gold coin" was not the basis of the business of the country. It was money, but of much greater value than the circulating medium, consisting of United States Treasury notes and of national bank notes. All debts payable in "dollars" generally were, as now, solvable in legal tenders, but, the court said, an obligation payable in gold coin can be discharged only according to its terms. In ordering the issuance of bonds for $1,000,000 and in the use of the term "money," the court held that the legislature must be supposed to have meant in the act cited that money which constituted the basis of the general business of the country and was a legal tender for the payment of debts, and that, therefore, there was no authority in the act for the issuance of bonds payable in "gold coin," and they were void for want of authority for their issuance. This, the court said, was a matter of substance involving a departure in a most material feature from the act authorizing bonds to be issued, and rendered them void from the beginning.

As has been intimated, this view has not been sustained by the Supreme Court of the United States. That court has reversed the decision of the Mississippi court, on the ground that "gold coin" was money, and that, therefore, the use of that term in a bond issued under authority to borrow money was not invalid. In deciding the case Chief Justice Fuller, who read the opinion, said that it was only by deciding that these bonds were payable in a particular kind of money of the United States, and that this kind, though money in law had ceased, as the court assumed, to be money in fact, that the state court was enabled to hold them void for want of power, and if that premise were incorrect the conclusion, whether right or wrong, would not follow. But the court said these bonds were not expressly payable in gold coin, and as the coupons were payable specifically in currency the argument was not unreasonable that the corporation intended the purchasers to expect payment in the money in which the indebtedness was stated to have been contracted; but the agreement to pay the designated sums did not specify any particular kind of money, and the obligation was to pay what the law recognized as money when the payment was to be made. The bonds were, therefore, legally solvable in the money of the United States, whatever its description, and not in any particular kind of money, and it was impossible to hold that they were void because of want of power.

A RAILROAD'S SEMI-CENTENNIAL.

Ceremonies of an appropriate nature attended the celebration at Philadelphia on last Monday of the fiftieth anniversary of the Pennsylvania Railroad Company's incorporation. The occasion was recognized in a fitting manner by the corporation, and a public meeting was held, dignified by the presence of the city and state officials, and by numerous guests prominent in railroad and business circles throughout the country. The local pride which Philadelphia and the state of Pennsylvania feel in this great corporation naturally found free expression in the addresses of the road's officials and of the other speakers. Nor were their utterances lacking in regard to pointing out and emphasizing the part which the Pennsylvania road has taken in the development of the present transportation system of the whole United States, and the high standard of management and methods it has maintained. In the latter respect, indeed, the company has long served as a model for other companies to follow, and admittedly stands in respect to the completeness of its physical details among the best managed railroads of the world. Moreover, in a financial sense the Pennsylvania's history offers a bright contrast to the mismanagement which in too many instances has brought opprobrium upon American railroad corporations; no scandals have marred its pages, while conservatism has guided its counsels in spite of the adherence to a policy of expansion which has brought under its control some 9,000 miles of lines, with an aggregate capitalization of over $800,000,000.

It is interesting to recount the steps by which the Pennsylvania acquired its preeminence in the American railroad world. The fact may also be noted that its original incorporation was the outcome of the failure of a system of transportation between the Delaware and the Ohio, built and operated by the state. This line was partly canal and partly railroad, inclined planes being used to surmount the steep gradients of the Alleghanies, a double track, known as the Columbia railroad, running from Philadelphia to the Susquehanna. This work was completed in 1834, costing about $14,000,000, but was never remunerative to the state, and the agitation for the building of a through railroad by the state was ineffective. Finally, private enterprise was appealed to, and in April, 1846, the act to incorporate the Pennsylvania Railroad was passed, the divisions from Harrisburg to Lewistown and from Pittsburgh to the Portage or inclined plane road being completed in 1852. In 1854 trains were first run through between Philadelphia and Pittsburgh without the use of the inclined planes, old state works being acquired in 1857 by purchase. Between 1862 and 1869 the company acquired, by purchase of controlling interests or lease, the Philadelphia & Erie, the Pittsburgh, Fort Wayne & Chicago, the Pan Handle and other lines, which constituted the nucleus of its western system, and in 1871 the United Railroads of New Jersey were leased, giving the company access to the city of New York. The Northern Central became part of its system at an early day, furnishing an approach to Baltimore, the Baltimore & Potomac carrying it to the national capital, while later on the Philadelphia, Wilmington & Baltimore road also passed into its possession. The mileage on January 1, 1896, by states, was as follows: New York, 106.11; New Jersey, 746.83; Pennsylvania, 3,253.68; Delaware, 238.28; Maryland, 394.96; District of Columbia, 8.15; Virginia, 44.50; West Virginia, 77.06; Ohio, 1,483.38; Indiana, 1,409.60; Illinois, 645.84; Michigan, 471.11; Kentucky, 2.91, the total being 8,882 miles.

It is another notable fact in the history of the Pennsylvania road that during its entire history it has had only three presidents, J. Edgar Thomson, Colonel Thomas A. Scott, and its present head, Mr. George B. Roberts. As was said by one of the speakers of the meeting in question: "It is the original and best working civil service organization in the country. The promotions are based absolutely on merit, and the best proof of this proposition lies in the fact that John Edgar Thomson commenced his professional career with the engineer corps employed upon the original survey of the road from Philadelphia to Columbia. Its second president, Colonel Thomas A. Scott, started as station agent in the village of Duncanville, and its present honored president began as a rodman in the engineering corps." In fact, this feature of its management alone constitutes a claim upon the entire public, no corporation in the world having a better system of promotions and presenting a more striking example of the advantages of a strict system of promotions based on merit.

A DEPARTMENT OF COMMERCE AND MANUFACTURES.

Evidently the ghost of the project to create a Department of Commerce and Manufactures, with its executive head as a member of the Cabinet, will not down. The latest advocate of the plan is the newly-organized National Association of Manufacturers, which is out with a circular advocating the passage of the Frye bill in the Senate, which seeks to have the commercial and industrial interests of the country specially represented by a member of the Cabinet.

The circular relates that lack of general appreciation of the necessity for such a department and absence of organized support are responsible for the failure of various efforts during the past ten years to provide for the establishment of such a federal department. It points out that with the extraordinarily rapid growth in the manufacturing interests of the country there has come a broader understanding of the importance of the suggested new government department, and a wider recognition of the necessity for its establishment. The crowding of additional functions upon the existing departments from time to time has also served to emphasize the need for measures of relief for the established executive branches of the government. At no time, however, has public interest in the creation of a Department of Manufactures and Commerce been so strongly marked and so emphatically expressed as at present, which is believed due to the active support given the present movement by several influential commercial and industrial organizations of national importance.

It is then pointed out that the idea of a Department of Commerce and Manufactures is not a new one.

"In 1891 the National Paint, Oil and Varnish Association instituted a movement for the establishment of a Department of Commerce, and the agitation has been continued by that organization with much effect. Other commercial bodies have discussed the subject in various forms, and within the past year the matter has assumed the importance of a well defined and strongly expressed demand for the creation of such a governmental branch. Hon. M. J. McEttrick, of Massachusetts, introduced in the House of Representatives on February 7, 1895, a bill to establish a Department of Trade and Commerce. This bill provided for the Cabinet office of Secretary of Trade and Commerce with a salary of $6,000 per year, a chief clerk at $3,500, and such other employees as might be necessary. It was provided by this bill that the secretary should perform all the duties incumbent upon the Secretary of the Treasury in relation to the trade and commerce of the United States, the aim being to relieve the Treasury Department of much of its irrelevant work.

"This bill was referred to the Committee on Interstate and Foreign Commerce. Owing to the limited time and the fact that there was no organized effort to push the matter, no hearing on the bill was given, and the measure died with the adjournment of Congress.

"The National Association of Manufacturers took up the subject of a Department of Manufactures and Commerce at its annual convention in Chicago on January 21, 22 and 23, 1896, and adopted resolutions in favor of such a department. Then the National Board of Trade at its annual convention in Washington, D. C., on January 28, 29 and 30, 1896, took similar action, and appointed a committee to urge the matter upon Congress. On March 9, 1896, Senator Frye introduced in the Senate a bill to establish the Department of Commerce and Manufactures, which embodies all the essential features of Representative McEttrick's measure and specifies the functions of the proposed department in greater detail."

Then follows a summary of the provisions of the Frye bill, which do not differ materially from those of the McEttrick bill, except that the salaries of the secretary and assistant secretary of the proposed department are put at $8,000 and $4,000 respectively.

It is further stated that the Treasury Department is at present much overcrowded, and that some of its bureaus, as well as some in the Department of State, may, with advantage, be transferred to the proposed new department. Among the bureaus referred to are the Consular Bureau, the Bureau of Statistics, and the various services connected with navigation.

As pointed out, also, the relative importance of agriculture and manufactures is not well understood and appreciated. "Agriculture is popularly believed to be in every way the larger interest, but statistics show that this is an erroneous impression. Including the valuation of all the farming lands, both unimproved and cultivated, agriculture shows a much greater investment of capital than manufacturing industries; but this is hardly a fair basis of comparison, as so much of the value of farm lands in some sections of the country is nominal rather than actual. But even without making allowance for this, the aggregate capital invested in manufacturing operations has increased at a more rapid rate than the increase in the value of farming property during the past forty years."

The following census figures are quoted as illustrating this claim:

CAPITAL INVESTED.

Years.	*Agriculture.*	*Manufactures.*
1850	$3,967,343,580	$533,245,351
1860	7,980,493,063	1,009,855,715
1870	8,599,966,998	1,694,567,015
1880	12,104,001,538	2,780,766,805
1890	15,982,267,689	6,139,397,785

This indicates that while the amount of money invested in agriculture has increased fourfold during the forty years, the capital invested in manufacturing enterprises has been multiplied nearly twelve times in the same period.

Half a century ago the aggregate value of all the products of manufacturing industries in the United States "was only five-eighths of the value of the agricultural products. The growth of industry has been so rapid, however, that manufacturing outstripped farming thirty years ago, and the last census showed that the value of manufactured articles was more than three times the value of all that agriculture yielded." The figures for fifty years are given as follows:

VALUE OF PRODUCTS.

Years.	*Agriculture.*	*Manufactures.*
1840	$800,000,000	$500,000,000
1850	1,326,691,326	1,019,106,616
1860	1,750,000,000	1,885,861,676
1870	1,958,030,927	3,385,860,354
1880	2,212,540,927	5,349,191,458
1890	2,400,107,454	9,056,764,996

FOREIGN TRADE FOR THREE QUARTERS.

Preliminary figures of the foreign trade of the United States for the month of March and the nine months ending therewith have just been issued by the Bureau of Statistics of the Treasury Department. The statistics are corrected to April 14. According to the figures the exports of merchandise for the month of March were valued at $75,527,954, which represented an increase of over $10,300,000 as compared with the corresponding month of last year. The imports for the month, on the other hand, were valued at $66,383,938, which represents a decrease of over $2,900,000 as compared with the corresponding month of last year. Of the imports, the dutiable exceeded the non-dutiable by over $4,400,000, as compared with an excess of about $3,500,000 for the month of March, 1895. The exports exceeded the imports by $9,144,016 in March last, while in March, 1895, there was an excess of imports amounting to $4,133,646.

For the nine months' period ending with March the total exports of merchandise were valued at $678,083,462, which represented an increase of nearly $53,000,000 as compared with the corresponding period of 1895. The imports, on the other hand, were valued at $607,589,804, an increase of over $72,000,000 as compared with the corresponding period of last year. The dutiable goods exceeded in value those free of duty by over $25,000,000 in the nine months ending with March, whereas in the corresponding nine months of the preceding

fiscal year the duty-free showed a nominal excess over the dutiable goods. The exports exceeded the imports in both periods, the excess amounting to $70,493,658 in the last three quarters, and to $87,518,406 in the nine months ending with March, 1895.

The movement of gold coin and bullion was very much less in March, 1896, than in the corresponding month of 1895. The exports amounted to $384,080 in March last, as compared with $3,126,095 in March, 1895, while the imports amounted to $677,733 in March last, as compared with $7,246,384 in March, 1895. For the nine months the exports of gold were valued at $82,507,891, an increase of nearly $21,000,000 as compared with the corresponding period of the preceding fiscal year. The imports, on the other hand, were valued at $29,158,552, which represents an increase of a little less than $5,900,000 as compared with the corresponding period of the preceding fiscal year. Exports showed an excess in both periods, the excess amounting to $53,349,339 in the nine months ending with last March, and to $38,249,153 in the nine months ending in March, 1895. The above figures do not include those for gold ore, which were relatively insignificant, the exports for the nine months amounting to only $74,893 and the imports to only $1,384,565. The exports of silver coin and bullion for the nine months amounted to $45,216,070 and the imports to $10,796,666, increases respectively of nearly $11,300,000 and of over $3,900,000 as compared with the corresponding items for the nine months ending with March, 1895. The exports were in excess during both periods, the excess amounting to $34,419,404 in the nine months ending with March, 1896, and to $27,102,021 for the nine months ending with March, 1895. The exports of silver ore for the nine months just completed amounted to $532,874 and the imports to $11,063,348, which represented increases of over $500,000 and over $3,600,000 as compared with the corresponding items for the nine months ending with March, 1895.

IRON AND STEEL COMBINATIONS.

In view of the prominence recently given the attempt of makers of steel billets in this country to form a pool and apportion the output among the mills in order to check production; in view of what are described as the steel rail, wire rod and the bar iron pools in our leading metal industries, it is of interest to note that this movement is not peculiar to the industries of our own country. For a number of years, not only here but abroad there has been an increasing disposition to attempt to regulate prices and production of iron and steel products by combination. The London *Iron and Coal Trades Review* refers to this tendency quite at length, pointing out how it has of late taken the form of restriction and allotments of production, with fines for violation of agreement to abide by the allotments, which reminds one promptly of published outlines of the steel billet pool recently formed in the United States. But there appears to be no special centralization of this phenomenon in this country. There are a number of such combinations in Germany, and France possesses, perhaps, the most ingenious and binding scheme yet devised to enable manufacturers to control the output and the price.

In France twenty-three makers of structural iron and steel have just completed a pool. The individual concerns have signed an agreement with a new company called Le Comptoir Général des Poutrelles, at Paris, by which the works agree to deliver all their iron and steel rolling-mill products in the line of beams, bars, angles, channels and such shapes, which are to be subsequently worked by drilling, milling, enameling, etc. No one is permitted to carry, receive or deliver orders direct to consumers. Only the requirements of the French state departments are excepted. The syndicate provides for the sale of the products, and therefore buys the entire product of the different works for resale. Each of the works is allotted a certain tonnage. Those works which do not carry out their orders are subject to an export tax. The works are relieved from this when their plant is placed out of power to produce by "the will of God," boiler explosions, breakage of machinery, strikes, etc. The works need not furnish the syndicate any other sections but those arranged for at the time of the formation of the syndicate.

The sales territory is divided into zones, and the general assembly decides every month what the selling price for each zone shall be and the price at the works at which the different plants must deliver the base sizes. The board sends an account monthly of the sales made and a general statement of the extras to be paid to the different works. Dividing this total figure by the tonnage of the month yields the base figure of the preceding month, which, in turn, is used by the general assembly as a guide in determining the base price paid to the individual works for the succeeding month.

All products bear the mark of the works where made, the concern being responsible for the quality and accuracy. This combination has been made by contract for a period of five years, beginning March 1, 1896, to end December 31, 1900. Beginning March 1, the syndicate takes over for its own account all unfilled contracts of the members, who must provide for the delivery of the materials. During the life of the contract members are not allowed to make any sales or to speculate within the sales district of the syndicate.

This pool, or combination, is in its essential features on all fours with the pool that was organized in the British steel-rail trade some years ago, with the difference that the latter was international in its scope. The paper named thinks "it might be possible to arrange a similar combination for the beam and girder industries of Germany, Belgium and England." In that event representative British firms would, it says, be "doing a more lucrative business than they are ever likely to do while fighting Belgium and Germany in neutral markets."

COMPETITION FROM EGYPTIAN COTTON.

There seems to be a steadily enlarging demand for Egyptian cotton in this country, judging by the statistics of Alexandria shipments to the United States. Ten years ago only 3,815 bales of Egyptian cotton, less than 1 per cent. of the crop, were shipped here, whereas the shipments for 1895–96 are estimated by the American consul-general at Cairo at 50,000 bales—over 7 per cent. An Egyptian bale, it should be remembered, weighs 750 pounds, or about one and one-half times an average American bale, so that the 50,000 Egyptian bales equal 75,000 American bales in weight, while superior to the ordinary short staple American cotton, comparable only to the sea-island variety for length of fiber. Just how important the import of Egpytian cotton into this country has become may be gathered from the fact that the estimated import this year will, if realized, fully equal the total production of sea-island cotton in the United States last season, the heaviest on record.

The statistical history of the rise of cotton culture in Egypt, and the marvelous increase in America's consumption of that fiber during the past ten years, is told in the following table:

Season.	Bales—Quantity produced.	Bales—Shipped to United States.	Equal to American bales of 500 lbs.
1885–86	406,000	3,815	5,722
1886–87	417,000	4,700	7,050
1887–88	411,000	5,792	8,688
1888–89	389,000	8,430	12,645
1889–90	427,168	10,470	15,235
1890–91	538,003	23,790	35,685
1891–92	612,025	27,739	41,608
1892–93	680,085	42,475	63,712
1893–94	631,000	33,606	46,409
1894–95	639,582	44,554	66,831
1895–96 (estimated)	691,333	50,000	75,000

American quotations regulate the price of Egyptian cotton, according to the consul-general. The price for high-grade cotton in Alexandria is usually 2c. a pound in excess of the price for good American upland cotton. New York and New Orleans quotations, he says, are posted several times each day on the Alexandria bourse and govern every transaction.

That long-fiber cotton is the staple of the future, says the consul, is proved by the important value placed upon that of the Nile country by every manufacturing nation of the universe. The demand for it is growing with astonishing rapidity, and overproduction is an unlikely contingent. The 1895–96 crop was the largest ever raised in Egypt, and was of fine quality. The previous season's area of about 1,100,000 acres was not added to, owing to low prices resulting from the enormous harvest in the United States. The outlook favors a larger area being devoted to cotton in Egypt this year, according to the consul, who says: "Everybody has an abundance of money, and the planter, whether pasha or fellah, sees a short cut to wealth by way of the cotton fields. Another season may see a lower price, but it will be 2c. a pound more than the United States quotation. 'Gilt-edge' cotton is supporting the Egyptian government, paying the interest on the enormous debt owing to European creditors—in fact, doing more for the regeneration of the land of the Pharaohs than all other influences and agencies combined. It is tenfold more responsible for the present prosperity of Egypt than the British 'occupation,' and is bringing $60,000,000 in ready money this season to a country that feeds itself and exports cereals enough to keep a million more people."

Naturally enough, the consul-general makes the inquiry as to why American planters should not try to compete with Egyptian growers for a share in this profitable trade in long staple cotton, and he suggests that the bottom lands of the Mississippi valley offer analogous conditions to those of the Nile delta. He says: "I feel that I cannot too frequently reiterate the opinion that American cotton growers should not permit themselves to be outdone by any country, or believe that any soil, even Egypt's, is possessed of miraculous qualities. I am aware that in some states experiments have been made with Egyptian seed bought in the open market in Alexandria and distributed by the Department of Agriculture, and that the results not having been encouraging, the project has been dropped. It would be logical, in buying test seed in Egypt, not to have the seller know it was going to America. Even Egyptians and Alexandrian brokers possess the instinct of self-preservation. A practical way to obtain prime seed would be to have it purchased at the ginning establishments without revealing its destination or purpose. A representative visiting the gins and finding a superior lot of cotton, could buy the seed and superintend its packing and shipment, independent of outside assistance. As in the United States, there are many kinds of cottonseed in Egypt, good and bad."

A possibly good opening for American cotton oil mill machinery in Egypt is pointed out by Consul-General Penfield. Seven-eighths of all the Egyptian seed goes to England, mostly to Hull. There are few oil mills in Egypt, and these are antiquated affairs. He says: "It is surprising that oil making is not more largely carried on in Egypt, it being a reasonable supposition that in freights alone the saving in sending the products of the seed to European markets would be enormous. From Alexandria it is but a few hundred miles to southern European ports in the olive-growing region, where, it is alleged, American cotton oil is extensively used.

"Egyptian seed is black and almost free from lint, and very rich, so much so that it sells for a fancy price—from $20 to $25 a ton. It would seem that two or three large mills, equipped with up-to-date American machinery and under American management, could not fail to prosper. Labor is plentiful, fairly intelligent, and costs much less than in America or England. The ginning establishments are well grouped in the delta, from forty to seventy miles from Alexandria, and water transportation competes with railways everywhere."

MINERAL PRODUCTION OF THE UNITED STATES.

With its accustomed enterprise, our esteemed contemporary, the *Engineering and Mining Journal*, presents its usual annual report of the total mineral and metal products of the country for 1895. For that year their total value is given at $673,881,505, the increase over 1894 being $95,411,447, or 16 per cent. It is interesting to note that in many instances the value of the annual production was the highest on record. As a gold producer the United States rose to first place, the total value of the output being 2,265,612 fine ounces, valued at $46,830,200, an increase over 1894 of $7,068,995. The domestic silver product last year was 46,331,235 ounces, valued (commercially) at $30,254,296, a decrease of 3,515,640 ounces from the year before, about 7 per cent. As a pig iron producer the United States also ranked first with 9,446,308 long tons, 1,900,000 tons more than were turned out by the United Kingdom in 1895, 3,600,000 tons more than the product of German furnaces, and 2,788,920 tons more than were produced in the United States in 1894. Coal production in this country was also very large, 196,442,451 short tons of anthracite and bituminous, 26,566,670 tons more than in 1894, and nearly as much as was mined in the United Kingdom.

The increase in the output of anthracite coal was small, 995,105 short tons, but the gain in the production of bituminous coal last year was about 7,381,000 tons. The production of coke also appreciated, the total output being 9,927,348 short tons, a gain of more than 1,500,000 tons, nearly 18 per cent. Products of coke and coal industries, as shown in the compilation, form by

far the most conspicuous among allied lines in the seventy instances enumerated in point of view of value, the total for 1895 being given at $230,697,122, or $33,314,183 more than in 1894, an increase of 17 per cent. The relative importance of the products of this industry may be inferred from the total values. Thus, while the anthracite coal industry produced in weight only about 40 per cent. as much as the bituminous, the value of the former constituted 54 per cent. of the total value of the coal and coke products, while the value of bituminous product constituted 40 per cent.

The output of crude petroleum in the last calendar year amounted to 50,652,025 barrels of 42 gallons each, a little more than 2,100,000 barrels in excess of the production in the preceding year, a gain of about 4 per cent. The value of this output for 1895 is given at $42,547,701, compared with $40,762,962 the year before, an increase of less than $2,000,000, not quite 5 per cent. Next in importance from the point of view of value of the total product is the production of lime, estimated at 60,000,000 barrels of 200 pounds each, compared with 56,750,000 barrels the year before, a gain of about 5 per cent. The value of the lime product last year is placed at about $30,000,000, compared with $28,375,000 the year before. The domestic production of iron ore in 1895 is given at 16,950,000 long tons, a gain of nearly one-half. The value of this product increased in about the same ratio, the total being $29,662,500, against $20,790,000 the year before. There was also an important gain in the production of white lead, 92,000 short tons against 87,242 in 1894, valued at $8,740,000 last year as compared with $8,445,000 in the year before. Prominent in the list of non-metallic mineral products, also, are 7,694,000 barrels, of 300 pounds each, of natural hydraulic cement, valued at $4,597,000, an increase of about $150,000 compared with the year before, and the output of refractory clay, estimated at 3,750,000 short tons in 1895, valued at $4,500,000, these totals showing a very moderate increase in output as compared with 1894, but a gain in value of product amounting tc $450,000, or about 10 per cent.

The exhibit as to natural gas production (among the non-metallic minerals) states that its value in 1895 was $12,000,000, compared with $13,000,000 the year before. The output of evaporated salt last year was 12,521,000 barrels of 280 pounds, compared with about 700,000 fewer barrels produced the year before, at a total valuation of $5,586,000 in 1895, or $230,000 less than in 1894. The production of marble was 6,942,000 cubic feet, nearly 10 per cent. more than in the year before, valued at $4,086,000, a gain of more than 10 per cent. Aside from quantities of silica, sand, quartz, slate and limestone, "other building stones" produced last year were valued at $33,000,000, an increase of $3,000,000, or 10 per cent.

Among metallic minerals not previously referred to, it is found that the output of copper was 386,453,000 pounds, an increase of 32,949,000 pounds, nearly 10 per cent., while the total valuation of the product was $36,944,000, about $3,400,000 in excess of the total valuation in 1894, a gain of fully 10 per cent. The production of lead is given at 156,854 short tons, a decrease of 4,000 tons compared with the year before, 2.5 per cent., the total value this year being $10,132,000, or $453,000 less than the year before, a falling off of between 4 and 5 per cent.

An examination of the extended tabular exhibit in the columns of our contemporary would indicate something in the nature of a revival last year in our mineral and mining industries. Not the least significant are the sharp gains in the production of gold and of pig iron, together with a reduction in the output of the white metal.

GREAT BRITAIN'S MEAT SUPPLIES.

So much has been written about the dependence of Great Britain upon other countries for its supplies of cereals that the uninitiated might have imagined this the only direction in which danger of interruption by war might be looked for. While undoubtedly among the most important items of British imports, however, grain and flour are far from being the only necessaries of life which it is found advisable to seek supplies of abroad. Great Britain imports vast supplies of salted meats, butter and its substitutes, cheese, fruits, eggs, potatoes, raw sugar, and, in fact, is a customer, as is well known, for every grade and variety of food product, wherever grown.

As is pointed out in a recent article in the Glasgow *Herald*, it is not alone, however, in that list of articles that interruption by war would exercise an unfavorable effect. It is probably a fact that no other nation in the world, except the United States, consumes such a large quantity of meat products of all kinds as does Great Britain. So far as can be gathered from the statistics, the cutting off of the meat supply of Great Britain would be second in seriousness only to the stoppage of the supplies of grain and flour. The statement is made, and apparently backed, that nearly one-third of the beef and mutton consumed in Great Britain is imported. The following table represents the consumption per head, in pounds, of domestic and imported beef and mutton during each year for thirteen years past:

	Pounds		
Year.	*Home meat.*	*Imported meat.*	*Total consump.*
1883	61.9	15.5	77.4
1884	63.5	14.2	77.7
1885	65.3	12.9	78.2
1886	64.0	12.2	76.2
1887	62.9	11.5	74.4
1888	60.6	13.8	74.4
1889	60.5	19.3	79.8
1890	63.4	22.9	86.3
1891	66.5	20.3	86.8
1892	66.5	21.4	87.9
1893	63.5	18.0	81.5
1894	60.3	23.2	83.5
1895	59.2	23.5	82.7

The consumption of British beef and mutton in 1895, it will be seen by this table, was more than 59 pounds per head of population, while the consumption of imported meat was 23½ pounds, or a total of 82.7 pounds per capita. The increasing dependence of Great Britain upon outside sources for its meat supplies is also shown in the above table by the increase in the consumption of imported meat year by year, while the consumption of domestic meat in 1895 was the smallest of any year recorded since 1883. The variation in the consumption per head is explained partly by weather conditions and partly by wages, while the large increase per capita within the last ten years was due not merely to the greater spending power of the people, but also to the enlargement of cheap supplies from abroad by means of the refrigerating process. It is worth noting, in this connection, that 13 per cent. of the entire British imports of meat come from the United States, and 10 per cent. from Australia and New Zealand.

The immense growth in the frozen meat industry of late years is the most prominent feature in the present situation of the British meat supply. The daily sales in the United Kingdom now exceed the whole year's import in 1881. The total imports of frozen beef and mutton combined, in 1895, were 148,384 tons, or 8.48 pounds per head of population, against only 23,366 tons, or 1.45 pounds per head, in 1885. The most notable feature in the frozen meat trade has been the immense increase in the receipts from Australia and New Zealand. So far as can be judged, there is no limit to the possible extension of this trade. Of late years the possibility of importing live stock from the British colonies has been agitated, and it is pointed out in the article that South America and Australia may, in time, supersede the United States as a supplier of meat to the United Kingdom, while the possibly great future of South Africa as a meat producer is also hinted at. The United States is, as yet, the most important single shipper of live cattle and sheep to the United Kingdom, as it is also of chilled meat, as the following tables will indicate:

LIVE CATTLE AND SHEEP IMPORTS.

CHILLED AND FROZEN BEEF IMPORTS.

	Hundred weights						
Year	*From Queensland.*	*From N.S.W. & Vic.*	*From New Zeal'd.*	*From River Plate.*	*From United States.*	*From Canada.*	*From continent.*
1888	....	864	40,470	3,678	784,429	93	7,105
1889	24,515	350	75,131	8,625	1,275,948	148	995
1890	20,799	627	88,495	8,933	1,693,148	27,911	14,680
1891	40,850	765	107,433	14,485	1,747,578	287	9,113
1892	54,000	2,568	62,065	8,309	1,951,887	154	654
1893	206,783	4,200	14,706	35,383	1,489,949	84	56,947
1894	286,806	15,090	2,617	5,279	1,775,528	40	18,705
1895	322,000	127,000	15,000	25,000	1,652,000	9,000	8,000

Owing to the restrictions which, for sanitary or other reasons, are now placed on importations of live stock in the United Kingdom, the trade in dead meat, whether frozen or chilled, has opportunities of almost indefinite expansion, and, says the Glasgow *Herald*, "so large is the trade already that in London refrigerated storage accommodation exists ample enough to hold 1,000,000 sheep, while the combined storage capacity of Liverpool, Manchester and Cardiff should be equal to nearly another million. This is an important matter should we be unfortunate enough to go to war with a maritime power."

There are now engaged in the London and New Zealand meat-carrying trade 4 sailing vessels and 28 steamers fitted with refrigerating chambers, whose carrying capacity is about 1,500,000 carcasses per voyage. In the combined Australian and New Zealand trade there are 11, and in the exclusively Australian trade there are 41 steamers so fitted, with an aggregate carrying capacity of over 1,500,000 carcasses per voyage, and in the River Plate trade there are 24 steamers engaged, with a carrying capacity of over 730,000 carcasses per voyage. This is a total of 108 vessels now engaged specially in carrying frozen meat to Great Britain from Australasia and South America, and it is estimated that their maximum importing capacity is nearly 9,000,000 carcasses per annum. This is altogether irrespective of the transatlantic liners, which regularly carry American beef in a chilled (not frozen) condition.

The increase of this trade in meat has had a serious effect upon the domestic cattle-raising industry. The number of domestic cattle in 1895 was 10,753,314, while the number of sheep and lambs in 1895 was only 29,774,853, the smallest since the year 1889.

BURLINGTON'S ANNUAL REPORT.

The conditions which for several years past have affected the business and earnings of western railroad properties necessarily fell with more than ordinary severity upon the Chicago, Burlington & Quincy. For this reason its annual statements for several years past must be considered with some allowance for the circumstances in question. It is, nevertheless, a suggestive fact that the share capital of this great corporation, which once ranked as an investment security, has of late years passed into the category of the speculative stocks in the Wall street market. Having yielded during the preceding decade to the tendency, from which none of the large western railroads were exempt, to extend its lines, with a corresponding increase in the capitalization, it has been impossible for the company to escape the disagreeable consequences of years when poor crops diminished business, and low rates, to say nothing of extraordinary competition, have combined to reduce the proportionate return upon the capital invested in railroads.

The report of the company for 1895 has just been made public. Wall street has taken it in an unfavorable light, although it cannot be said that the figures presented have been used with any success by the stock market bears. The comparison of revenue and disbursement for the year under consideration with those of 1894 is as follows:

Years.	1895.	1894.	*Changes.*	
Gross earnings	$24,874,192	$24,667,132	Inc.	$207,060
Operating expenses	16,710,539	16,284,065	Inc.	426,474
Net earnings	$8,163,653	$8,383,067	Dec.	$219,414
Other income	1,956,635	1,938,852	Inc.	17,783
Net income	$10,120,288	$10,321,919	Dec.	$201,631
Fixed charges	7,562,730	7,530,788	Inc.	31,942
Balance	$2,557,558	$2,791,131	Dec.	$233,573
Dividends	3,280,108	3,895,128	Dec.	615,020
Deficit	$722,550	$1,103,997	Dec.	$307,921
Land receipts	...	73,526	Dec.	73,526
Extra div. H. & St. Joe.	490,188	....	Inc.	490,188
Net deficit	$232,362	$1,030,471	Dec.	$798,109

The striking feature is that while so many of the railroads in the west exhibit a comparatively fair increase of gross earnings during 1895, the Burlington presents a gain of only $207,000. This, however, is susceptible of explanation. Not only did the Burlington share in the effects of depression in business and agriculture which existed during the first half of 1895, but its dependence in a large measure upon the traffic of a corn-growing country rendered the exceedingly low prices of that staple during the autumn and early winter, and the exceptionally slow movement of the crop to market, an exceedingly unfavorable factor in its business. It should also be noted that the mileage of the lines from which the gross earnings were derived increased 105 miles. Reduced to a mileage basis, the results are, therefore, even more unfavorable. In 1895 the 5,731 miles, whose figures are given above, yielded gross earnings of $4,341, against $4,384 per mile from the 5,626 miles operated in 1894, this again comparing with gross earnings per mile of $6,043 per mile from 5,461 miles in 1892. Here we have a striking exhibition of the influence of large crops and an active movement of traffic throughout the corn belt upon the Burlington's revenue, its reverse being shown in the discouraging results of

the year just ended. The increase in operating expenses by $426,000 is not to be severely criticised, in view of the fact that the Burlington management was a leader in the tendency to cut down operating cost to the very utmost, which in its case excited no little unfavorable comment during 1894. Reduced to a mileage basis, it is shown that last year the Burlington operated its lines at a cost of $2,916 per mile, against $2,894 per mile in 1894, while in its last prosperous year, 1892, the cost per mile was no less than $4,114. The net earnings for 1895 accordingly show a decrease of $201,000, while the fixed charges increase $31,943, the situation being met by a reduction of dividends amounting in the aggregate to $615,000. By this means the deficit under dividends paid is reduced from $1,103,997 in 1894 to $722,550 in 1895. An extra dividend of $490,188, received from the company's holdings of Hannibal & St. Joe stock, reduces the net deficit for the year just ending to $232,362, or $798,109 less than the deficit after dividends in the preceding year. It may also be remarked that the average rate per ton per mile received upon the traffic moved fell from 9.11 mills to 8.86 mills per mile, indicating the extent to which unfavorable rate conditions entered into the results just shown. Considered in its general bearings, the Burlington property has passed through another year of exceedingly unfavorable conditions, which the report in no way minimizes.

RUSSIAN CURRENCY REFORM.

Later advices would indicate that the market here labored under a mistake in concluding that the recent withdrawals of gold from this country on "special orders" were effected under arrangements on behalf of the Russian Treasury, and had reference to the proposed establishment of the currency of the empire on a gold basis. The $2,000,000 gold shipped to Germany by a prominent international banking house during the past fortnight has been taken under circumstances which indicate that some interest on the other side was offering a slight inducement for such consignments, or was in a position to pay more for the gold than would accrue to shippers under ordinary conditions. It now seems that there is a scarcity of gold in Germany itself, creating a demand which would fully account for the transactions in question. It also appears that the Russian Treasury has actually no immediate intention of establishing a metallic currency. This may be merely a postponement, but the principal European authorities on finance are of the opinion that the difficulties in the way of carrying out such a plan were too great to be overcome, at the moment, anyhow. As was natural, the prospect of a revolution in the Russian monetary system created a great deal of nervous anxiety in the leading European markets, and was reflected to some extent here. Indeed, the idea at once prevailed that, as was the case when Austro-Hungary instituted its financial reforms, the bankers intrusted with the task of providing gold for the purpose would again take advantage of our currency laws, and of the comparatively greater ease they present for securing large amounts of the metal from our Treasury, to draw the largest portion of the requisite fund hence.

The details of the plan which was contemplated by the Russian government were given recently by a well informed correspondent of the London *Times* at St. Petersburg. According to this authority, the financial reform was to consist "in the coining of new gold pieces which will exactly correspond in value with the paper ruble—that is to say, a 10-ruble gold coin which has hitherto been worth 15 rubles paper will henceforth be made smaller, so as to equal 10 rubles paper, no more and no less. Thus the currency of Russia becomes a gold one, as no more paper is to be issued by the State Bank on account of the exchequer, but only for its own commercial purposes, as in the case of the Banks of England and France, and then only up to one milliard rubles on condition that one-half of the amount so issued up to a milliard be covered by gold, and that above a milliard it be completely covered by its full gold equivalent. The old gold coins, which are worth 1 ruble 50 kopeks in paper, according to the latest decision of the Finance Minister, will be worth the same in the new gold coinage until withdrawn, so that, according to the promoters of this important reform, no one will lose anything by it, and all loans and obligations will remain the same until further legislation. The paper will be taken for gold in the new coinage, ruble for ruble, and the State Bank will receive 750,000,000 in the new gold piece for the purpose. The silver ruble will be compulsory, if required, between private persons only up to fifty rubles, while the exchequer will receive it to any amount. Only in the payment of customs duties silver coinage will not be received above one ruble until further notice."

This, it will be seen, is rather far from a resumption of gold payments. The London *Statist*, in commenting on it, says: "What it (the Russian Treasury) really is doing is simply continuing a policy it has been pursuing for several years. The Imperial Bank of Russia is merely a department of the Russian Treasury. It has no shareholders, and therefore no paid-up capital. For nearly half a century specie payments have been suspended, and the currency consists of notes of the Imperial Bank. Just before the outbreak of the Russo-Turkish war the notes in circulation amounted to a little over 780,000,000 rubles. During the war there was an additional issue of 417,000,000 rubles. A couple of years later, however, the Treasury ordered the bank to withdraw this war issue. As a matter of fact, it withdrew the greater part, but it did not cancel the notes as instructed, and there still remain about 266,250,000 rubles of this issue. Lastly, during the late famine there was another issue of 75,000,000 rubles, so that the total currency of all denominations amounts to 1,121,250,000 rubles. Gradually the government has been accumulating gold in the Imperial Bank. As our readers know, the customs duties are paid in gold, and a portion of the various conversion loans raised in France was also set aside to form a great war-chest. Altogether, Russia holds over 100,000,000 sterling in gold, and of this sum she has from time to time paid in portions to the Imperial Bank, specially allocating these sums as a reserve against the note issues. Now a ukase has been published ordering 75,000,000 gold rubles to be transferred to this reserve fund, which, it is stated, will raise the fund to a total of 500,000,000 gold rubles. The paper ruble is worth only two-thirds of the gold ruble, consequently the 500,000,000 gold rubles are equal to 750,000,000 paper rubles. So that out of the total of 1,121,250,000 rubles of notes there are only about 371,250,000 of rubles uncovered by gold. It is undoubtedly a very strong position. If Russia were a peaceful country, devoting herself to the development of her resources and carefully abstaining from adventures abroad, she would clearly be able to resume specie payments now—indeed, she could have done so years since."

How far the operations of the Russian government will affect the demand for gold and be reflected in a further artificial drain upon our gold resources is, therefore, a question for the future to decide. The matter, however, is only a fresh illustration of the unfavorable position in which we are placed by the present disorganized condition of the currency and the failure of the legislative branch of our government to provide adequate remedies for a situation which, at any time, exposes us to dangers of this grave nature.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

Stocks of wheat in St. Louis private elevators on April 1 amounted to 470,000 bushels.

The House of Representatives has passed by a heavy majority the bill placing what is known as filled cheese on the same footing as oleomargarine, by taxing its manufacture and sale and imposing penalties for violations of the provisions of the measure.

A further examination of the plan of reorganization of the Northern Pacific Railroad Company suggests some points with reference to the basis of exchange of the general first mortgage bonds not included in such analyses of the plan as the press of the country have thus far given. It is of interest to know while it is not in precisely the terms of the advertisements with which American newspapers have been filled, that for each of the general first mortgage Northern Pacific bonds tendered in exchange, there will be given in exchange $1,350 4 per cent. new prior lien 100-year gold bonds, which are to pay interest quarterly from July 1, 1896, and that, in addition to the larger amount of new prior lien bonds, there will be given $30 in cash immediately on the deposit of each $1,000 general first mortgage Northern Pacific bonds, which will cover the coupon due July 1 next. Here is an increase offered in exchange of more than one-third in the nominal value of the bonds. But this does not appear to be all. The old Northern Pacific first mortgage bonds cover 2,152 miles of main line after the Pend d'Oreille and Missouri River Divisional mortgages, which precede them, and the St. Paul & Northern Pacific bonds, which will be included in the new prior lien mortgage, which together require annually $4,000,000. Thus it will be seen that the new prior lien bonds, besides being more than one-third larger in face value than the general first mortgage bonds for which they are offered, are in addition to become a first lien on the Northern Pacific system—4,706 miles—requiring for their service only $4,370,000 annually, an increase of only $373,000. Bonds prior to the first mortgage bonds are to be paid off in cash at par, and prior lien bondholders will then have a lien on the entire Northern Pacific system (not merely on a part of the main lines, irrespective of feeders and terminals), with nothing between them and the actual property. It is stated that the principal London Stock Exchange houses that make a specialty of American railroad bonds recommend this conversion, and that the three banking firms that originally issued the bonds join in the recommendation.

CURRENT BUSINESS NEWS.

Industrial.

All master painters of Boston and its neighborhood have been officially notified that the painters' and decorators' unions of that city have unanimously voted that on and after May 1 eight hours shall constitute a day's work. Most of the employers are now working on that basis.

Ship and engine builders have effected a temporary organization "to promote legislation that will give to American ships the carriage of American commerce." Arthur Sewall, of Bath, Me., was elected president; H. T. Gause, of Wilmington, Del., vice-president; A. R. Smith, of New York, secretary, and General T. W. Hyde, of Bath, treasurer.

An Indianapolis dispatch says that, owing to the refusal of the National League of Musicians to affiliate with the American Federation of Labor, those voting affirmatively have decided to form a new National League.

At Canal Dover, Ohio, about 1,000 employees of the Reeves Iron Company and the American Tinplate Manufacturing Company have struck because of the discharge of two rollers in the tinplate department.

The foundry interests of the country are to hold their first national meeting in Philadelphia on May 12, 13 and 14. This was called by the Western Association to bring about a more friendly feeling among foundrymen, to present and discuss papers on subjects interesting to the trade, and to encourage the formation of foundry associations in every part of the United States.

Southern iron continues in demand. "The combination among large producers has made prices firmer, and an advance averaging 25c. per ton for the various grades of iron is reported at Birmingham."

The Waterbury Watch Company recently cut down the number of the employees from 500 to 290, and reduced the daily output of the work from 1,700 to 1,000 watches.

The annual convention of the United Mine Workers of America opened at Columbus, Ohio, April 14, with about 100 delegates, representing miners in nearly every state in the Union where coal mining is carried on in a large way. They have 183 votes.

The Ohio Steel Company has resumed operations at its plant in Youngstown, the order for a reduction in wages having been withdrawn.

A general suspension of operations in the window glass factories in Pennsylvania, Ohio and Indiana is said to be contemplated.

About 1,000 engineers from the several divisions of the Brotherhood of Locomotive Engineers on the Erie, Jersey Central, West Shore, Delaware, Lackawanna & Western, Erie & Wyoming Valley and Fall Brook railroads, and all the elevated railroads of New York city, held a union meeting in Port Jervis, N. Y., within the week. Addresses were made by Chief Arthur, of the Brotherhood, and others.

The coming national convention of the Amalgamated Association of Iron and Steel Workers is looked forward to with interest. The conditions of trade generally all point to the importance of the convention.

San Francisco reports an unprecedented exodus of miners and prospectors for Alaska even at this early period in the season.

M. D. Ratchford, of Massillon, Ohio, has been elected president of the Ohio State Miners' Convention.

The wire nail manufacturers concluded their session at Cleveland Thursday. The only announcement made was that they had partly succeeded in their object, which was to maintain the prices at card figures and provide themselves with such safeguards as will protect them from the newly formed steel pool.

Commercial.

It is reported that the Pacific Mail Steamship Company has set apart two of its steamers, heretofore in the Atlantic trade, for the west coast business between San Francisco and Central America and Panama.

The announcement is made that the Standard Oil Company will make an attempt this spring to tow a barge across the Atlantic ocean to some English port, probably Liverpool. This has never yet been tried. "The Standard Oil Company has been considering the plan for four years, and was about ready to make the trial last summer, but for some reason the idea was given up for a time."

Three-quarters of a million barrels of apples have been exported from Atlantic and Canadian seaports during the successful season now closing.

The United States wheat crop report says the condition of winter wheat in nine leading states on April 1 was as follows: "Pennsylvania, 64; Ohio, 56; Michigan, 82; Indiana, 77; Kentucky, 70; Illinois, 81; Missouri, 75; Kansas, 88; California, 91. Average for the entire country, 77.1; last year, 81.4. The condition of rye was, in Wisconsin, 77; average for the entire country, 82.9. Dry weather at seeding time largely retarded germination. Throughout the winter grain producing region the winter covering of snow was exceptionally scanty. In Nebraska, Kansas and westward there was less winter killing than usual, owing to the mild season, and present conditions are reported favorable."

The extraordinary mining boom in Alaska promises to benefit the lumbermen of Puget sound. "Already several yards have been established at Juneau and Sitka, and every vessel leaving the sound for Alaska carries a quantity of lumber."

Representatives of the National Millers' Association have protested before the House Ways and Means Committee against the discriminations now made by the transatlantic steamship companies and by the London dock companies against American flour received in the free port of London. Various acts of Parliament are already in force to prevent the dock charges which result in these discriminations, but the joint action of the London dock companies and the transatlantic steamship companies have forced upon American millers a bill of lading which counts them out of the privileges of these acts. It was urged that action be taken by Congress, not only to prevent the discrimination caused by these dock charges, but also to provide for inland shippers a through bill of lading containing all of the clauses and conditions borne by the ocean bill of lading of even date.

Southern cotton manufacturers complain there is no margin for profit, but none of the mills have shut down for that reason. The new crop is in good condition and the weather is favorable for its growth. It is evident from the *Tradesman's* reports that a very large area has been planted, but it is not time yet to make up reliable reports.

Before the House Ways and Means Committee, Thursday, Representative Clurdy, of Kentucky, advocated the enactment of some law, reciprocity or otherwise, which would open to American tobacco the markets of France, Spain and Italy—especially France.

New York canal boatmen naturally desire an early opening of the canal. A fleet of steamers has left Chicago for Buffalo, it is stated, and while it is probable that they will not be able to pass through the straits for some days, they will be ready to do so. Canal boat owners are naturally anxious to have their boats at Buffalo as soon as the fleet arrives, so they may get the grain.

Financial.

The following securities were sold at auction this week at New York:

20	Shares Ninth Avenue Railroad Company	160½
1	Share New York Society Library	$75
102	Shares Oriental Bank	191
149	Shares National Butchers' and Drovers' Bank	138 to 139
5	Shares Second National Bank of Orange, N. J.	100
21	Shares The McGall-Ives Hat Curling Machine Company of New Jersey	5
$6,000	Silver Springs, Ocala & Gulf R. R. 4 per cent.	73
25	Shares Trinidad Asphalt Company	100
25	Shares Trinidad Asphalt Company	100
8	Shares Oriental Bank	192
15	Shares New York and New Jersey Telephone Company	123⅞
5	Shares New York Phonograph Company	$6 lot
$4,000	Brooklyn and New York Ferry Co. 1st 6 per ct.	117
50	Shares Standard Oil Trust	233⅛
12	Shares Astor Place Bank	246½
45	Shares Third Avenue Railroad Company	179½
10	Shares Lawyers' Title Insurance Company	150¾

It is announced that the holders of nearly $10,000,000 of the general first mortgage bonds of the Northern Pacific Company have deposited their bonds under the plan of reorganization.

It is stated at the New York consulate of the Argentine Republic that an act has been passed by the legislature of the Province of Santa Fe, Argentine Republic, providing for the distribution by the government of 3,000,000 kilos of wheat for seeding purposes. Many of the farmers, it is said, are without resources at the present time.

Cuban bonds, which were offered to the public at New York, Thursday, did not excite the interest of Wall street to any considerable extent, and a leading firm of bond dealers is reported to have said they had not seen the bonds nor had they been solicited to take part in the loan.

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 65,903 tons, against 82,694 tons the previous week and 55,711 tons the corresponding week of the previous year.

The Nashville, Chattanooga & St. Louis Railroad Company has declared a quarterly dividend of 1 per cent., payable May 1.

The Brooklyn City Railroad Company has declared a quarterly dividend of 2½ per cent., payable April 15.

The Keokuk & Western reports for the year ending December 31 as follows:

	1895.	1894.	1893.	1892.
Gross	$380,624	$363,548	$386,643	$407,150
Net	125,435	98,919	112,312	118,917
Surplus	12,891	3,394	13,628	10,237

The Louisville, Evansville & St. Louis reports for the year ending December 31:

	1895.	1894.	Changes.
Gross	$1,509,746	$1,391,127	Inc. $118,618
Operating expenses	1,125,730	1,156,012	Dec. 30,282
Net	$384,015	$235,115	Inc. $148,900
Taxes	87,400	88,025	Dec. 625
Balance	$296,615	$147,090	Inc. $149,525
Interest floating debt	23,341	7,406	Inc. 15,935
Balance	$273,374	$139,684	Inc. $133,590

The annual report of the Mexican International Railroad for the year ending December 31 shows:

	1895.	1894.	Changes.
Gross	$2,664,126	$2,169,121	Inc. $495,004
Operating expenses	1,597,355	1,281,815	Inc. 315,539
Net	$1,066,770	887,305	Inc. $179,465
Stamp tax, less other income	19,331	Plus 196,126	Dec. 215,457
Total net	$1,057,439	$1,083,431	Dec. $35,992
Equals U. S. money	548,670	575,627	Dec. 27,557
Charges	571,103	498,675	Inc. 72,428
Deficit	$23,033	Sur. $76,952	Inc. $99,985

The Transcontinental Association difficulties have, it is said, been overcome, and on May 1 the three years' war of rates will end in a considerable advance in the freight rates, although east-bound tariffs will be slightly reduced. The Pacific Mail and Panama Railroad companies are parties. "An arrangement has been made for the continuation of the subsidy to the Pacific Mail Company. The guarantee will be $72,500 a month, or $870,000 a year, and it provides for the chartering by the association of a certain amount of space on the steamships of the Pacific Mail Company, in consideration for maintaining the established rates."

The Lake Erie & Western Railroad Company has declared a quarterly dividend of 1¼ per cent on its preferred stock, payable May 15.

The Cincinnati, Hamilton & Dayton Railway Company has declared the regular quarterly dividend of 1¼ per cent. upon its preferred stock, payable May 4.

The following February gross and net earnings have been reported:

	—Gross earnings—		—Net earnings—	
	1896.	1895.	1896.	1895.
Alabama Gt. South'n	$103,785	$108,010	$20,076	$26,279

Legislative.

A favorable report has been ordered by the Senate Committee on Territories on a bill providing for the election of a delegate in Congress from the territory of Alaska.

The House Committee on Claims has authorized a favorable report on the bill making provision for an appropriation of $2,078,196 for the payment of the French spoliation claims.

A bill remodelling the laws relating to the militia of the United States has been introduced by Senator Hawley, of Connecticut.

A favorable report on the bill to prohibit the sale of intoxicating liquors to Indians to whom lands have been allotted has been ordered favorably reported by the House Committee on Indian Affairs.

An amendment to the civil service law, giving the Civil Service Commission authority to administer oaths, take affidavits and depositions, and examine witnesses, has been ordered favorably reported by the House Committee on Reform in the Civil Service.

The Senate Committee on Agriculture has ordered a favorable report on the bill to provide for a director-in-chief of the scientific bureaus of the Agricultural Department, reference to which has already been made in these columns. The bureau, which would be placed under the charge of the proposed director, would include the weather bureau, the bureau of animal industry, and about fifteen divisions of the department engaged in technical and scientific investigation.

Miscellaneous.

A legal decision as to what constitutes "hardwood" has been handed down by a Massachusetts court, which decides that "nothing but lumber cut from trees bearing broad leaves is properly hardwood within the meaning of the law. Lumber sawed from spindle or needle leaf trees is not to be classed as hardwood." This, says a trade paper, "makes it all the more necessary to specify the kind of wood wanted in contracts which call for merely 'hardwood,' and there will be no ground for dispute."

In *McClure's Magazine* for May will be an article, by W. W. Keen, indicating the uses already possible, as well as those likely to become possible soon, of the Röntgen rays in the study and cure of human deformities, injuries and diseases. It will be illustrated from photographs taken by the new process.

The President issued his annual Behring sea proclamation Thursday, warning sealers from plying their vocation during the close season, from May 1 to August 1.

Foreign.

The German government has taken preliminary steps to fight the foreign petroleum monopoly, says H. Urban in the *Chemiker and Techniker Zeitung*. The first sessions of the committee appointed to inquire into this matter were held the latter part of last month in the Ministry of the Interior at Berlin.

It is believed that higher prices for cocoanuts are at hand, for, according to the Manchester *Guardian*, they show a decidedly rising tendency, "and there is every probability that the high prices which ruled during 1893 and 1894 are likely to be reached, if not exceeded, in the course of the current year."

The London *Financial News* says: "Many sins and shortcomings are laid at the door of the joint-stock system. The latest charge against it is made by a colonial governor, who says that British goods often lose a market through the carelessness with which they are packed, and adds that the servants of joint-stock companies are greater sinners in this respect than those of private firms, who work more or less under the eye of an interested master."

The latest news from West Australia is of lack of water and intense heat. "Many prospectors, miners and traders are leaving to escape sickness and death. It is true that the government is doing all in its power to remedy the water famine, and is prepared to spend $1,000,000 to that end. But, unfortunately, the government cannot control the temperature, and it is the recent intense heat that has caused so much and such fatal sickness."

An Australian milling company estimates Australian wheat exports to date 28,597 tons, and adds: "How far the advance in prices will affect the trade with Africa, Mauritius, Java and other places remains to be seen, but so far it appears as if California will only help make up the quantity required without depressing the value of Adelaide wheat and flour, for orders for these places continue to come, in spite of the high prices we are compelled to ask. These places take on an average about 3,500 tons a month; assuming that only half the quantity will be required for the remainder of the season, it means that the markets outside the colonies will draw on our surplus to the extent of, say, 17,000 tons, leaving, say, 39,000 tons for the colonies, which is a very small quantity in view of the large requirements of New South Wales, Queensland and West Australia."

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Carrier—Extortion—Reasonable Rate.

The Kentucky Court of Appeals held, in the recent case of The Louisville & Nashville Railroad Company vs. The Commonwealth, that section 816 of the Kentucky statutes, which provides for the punishment of any railroad corporation which shall charge "more than a just and reasonable rate of toll or compensation for the transportation of passengers or freight," is void for uncertainty, no standard being fixed by which the corporation may regulate its conduct; that the infliction of the penalties prescribed by such a statute would be the taking of property without due process of law and in violation of both the state and the federal Constitution, and that it would seem that such a statute, even if in all respects valid, could not be enforced against a corporation which has not exceeded the rates fixed in its charter, as those rates remain the legal rates until changed by law.

Chattel Mortgage—Validity.

The Supreme Court of Indiana held, in the recent case of Lumbert et al. vs. Woodward et al., that any instrument which reasonably expresses the intention of the parties to secure a particular debt as a lien upon personal property which is sufficiently indicated, will, if duly acknowledged and recorded, constitute a chattel mortgage, and that where an instrument, purporting to convey certain chattels, and containing the provision that the seller "retain and do hold a vender's lien on all of said property, and on all new additions thereto made by the purchaser, to secure the payment" of certain notes, is duly signed and acknowledged by the seller, and the purchaser indorses thereon an acceptance of "the terms and conditions of the foregoing instrument, and agrees to all its obligations therein contained to execute and perform," which is also duly acknowledged by the purchaser, and the instrument and acceptance are recorded within ten days in the county where the purchaser lives, it constitutes a valid chattel mortgage.

Railroad Receiver Action.

The Supreme Court of Georgia held, in the recent case of Hollisfield vs. Wrightsville & Tennille Railroad Company et al., that while an action may be brought in a state court against the receiver of a corporation appointed by a federal court, without previously obtaining leave of the latter court, when such action arises in respect of any act or transaction of the receiver in carrying on the usual and ordinary business of the corporation in connection with the property in his charge under the order of appointment, such a receiver cannot, without such leave, be sued in a state court in an action the purpose of which is to take from his hands or control property belonging to the corporation or held by it under a claim of ownership at the time the receiver took possession. The court said that the question of the receiver's right or authority to hold or manage such property, or any part thereof, cannot be thus raised, and that an equitable petition filed by a stockholder of a railroad company, to restrain it from allowing certain of its capital stock alleged to have been issued to, and to be held by and in the name of another railroad company in violation of law, to be voted by the latter company, or by any person holding such stock for it, cannot be maintained when neither that company nor its duly appointed receiver is made a party defendant.

Benefit Insurance—Certificate.

The Supreme Court of Georgia held, in the recent case of Shackleford vs. Supreme Conclave Knights of Damon, that the by-laws of an organization which expressly and exclusively relate to persons who become applicants for membership after the organization has been completed are not applicable to those who participate as charter members in forming the organization; that where a "benefit certificate," in the nature of a policy of insurance, was delivered by a corporation which issued it, the same being the grand conclave of a certain brotherhood, to an individual or his duly authorized agent, no fraud or fraudulent concealment to obtain the delivery of such certificate having been practiced, and if then or afterwards the insured or the beneficiary paid or tendered all dues demandable up to that time, the insurer was bound by and estopped from denying recitals therein to the effect that the insured was a duly initiated member of a subordinate conclave, and entitled as such to receive the certificate in question; that where the controlling question in the case was whether or not the "benefit certificate" had ever in fact been delivered to one who was a duly authorized agent of the insured, and who obtained possession of the certificate in good faith and without fraud, the case ought to have been made to turn mainly upon the determination of this issue, and should have been submitted to the jury accordingly; that the court, therefore, erred in presenting for their consideration various other questions relating to matters antedating the alleged delivery of the certificate, and which could not in any view properly affect the result, and that if there was no lawful delivery of the certificate, there was no contract on the part of defendant and it was not liable, whereas, if there was a lawful delivery, the questions last above indicated were immaterial.

Creditors—Father and Son.

The Kentucky Court of Appeals held, in the recent case of Bement vs. Ohio Valley Banking and Trust Company, that where a father gave to his son a debt upon another, but subsequently brought suit upon the debt and had an attachment levied upon the debtor's property, and in compromise of that suit the debtor conveyed the attached property to the creditor's son, who undertook in consideration thereof to pay the debt to his father, the son could not, in an action by his father's creditors to subject what he owed his father on account of that undertaking, rely upon the original gift of the debt to him, and plead the statute limiting actions for relief for fraud to ten years; that the parties having subsequently ignored the original transaction, the son could not rely upon it, and that the promise to the father being in writing, an action thereon was not barred until the lapse of fifteen years from the time it was made. The court further held that a written release from the father to the son of a debt which the son owed him would not avail the son in an action by the father's creditors to subject the debt, the release being without valuable consideration; that as it was executed within ten years prior to the commencement of the action, and manifestly could not, with reasonable diligence, have been discovered by plaintiff until filed, the plea of limitation as to it would not avail, though it was executed more than five years before the commencement of the action, and that the liability of the grantor in a deed on his covenant of warranty, upon which judgment was recovered against his estate on account of his widow's claim to dower, must be regarded as an "existing liability" from the time the deed was made, and transfers of property made by him without consideration subsequent to the execution of the deed were constructively fraudulent as to that liability.

Anti-Trust Law Construed.

The United States Circuit Court for the Northern District of Illinois held, in the recent case of The Attorney-General vs. The American Tobacco Company et al., reported in the Chicago *Legal News*, that the right of a litigant to avail himself of the judicial power of the United States through the instrumentality of the Circuit Court of the United States is limited by federal legislation, and that any suit "of a civil nature, at common law or in equity, where the matter in dispute exceeds, exclusive of interest and costs, the sum or value of $2,000, and arising under the Constitution or laws of the United States," may, within the limitations now current, be originally commenced in, or be removed from a state court and thenceforward be prosecuted in the Circuit Court of the United States. The purpose of the information in this case was to enforce against the American Tobacco Company the prohibition contained in the act of 1893 relating to trusts and conspiracies, and from doing business in Illinois. The cause of action alleged was, the the court held, conduct which, within the meaning of the act, if it have any meaning, was an offense or misdemeanor, and did not involve any federal question. The court said: "The information does not show as the ground of action any contract right in the state, or any property right or easement vested in the state as trustee representing the public or otherwise. The action is based on a statute or rule of conduct which the state, as a governing agent, has prescribed, and the violation of which on the theory of the information is an offense or misdemeanor. This is not in its nature a suit to recover for, or stop the continuance of, an injury—it is the prosecution of an offender against a criminal statute. This defendant corporation is not bound to refrain from carrying on a monopoly in cigarettes because the state, as a sovereign or in any other capacity, is damaged thereby, but because the state, as a sovereign, has made a rule to the contrary. The damage, whatever it may be, would be precisely the same if no such rule or statute had been enacted. Yet, in the latter case, there would be no action. The information, therefore, as already said, has no other purpose than the enforcement of a penal statute."

BUSINESS NOTES.

Interstate Commerce Law.

A Chicago dispatch says the Interstate Commerce Commission during the last ten days has issued forty subpœnas for shippers and men connected with the freight departments of eastern railroads to appear before the federal grand jury, May 4. The inquiry will be in connection with rebates and cut rates on dressed beef and other packing-house products from the stock yards in Chicago.

Live Hogs for Mexico.

The *American Agriculturist* says little progress has followed in what at one time seemed an encouraging prospect, and reciprocity with Mexico is in order. "A nominal tariff enables Mexico to ship vast numbers of cattle across the Rio Grande, most of the 156,000 imported in seven months ended January coming from that country, while our exports to Mexico were limited to 746, including a few breeding animals, and total exports of live hogs for seven months were only 7,493, of which 2,656 went during January."

Prices in England.

The London *Economist* says: "The movement of prices since the beginning of the present year has been, on the whole, downward, a fall taking place in January, followed by a steadiness in February, while during the past month another drop has taken place, leaving the general range rather less than 1 per cent. below the level of December 31, 1895. As measured by our index number, which shows the combined movement in the prices of a number of staple commodities, the variation carried for fifteen months has been as follows:

	Index No.
1896, March 31	1985
1896, February 29	1992
1896, January 31	1990
1895, December 31	1999
1895, September 30	2009
1895, June 30	1931
1895, March 30	1921
1894, December 31	1923

Unfavorable Oyster Season.

The Philadelphia *Press* says: "The approaching close of the oyster season makes pertinent the fact that it is believed in Maryland that it will be a partial failure. In Baltimore alone about 5,000,000 bushels of oysters pass through the hands of the dealers every year, but this season the total will fall to nearly 4,000,000 bushels. And what is still more alarming is the fact that there are evident signs of the failure of the supply in Chesapeake bay, the greatest oyster resource in the country, if not in the world. Warnings have been given in past years that this would be the result unless there was a reform in the methods employed and greater care taken of the beds. Legislatures have been appealed to in this matter, and while some have responded others have been negligent. There ought to be no further delay unless the country is to be deprived of one of its most toothsome food supplies."

British Mercantile Marine.

The St. Louis *Age of Steel* says: "The growth of the British mercantile marine, notwithstanding some recent periods of depression, and the general revival of the shipbuilding industries in other countries, has by no means reached the decadence some suppose. In ten than a decade the tables show an increase of 3,200,000 tons. A large percentage of this gain is due to the building of large steamships. In speaking of this matter a British contemporary says: 'We have 8,375 steamers of 9,900,000 tons. In fact, in ten years we have added over 9,500,000 tons of steamers, even after all allowance is made for sales, wrecks, and waste generally, while the sailing tonnage is actually less than it was ten years ago by 462,000 tons. Antecedent to 1892 the average for some years was nearer 500,000 tons, although in 1887 a minimum was reached with an addition of 46,690 tons.' That the shipbuilding industry will eventually be more evenly distributed among various nations is a foregone conclusion, and in this inevitable result Great Britain must be the greatest loser from competition."

European Law in India.

Sir Courtenay Ilbert, in a paper on the "Application of English Law to Natives of India," before the London Society of Comparative Legislation, "said that in 1772, when Warren Hastings became Governor of Bengal, he laid down a rule that 'in all suits regarding marriage, inheritance, and caste, and other religious usages and institutions, the laws of the Koran with respect to Mohammedans, and those of the Shaster with respect to Gentoos (Hindus), shall be invariably adhered to.' This rule still indicated the class of subjects with which the Indian legislatures had been disposed to leave to the domain of native law and usage. The criminal law and the law of civil and criminal procedure were based wholly on English principles. So, also, subject to some few exceptions, were the law of contract and the law of torts or civil wrongs. But within the domain of family law, including the greater part of the law of succession and inheritance, natives still retain their personal law, either modified or formulated to some slight extent by Anglo-Indian legislation. The lecturer was inclined to think that the time for framing a code of Hindu-Mohammedan law had not yet arrived."

Production of Potatoes.

The production of potatoes in several countries in which this food article is largely grown was more abundant than usual the past year. *Dornbusch* (London) says: "So much has been said and written about the influence of potato supplies upon the consumption of wheaten bread in this country that it might be supposed that the United Kingdom was alone in this respect, but the crop returns from the four principal potato-growing countries in Europe demonstrates that three of them had larger crops than in 1894, while those in Great Britain, Ireland and Germany show a marked increase. The United States also produced a crop of unusually fine dimensions. The potato crop compares as follows:

	Tons			
	1895.	1894.	1893.	1892.
United Kingdom	7,065,000	4,662,000	6,540,000	5,632,000
France	11,000,000	10,250,000	10,662,000	12,208,000
Belgium	2,950,000	3,190,000	3,927,000	4,010,000
Germany	37,481,000	29,049,000	32,278,000	27,998,000
Total	58,496,000	47,151,000	53,407,000	49,848,000
U. S. America	7,430,000	4,270,000	4,576,000	4,000,000
Total	65,926,000	51,421,000	57,983,000	53,843,000

British Flour Consumption.

There have lately been issued statistics bearing upon the potato yield of Great Britain for last year, the total production being higher than in any year since the returns have been collected, as will be seen from the following comparative statement:

	Tons		
	Great Britain.	*Ireland.*	*Totals.*
1895	3,593,000	3,472,000	7,065,000
1894	2,789,000	1,873,000	4,662,000
1893	3,476,000	3,064,000	6,540,000
1892	3,049,000	2,585,000	5,634,000
1891	8,053,000	3,037,000	6,090,000
1890	2,812,000	1,810,000	4,622,000
1889	3,588,000	2,847,000	6,435,000
1888	3,059,000	2,523,000	5,582,000
1887	3,565,000	3,569,000	7,134,000

The London *Miller* says: "Although the diminished consumption of flour this season is to be partly accounted for by the above enormous production of potatoes, millers consider the reason is chiefly owing to the phenomenal mildness of the winter and the low price and abundance of green vegetables. Millers are, therefore, stocked heavily with flour, which they either cannot sell or are unable to deliver to bakers against previous contracts; consequently, there is no desire on their part to make free purchases of the raw material, more especially as they calculate wheat is yet about 1s. per quarter higher than the relative value of flour."

Argentine's Menace to England.

The London *Pall Mall Gazette* says: "We have certainly done our best to place Argentina in as favorable a position as possible for the development of its resources. Thanks to financial houses such as the Barings and others, and to the greed of our speculators, the Argentine governments, both national and provincial, have literally had money flung at their heads. Allowing for the fact that a considerable portion went into the pockets of middlemen, there have been few comparatively undeveloped countries which have been so much handed over to them for railway construction, the opening up of new districts, public works, and the like. The government alone, between the years 1881 and 1892, took over £55,000,000 directly. It has been estimated that in all some £300,000,000 of English capital has been sunk in Argentina, half of which has been lost. The provincial loans have, of course, been hopeless failures, with the exception of Entre Rios and Buenos Ayres. The provinces were absolutely unable to meet their liabilities, and, having practically repudiated them, on the whole find the new condition of affairs very satisfactory. The national government honorably strove to emerge from the dilemma, but it has only been at the expense of suspension of the railway guarantees, the whole or partial repudiation of interests, and the suspension of sinking funds. Such a state of things was inevitable, and so far as the government itself and its creditors are concerned, decidedly deplorable. On the other hand, the farmers have found the country fairly well opened up, and they are enabled to place their produce on European markets at prices which, to them, aided as they are by the depreciation of currency, are very profitable, but which to us is sheer ruin."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

SHOWING STOCK OUTSTANDING, BONDS, MILEAGE, LAST DIVIDENDS AND TOTAL SALES, WITH RANGE OF PRICES IN 1895 AND 1896.

Stock, outstanding.	Bonded Indebtedness	Mileage	Date payment last dividend declared.	Rate per cent. last dividend.	Divi'nd period.	Sales of the week. Shares.	Highest and lowest 1895. THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Favorable weather, except in some northwestern states, has stimulated demand for seasonable merchandise, notably light summer clothing. On the whole, the week presents a distinct gain. This is not so much apparent at eastern centers, except Baltimore and Pittsburgh, as in the central Mississippi river valley. At some northwestern cities the movement of merchandise has declined, but at a number east it is unchanged, while southern cities in most instances report business quiet, and in others less favorable.

There is a better demand for cotton machinery to go south; eastern cotton dyers are busier, and there is a demand for hardware, machinery and locomotives. Preparations are making at most lake ports for the opening of navigation, one of the first effects of which will be to release 10,000,000 bushels of grain in store at Chicago. Increased volume of business is most conspicuous west, at St. Louis, Chicago, Kansas City, Omaha, Milwaukee and Memphis. Less gain is shown on the Pacific coast except in export lines, shipments of lumber from Portland and San Francisco being conspicuous. Tacoma continues to send flour, lumber and cotton across the Pacific and to South Africa.

Stock prices improved materially this week, with increased activity and a better public participation. The movement is based on a better feeling toward American securities in London, where the glut of investment funds and the subsidence of speculation in mines tends to bring our stocks into prominence. Buying from that quarter has, however, been confined mainly to bonds. New government 4s have advanced on investment purchases. Sugar stock was a strong feature on manipulative and favorable rumors. The stock market is, however, narrow, and subject to reactions on professional sales to realize profits. Bonds are active and firm. Silver shows weakness. Foreign exchange is depressed on offerings of loan bills and, possibly, drawings against European purchases of securities. Demand sterling on Friday was inactive at 4.88½ @ 4.88¾. A shipment of $500,000 gold was made to Germany last Tuesday, apparently on a special order.

In industrial lines there is not much gain. There have been fair orders for shoes, but less is doing in that direction now, and leather is weak, even with production curtailed. While prices for cottons and woolens are nominally unchanged, heavy stocks of the former hang over the market, and good orders for the latter could probably be placed below nominal quotations. Silk manufacturers complain of a scarcity of orders. Less business is doing in iron and steel than expected after the formation of the big steel pool and the stronger tendency of special forms of the metals because of combinations of makers. Transactions in iron and steel have been recorded at less than pool prices, but on the basis of contracts held by middlemen. This indicates that a number of mills at the time the pool was formed had contracted further ahead than presumed, and that the day for the test of strength between the pool and the public is a little further in the future. Mercantile collections generally continue slow, and improvement in sales of general merchandise is relative, as merchants prefer to carry goods rather than accounts.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 2,017,000 bushels, against 1,754,000 bushels last week, 3,165,000 bushels in the week a year ago, 3,019,000 bushels in the week two years ago, and as compared with 3,963,000 bushels in the corresponding week of 1893. Exports of Indian corn amount to 1,074,000 bushels this week, against 1,391,000 bushels last week, 778,000 in the week a year ago, and 2,040,000 bushels in the week two years ago.

A marked evidence of better feeling is found in the steadiness and the upward tendency of many quotations for staples. Thus, prices of pork, coffee, print cloths, wool, steel billets, pig iron and other shapes of iron and steel are all nominally unchanged, while quotations for sugar, for wheat flour, wheat and corn, for cotton and petroleum and for steel plates are higher. Lard is lower under the pressure of low-priced Indian corn and supplies of hogs. Copper is lower than expected, in view of heavy exports because of enormous domestic production. Tinplates are a fraction off, but it is expected, now that a pool among makers of this product has been formed, that the price will be put up.

Additional evidence of an increasing volume of business is found in the total of bank clearings this week, $984,000,000, 6 per cent. more than last week, 5.6 per cent. more than in the corresponding week one year ago (when trade had already begun to revive noticeably), and 8 per cent. more than in the second week of April, 1894. As contrasted with the corresponding week in 1893 (just prior to the precipitation of the panic) the week's falling off is 20 per cent. Compared with the like week in 1892 it is 6 per cent., in 1891 13 per cent., and with the corresponding week of 1890 the decrease is 14 per cent. Total business failures in the United States are 244 this week, against 231 last week, 219 in the corresponding week of 1895, 212 in 1894, and 217 in 1893, which is a smaller excess than the average increase weekly during the first quarter of the current year.

Wholesale trade improves slowly in the Province of Ontario, but Toronto merchants report remittances backward. The situation in the Province of Quebec is less favorable, country roads being broken up and travelers, in some instances, recalled, although the dry goods trade is stimulated by warm weather. Less activity is shown in the shoe industry at Quebec city, but the export lumber trade in the province promises better than usual. Improved weather has stimulated trade in Nova Scotia, where collections remain slow, and the fish business is unsatisfactory. The New Brunswick log cut is large, and the lumber business opening well. There are 34 business failures reported from the Dominion of Canada this week, against 30 last week, 23 in the corresponding week a year ago, and 31 each in corresponding weeks in 1894 and 1893. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $19,156,000 this week, a large increase as compared with preceding periods. Last week the total was $15,353,000, and in the week one year ago it was $15,100,000, while the corresponding week two years ago it was $17,200,000.

FINANCIAL.

The Money Market.

The New York loan market has continued to give further symptoms of ease, with increased offerings of funds in all its departments. The depositary banks have turned in considerable sums at the Treasury, the advance in the price of government bonds stimulating payment of the subscriptions therefor in full, but this has had no apparent effect on rates. On the other hand, foreign bankers continue to offer sterling loans, and transactions are reported in varying amounts whenever rates can be made acceptable to this class of lenders. Time money is also in good supply from local sources, the rates for both long and short time loans being quoted at 4@4½ per cent. Activity in mercantile paper has increased, a gratifying feature being that with a larger volume of offerings the buying demand has also attained increased proportions; 5½ per cent. is quoted for double named paper, and it is understood that a market is appearing for the less choice grades, though, of course, at somewhat higher figures. Money on call has varied from 2½ to 4 per cent., the bulk of the business on the Stock Exchange at the end of the week being at 3 per cent.

The New York Banks.

The changes in averages shown by last week's bank statement were by no means striking or important. The principal one was an increase of $1,264,000 in total reserves, made up of a decrease of $416,000 in specie, and an increase of $1,680,000 in legal tenders. It would seem that the continued process of depositing money in the Treasury in payment for government bonds was offset to a much greater extent than previously by the return of money sent to the interior about April 1. The loans increased $387,000, which is generally attributed to greater ease in connection with mercantile accommodations, and the deposits gained to the extent of $1,355,000. As a result of the other changes, the surplus reserve increased $925,000, the figures of the statement comparing as follows with those of the preceding week:

	Apr. 4, '96.	Apr. 11, '96.	Changes.
Loans	$465,224,900	$465,612,400	Inc. $387,500
Specie	59,251,600	58,835,000	Dec. 416,600
Legal tenders	78,203,300	79,884,100	Inc. 1,680,800
Deposits	481,795,700	483,151,400	Inc. 1,355,700
Circulation	14,254,500	14,341,300	Inc. 86,800
Total reserve	137,454,900	138,719,100	Inc. 1,264,200
Reserve required	120,448,925	120,787,850	Inc. 338,925
Surplus reserve	17,005,975	17,931,250	Inc. 925,275

At the corresponding period last year the surplus reserve was $14,927,775, against $80,831,000 in 1894.

The Boston Banks.

	Apr. 11, '96.	Apr. 4, '96.	Changes.
Loans	$159,219,000	$158,697,000	Inc. $522,000
Circulation	9,898,000	9,802,000	Inc. 96,000
Deposits	97,492,000	96,913,000	Inc. 579,000
Due from reserve agts	18,635,000	17,918,000	Inc. 717,000
Legal tenders	5,337,000	5,214,000	Inc. 123,000

Foreign Exchange.

Extreme dullness has prevailed in this market during the week. The features are restricted inquiry, with a small supply of bills. Bankers representing foreign capital are, however, ready to loan it in the form of sterling bills. It would seem that from day to day some amounts are put out in this way. Offers of bills created by the shipment of $500,000 gold to Germany early in the week also had an effect. On the other hand, it is impossible to substantiate the rumors that certain large houses are supplying bills drawn against the sale of

blocks of railroad securities abroad. Posted rates were reduced on Tuesday from 4.88½ @4.89½ to 4.88@4.89, and restored to first named figures on the following day. Actual business in demand sterling was quoted as low as 4.88½ and as high as 4.89, but the bulk of the week's business in such bills was at or near 4.88¾. Friday's market was soft and demand was quoted at 4.88½ @4.88¾. The announcement that Heidelbach, Ickelheimer & Co. would ship $500,000 gold by Tuesday's German steamer was a surprise, but its effect was soon lost. It apparently resulted from arrangements by the Russian government to increase its gold stock or from local demands at Berlin is a question.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

April 11.	*April* 13.	*April* 14.	*April* 15.	*April* 16.	*April* 17.

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.88¾ @ 4.89	4.88½ @ 4.88¾	4.88½ @ 4.88¾	4.88¾ @ 4.88¾	4.88¾ @ 4.88¾	4.88½ @ 4.88¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87¾ @ 4.88	4.87½ @ 4.87¾	4.87½ @ 4.87¾	4.87¾ @ 4.87¾	4.87¾ @ 4.87¾	4.87½ @ 4.87¾

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¾ @4.89; commercial bills, 4.87@4.87¼; francs, 5.16⅞@5.15; reichsmarks, 95 3/16@95⅝.

The Bank of England rate is unchanged at 2 per cent. The bank this week gained £565,000 in bullion, and its proportion of reserve is 59.88 per cent., against 59.16 per cent. last week. In the London open market discount is 9/16@5/8 per cent. and call money ¼ per cent.

The following table shows the value of imports (exclusive of specie) at the port of New York for the week ending April 10, 1896:

	1896.	1895.
Dry goods	$2,388,283	$3,134,187
General merchandise	6,830,472	7,817,794
Totals for the week	$9,218,755	$10,951,981
Previously reported	142,888,533	143,832,561
Since January 1	$151,106,288	$154,784,542

The exports (exclusive of specie) from New York to foreign ports for the week ending April 14 were $417,422 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,138,554	$7,553,987
Previously reported	106,097,164	97,222,781
Since January 1	$113,235,718	$104,776,768

Imports and exports of the United States for the month and nine months ending March, 1895 and 1896 (preliminary figures for 1896, corrected to April 14, 1896), were as follows:

March. MERCHANDISE.	1895.	1896.

Silver.

The silver market has been comparatively featureless. The most noticeable fact is that the decline which set in during March, following the speculative rise in the early part of that month, seems to have culminated by the decline of the London quotation for bars, on Tuesday, to 30 13/16d. in London, the New York commercial quotation touching 67⅝c.

THE STOCK MARKETS.

The New York Stock Market.

Increased activity and advancing quotations have given a much healthier appearance to speculation. The movement which developed this week has been attended by a number of gratifying circumstances, among which a leading place should be given to the reappearance of public interest, and to the fact that attention has turned from the manipulated industrials to railroad shares and the more legitimate speculatives generally. The bullish demonstration is, to a certain extent, based upon the expectation of greater business activity with the progress of spring, and the prevalent impression that, despite the damage already done to winter wheat, the season opens auspiciously for other crops. The belief that the session of Congress will soon terminate was not without effect, while the relegation of foreign controversies to a position of secondary importance had a tendency to revive speculative confidence.

Above all, however, the change in London's attitude toward American bonds and stocks was calculated to produce a decided impression here. In fact, the week's bullish movement in our market is, in a measure, a reflection of what is going on in London, where more or less of a speculative revival is in progress, the enormous and long pent-up investment demand there having demonstrated its power by a marked rise in consols and "home" securities. South Africans, so long the absorbing speculative feature of the London market, are now in disfavor, and, as would be natural, the speculative attention of the British public has, in a measure, turned toward American stocks. Wall street lays much stress upon the presence of Mr. J. P. Morgan in Europe, and, whether correctly or otherwise, credits that gentleman with having used his influence to assist the movement in question. It cannot, indeed, be said that purchasing of stocks for foreign account has been on a large scale. Nevertheless, a revived interest in our market has been shown by foreign investors and speculators, and orders for bonds of the better class have come from London in sufficient volume to affect that department very favorably. It should also be noticed that the local investment demand for the new government 4s has been a feature, the quotation rising from 117 to 118. The floating supply would seem to have been absorbed, and even higher prices for the 4s are talked of.

Among other bullish factors of the moment, the increasing ease of the money market may be mentioned, as well as the dull and heavy condition of foreign exchange. The shipment of $500,000 more gold to Germany on last Tuesday on a so-called "special" order was, therefore, disregarded, and the "street" is influenced to a greater degree by the disposition of foreign houses to put out money on time in this market. The chief speculative limitation is found in the character of the participation. In spite of the increased public interest, professional interests have been very prominent in every movement of prices, and the tendency to realize profits is effective in checking advances, while it should not be overlooked that conservative people are somewhat inclined to view the possible revival of the free-silver agitation in connection with the presidential nominating conventions of the great parties as a cause for future reaction. The elimination of the short interest and the professional nature of much of the trading leaves the market, however, open to reaction, such as was seen on Friday, when prices sold off, in some cases rather sharply.

American Sugar has been the prominent speculative feature of the week. Selling at 119 on last Saturday, it advanced steadily on heavy manipulation, covering by shorts and public buying to 125⅞ on Thursday. The movement in the stock was facilitated by the circulation of confident reports that an extra dividend is in prospect in the early summer and by advances in the price of refined sugar. On Friday, however, the price reacted to 123. Tobacco, so lately the most active speculative, has subsided into comparative obscurity. It has been weak and irregular, and sold with the cash and scrip dividends off down to 67¼, reports being still circulated that legal measures might be resorted to to stop payment of the scrip dividend.

The international stocks were, of course, watched with attention. St. Paul rose from 75¼ to 77⅛ and Louisville from 49½ to 52, these movements being typical. On Friday London realized profits in both of the stocks named. On the other hand, there was some pressure to sell Rock Island, while Burlington, though affected by the unfavorable annual report, rose from 77⅞ to 79¾. Missouri Pacific displayed renewed activity and was supported on reports of favorable conditions in the southwest, rising from 24⅜ to 26⅝. Atchison securities were also strong, and the new 4 per cent. bonds were the object of a decided manipulation which, it is reported, is designed to carry them into the eighties. The poor condition of winter wheat in the central western states has a bad effect on "Big Four" shares. Among the features of the bond list was the foreign buying of Chesapeake & Ohio issues and of Southern Railway 5s. Reading was inclined to advance in the early part of the week, but encountered a setback in the form of Governor Morton's approval of a measure empowering the attorney-general to investigate the coal combination. Manhattan ranked with the strong features, advancing to 112¼, and broke on Friday to 108½ on a reported adverse decision in the suits regarding its tax assessments. Northern Pacific bonds were strong on buying induced by favorable accounts of the reorganization.

Among the industrials General Electric was exceptionally weak, falling to 36⅞. There were rumors of a readjustment of the company's capital, but the decline is more generally attributed to liquidation by a bull pool. National Lead received some attention on rumors of a dividend, while Illinois Steel had Chicago support, and Tennessee coal was firm and higher on Friday.

Boston Stock Market.

[Special to BRADSTREET'S.]

The general market has ruled quiet, but at the close Sugar attracts attention, and under a good business the price has been advanced above 125, the close showing an advance of 7⅝ points during the past six days' trading. Atchison has been quiet, but has advanced 1 point in price, with Chicago, Burlington & Quincy 2 points higher under fair trading. Coppers have ruled more quiet, but about steady in price. General Electric has attracted fair attention, while Bell Telephone closes higher, with quiet trading. United States Leather very slow.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending *Apr.* 16, 1896. Price	Week ending *Apr.* 9, 1896. Price	Week ending *Apr.* 16, 1896. Sales	Week ending *Apr.* 9, 1896. Sales

BUSINESS BETTER.

IMPROVED RETAIL AND WHOLESALE DEMAND FOR SEASONABLE MERCHANDISE AT THE WEST.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, April 17.—There is still a lack of activity, and operations are of moderate volume in all departments of trade. The money market is easier, which is due in part to increased confidence in mercantile credits. Collections are reported fairly good, and there is a better demand for mercantile paper. Western paper is being sold as low as 5½ per cent., with eastern at 5 per cent., while little factory is offered, and gilt edge would be taken at 4 per cent. Time money is quoted at 4½ per cent. on six months, with four months at 4¼ per cent. The boot and shoe trade is quiet. Buyers have placed liberal orders, and the prospects are in favor of a settled market. Leather is moving moderately, but it is slow work to force prices down further. Production is largely curtailed, and dealers are not disposed to sacrifice their stock on hand. Hides are in light supply, but the eastern demand is very flat. Iron and steel is firmer, owing to the combinations and pools, but trade is moderate. Lumber is steady, with a fair business.

Providence, April 17.—General business remains unsatisfactory and quiet, especially in such lines as woolen manufacturing, in which there are apparently no signs of improvement. Manufacturers of machinery for cotton mills are having a good demand from the south. The concerns engaged in the dyeing of cotton cloth are generally busy. Some of the manufacturers of hardware and engines are curtailing, although a demand for locomotives is reported from Mexico.

Philadelphia, April 17.—Trade is quiet in wool and textile circles; manufacturers are not buying except for immediate wants, even with concessions in price; collections are poor, and the disposition of a number of buyers is to get and take all the time possible. Dry goods are very quiet. Morocco and leather continue dull, with a very limited demand for fine grades. A slight improvement in boots and shoes is noted. Sugar shows an advance in certain grades. There is an increased demand for lumber, both in local and out-of-town orders. Iron is quiet. The combination fixing the price of steel billets, it is believed, will have a tendency to make the market stronger.

Pittsburgh, April 17.—The volume of business is larger. Country buyers are more numerous. Other orders, those from traveling salesmen, are larger and more numerous than for some time. Prices in all lines are well maintained, and the outlook is promising for a profitable season. There has been but little business done in the local iron market. Prices have changed but little, and the market is listless.

Buffalo, April 17.—There is no change in general trade. Favorable weather has tended to stimulate the retail trade, but wholesalers are not inclined to push business, as collections still remain unsatisfactory, and they prefer to keep their goods rather than carry the accounts. In financial circles the demand for money is strong, but regular customers are being cared for. Some activity is noted in marine circles preparatory to the opening of navigation, and the outlook for a good season's business on the lakes is favorable.

Baltimore, April 17.—The late unfavorable weather has retarded the sale of goods, but with present weather a revival is noted, and quite a number of buyers have been seen in town. Indications point to a good trade for the remainder of the month.

Collections have improved, and a liberal volume of business for the season shows an improvement.

West and Northwest.

Cleveland, April 17.—General wholesale trade is quiet and without material change. Collections are slow and unsatisfactory.

Chicago, April 17.—There is a good increase in sales of light summer dry goods and clothing, owing to the sudden arrival of unusually warm weather for this season. There are a good many buyers in from the country, but the bulk of the business is in filling mail orders. Buyers in the interior who have delayed securing summer goods have come in with a rush, and sales exceed last year's. Steel manufacturers continue to report a good run of orders for rails, billets, rods and structural iron, and the feeling is strong. The demand for pig iron, although not as good as last week, was fairly active, and all grades are firmly held. Sales of bar iron and light hardware were larger at full prices. The feeling on leather is unsettled. Tanners are reporting good sales, but there is a lack of uniformity in prices, and they are not in comparison with those of hides. The latter are steady, with moderate sales. Building materials sell well. Sugars are fairly active, the advancing tendency stimulating buying. Wool receipts 241,717 pounds. The opening of navigation on the lakes will release 10,000,000 bushels of grain that has been sold to the east and give bankers plenty of money in the near future. Collections are fair.

Detroit, April 17.—The sudden advent of summer weather has given a considerable impetus to seasonable merchandise. In other lines a fair business is doing. Collections, however, continue slow.

Louisville, April 17.—No special activity is observed in the jobbing trade. The unusually warm weather improves retail sales. Satisfactory prices are reported for good leaf tobacco, while low grades are quiet.

St. Louis, April 17.—Favorable weather continues to stimulate sales among retailers, while the wholesale and jobbing trade, with but few exceptions, say transactions are only fair, still being equal to same period of last year. Sales are mainly on open orders, and from contiguous territory. The leather market is again unsettled, the movement being slow and at varying values. Hides are dull and conditions unfavorable. Agents for pig iron report fair-sized orders and inquiries for lots of increased tonnage. Scrap iron and metals are in better demand, with an encouraging outlook. Iron and steel bars, plates, light and galvanized sheets are higher, principally on account of the combination. Tin is still low, but it is expected that a meeting at Pittsburgh this week will help the situation.

Kansas City, April 17.—Trade continues good in all lines of merchandise. Live stock receipts are liberal, with low prices. Collections are good.

Milwaukee, April 17.—The volume of trade is only fair, though somewhat improved over the past few weeks. Collections are still rather slow.

Des Moines, April 17.—Wholesale trade holds about the same; not much improvement. Collections are fair. Country trade is dull, owing to the farmers being busy seeding. A better general feeling is expressed for the future.

St. Paul, April 17.—There is a noticeable falling off in trade since last week in nearly all lines, though buying is still heavier than at the corresponding week a year ago. Collections continue to improve.

Minneapolis, April 17.—Stormy weather has interfered with the volume of business this week, but present indications are in the direction of improvement in both.

Omaha, April 17.—Trade in all lines shows some improvement, especially in dry goods, boots and shoes. Collections are above the average.

Sioux Falls, April 17.—Wholesale houses report a good many orders, but small in amounts. Farmers are busy, with seasonable weather and good prospects.

Southern Cities.

Charleston, April 17.—Business in all lines closes very quiet. Collections are only fair.

Savannah, April 17.—Trade and collections, wholesale and retail, are reported fair. There is an increase in receipts of rosin and turpentine. Shipments of each are about the same. Spirits are steady at 25½c. Rosin is firm.

Atlanta, April 17.—Trade is fair; collections good.

Augusta, April 17.—Trade in all lines is quiet, especially in groceries. Collections are not satisfactory.

Jacksonville, April 17.—No change is noted over last week.

Birmingham, April 17.—Business is somewhat dull. State elections during week had a tendency to depress trade.

Chattanooga, April 17.—Trade is about the same in most lines. Collections are satisfactory. More merchants than usual are discounting bills.

Nashville, April 17.—Jobbing trade is naturally quiet at this period. Retail trade is picking up under the influence of good weather.

Memphis, April 17.—General trade shows a slight improvement, especially in clothing, hats and caps.

New Orleans, April 17.—Jobbers and dealers in wholesale lines complain that business is totally neglected for interest in state elections, which take place next week. There is only a moderate movement in cotton. Holders of sugar are marketing slowly at the advance. Some improvement is noted in demand for rice. There is a fair export movement of corn by river only.

Galveston, April 17.—Trade is light in all branches. Collections are poor.

Pacific Coast.

San Francisco, April 17.—Little change is reported in commercial lines. General business is quiet, though prices steady. Wheat freights are firm. There is considerable foreign demand for lumber. Wheat for shipment is active and higher. Collections are slow.

Portland, April 17.—The vessel now loading lumber for foreign ports will carry 2,650,000 feet, all being the product of local mills. Although there has been some improvement in the lumber trade, the volume is not so large as was expected. Wholesale and retail trade in general remains quiet and unchanged. Collections are fair.

Seattle, April 17.—Seeds, hardware, paints and oils show reasonable improvement; otherwise general trade remains about the same as last week.

Tacoma, April 17.—Local trade continues to show improvement over last month. A cargo of flour for Africa, and another of lumber, flour, cotton, condensed milk and machinery for the Orient, clears this week.

Canada.

Toronto, April 17.—Wholesale trade is improving slowly, there being an increase in the sorting-up orders in several branches. Prices generally are steady, while remittances are backward.

Montreal, April 17.—Conditions of trade in this province have been unfavorable. Country roads are breaking up, and in some instances travelers have been called in. Warm weather has stimulated retail dry goods, and city trade is fairly good. Collections still unsatisfactory. Quebec city shoe manufacturers are not busy. The export lumber business promises better results shortly. The stock in England is reported light.

Halifax, April 17.—More favorable weather conditions have somewhat stimulated general trade, but remittances from the country are still slow. There is no improvement to report in the fish business, and at present the outlook in that line is not satisfactory. Advices from St. John, N. B., indicate an average amount of business done, with collections about the same as usual this time of year. The cut of logs has been large this winter, and the lumber business is opening up well, with shipments up to expectations.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500

Dry Goods.

[Special to BRADSTREET'S.]

The excellent weather this week is helping the retail movement and thus proving beneficial to the general market. Business with first hands is yet slow, however, and cotton fabrics are feeling the effect of the many months of overproduction. Buyers have the best of the market, and are usually able to get concessions in price where they need supplies. The recent large sales at cut prices has tended to reduce the surplus, but there are yet large stocks ahead of many classes of goods that

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

tend to prevent any improvement. Printed fabrics are slow outside of some specialties that have been good the whole season. Ginghams are quiet and more or less depressed, except on the basis of cut prices. Dress woolens are more quiet with agents, but fair orders for fall have been booked. The jobbing movement is moderate. Men's-wear woolens are dull, with conditions very unsatisfactory and much machinery idle.

Wool.

[Special to BRADSTREET'S.]

The market continues dull and the demand is yet of a moderate character. Sales show some increase, but it is due in large part to the fact that some low bids on domestic wools have been accepted. Territory wools have sold on the scoured basis of 30c. for fine medium and fine, while strictly fine would be hard to place above 30@32c. as to staple. Fleece wools are entirely nominal in price and in buyers' favor to sell. Australian wools hold firm, however, owing to the strong foreign situation, about 400,000 pounds being sold in Boston this week to be shipped to Europe. Dealers look for no more of these wools to be brought forward this season, except those now on the way, without the market improves, as even at a 10 per cent. decline in London, which is not probable, they could not be bought for this market except at a loss. The next London sale commences April 28, with about 208,000 bales on offer. Carpet wools are dull. The bark Celina from Rossonio, with 845 bales Cordova wool, arrived in Boston last week with the cargo damaged by water. The wool has since been sold for the best bid at private sale.

Cotton.

Exports of raw cotton during March and the seven months ending March 31, 1896, with comparisons for last year:

	Bales.	*Pounds.*	*Values.*

SOUND CURRENCY AND THE GOLD OUTPUT.

The New York correspondent of the Philadelphia *Ledger* writes to that paper as follows: "Henry Hentz, chairman of the sound money committee of the Chamber of Commerce, has recently been in Chicago, Boston and Washington. As a leading cotton merchant he is in constant correspondence with people in the south. As president of the Coffee Exchange he has business connections of another kind, and he is also prominent in the reform movements in Brooklyn. No one could be better posted than he as to the present outlook for sound money. He takes an optimistic view of the situation without, however, depreciating the strength of the opposing forces. * * * 'Speaking as a business man,' he said, 'I firmly believe from what I have seen and heard, and I have lately been in conversation with business men and public men, from Cabinet officers down, in different parts of the country, that in case one of the two great parties takes a stand for sound money, and the other straddles the issue, the sound money platform will win. * * * Thousands of Republican business men will vote for a sound money Democrat if their own party platform wavers or quibbles on the subject. On the other hand, Democratic business men will vote for a sound money Republican if their convention is captured by the free silver men. * * * Business men, as a whole, regard the money question as the issue of the hour, and want it settled now, once and for all time. With a verdict in favor of sound money they believe there will be a revival of confidence and prosperity. The forces of free silver are making their last stand, but I believe they will be defeated. The increased production of gold,' added Mr. Hentz, 'is bringing the two metals closer together, and will enable us, I think, to carry our present stock of silver safely, but we can't stand any more. The *Financial Chronicle* recently showed that the world's production of gold in 1882 had fallen to $100,000,000, that it increased very slowly up to 1888, but since then the increase has been rapid, owing to the new methods of treating low grade ores. There are some mines in Colorado that can be worked at a profit that only produce one-quarter ounce of gold per ton. In South Africa, if it were not for the cyanide process, according to a leading metallurgist in this country, its production of gold would not have been one-third of what it has been. The world's production of gold during 1895 is estimated at $200,000,000. The prospects are that by 1900 it will be $300,000,000. Therefore there will be no scarcity of the yellow metal; in fact, there may be complaints then of its being too plentiful. A Texas friend of mine recently informed me that he was converted to the gold standard during a visit to Mexico. A banker in that country made him understand that our country would make a fatal mistake if it permitted the free coinage of silver. He said the $600,000,000 of gold coin in the United States would practically be demonetized if a free coinage silver law should be passed, as gold would become merchandise. A frightful panic would ensue, as, with the present facilities in the United States for coining silver dollars, it would take twenty years to replace with silver dollars the amount of gold coin that would cease to circulate as money, and even if it were admitted that the whole amount of silver dollars could be coined within a few years, the danger would be as great.'"

THE DEPRESSED WOOL TRADE.

The New York *Textile Manufacturers' Journal* of April 11 printed a summary of the returns received from manufacturers in response to 1,500 circular letters sent out inquiring into the present condition of the woolen and worsted industries of this country.

"The showing made indicates a condition that is distressful. While the figures indicate a bad condition, the paper adds, they are far from showing the actual condition, as many of the mills now in full operation will be closed down in a short time, a great many manufacturers preferring to run full and complete their orders rather than run on part time.

"An analysis of the figures received shows that in woolens 256 mills reported, of which 131 are running full, 64 are closed entirely, and 61 are running on fractional time. Out of a total capacity of 16,572 looms, 11,508 are still in operation. They are running on an average of 49 hours per week, or 82 per cent. of their full time. The full complement of employees for these mills is given at 42,287, of which 27,206 are at present employed. The pay rolls, compared with those of 1892, show an average reduction of 18.8 per cent.

"In dress goods 25 mills have reported, with a total of 3,011 looms. Of these only 1,933 looms are in operation; 4 of the mills have closed down entirely and 3 are running on reduced time, averaging 46 hours per week. Complement of employees, 4,934; now employed, 3,287. The pay rolls, compared with 1892, show an average reduction of 23 per cent.

"In carpets 17 mills report a total of 2,296 looms, of which 1,802 are in operation; 4 mills are on reduced time, averaging 45 hours per week, giving an average for the total number of mills of 52.5 hours per week. The total complement of employees is 8,533; now employed, 6,891. The pay rolls, under the same comparison, show an average reduction of 18.9 per cent.

"In blankets and flannels 41 mills report 1,462 looms, of which 1,299 are in operation; 9 mills are closed utterly and 3 are running on reduced time, averaging 36⅔ hours per week, giving a general average of 48⅓ hours per week for all the mills in operation. Out of 3,148 operatives but 2,790 are at present employed. The pay rolls show an average reduction of 13.9 per cent. when compared with those of 1892.

"Three mills employed on shawls reported. These have a total of 77 looms, of which only 26 are in operation. One mill is on three-quarter time, or 45 hours per week, giving a general average of 52½ hours per week for all the mills. These mills employ 350 men; at present but 240 are at work. These mills did not report as to their pay rolls.

"Two mills reported on woolen skirts with a total of 21 looms, employing 50 operatives; these mills are both running full. No reports received on the comparative pay rolls.

"Forty-two mills on yarns reported with a capacity of 266 cards and combs, 200 of which are in operation. Eight mills are closed, 13 are running on reduced time, averaging 38.3 hours per week, giving a general average of 49.1 hours for the mills in operation. The total capacity in operatives is 3,629, of which 2,827 are at present employed. The pay rolls, compared with those of 1892, show an average reduction of 16.5 per cent.

"Forty-eight mills have reported on knit goods. These have a total capacity of 316 cards and combs, 204 now being in operation. Eleven of the mills have closed, and 8 are on reduced time, averaging 45 hours per week, giving a general average of 52½ hours per week for the mills in operation. The total number of operatives is 8,668, of which 5,718 are at present employed. The present pay rolls show an average reduction of 15.7 per cent. compared with those of 1892."

ECONOMY IN COAL MINING.

The Ashland (Pa.) *Telegram* is authority for the statement that "the Philadelphia & Reading Coal and Iron Company are about to begin an experiment at the old Girard colliery, located east of Girardville, which was recently abandoned, that will be watched with interest in mining circles, though the final result may not be known for some years to come, and which will, if it is proven that it can be done successfully, have an important bearing upon the coal mining industry in the future. This mine, which is located on the lands of the Girard estate, is worked out so far as it is possible to get at available coal. Many large pillars have been left standing because it was too dangerous to try to work them, in fact, almost impossible to do so, and, as has been the case in many mines throughout this region, much valuable coal has been lost. In his annual report, Herbert S. Thompson, engineer for the Girard estate, estimates that the amount of coal left standing in these pillars is about 35 per cent., and it is thought that fully 50 per cent. of this coal can be recovered. To do this it is proposed to bore holes into the workings and then allow them to fill up with silt, or fine coal dirt, which will penetrate to all parts of the workings, as it will be thoroughly saturated with water to make it run freely before it enters the surface openings. This silt will get very hard in time to come, when it is proposed to again open up the old mine and drive gangways through the silt, and thus reach the coal that is left standing at the present time. The question has been thoroughly discussed by the mining officials and the Girard estate, and they regard the plan as a practical one. It has already been tried in a small way at one of the Reading collieries in the Shenandoah district, and with successful results. The success of this experiment will have an important bearing upon the coal industry of the entire coal field, as it is well known that in many of the worked out mines much valuable coal has been left standing, owing to the fact that it was not only dangerous to try to get at it, but also because it was too expensive for the operators to do so with any reasonable prospect of profit."

THE BICYCLE INDUSTRY.

The St. Louis *Globe-Democrat* says: "The only bicycle patents now in force are those covering specialties. Approximately 1,000 'makes' of wheels are at present produced in the United States. Some, a very few, of the great establishments, where nearly 100,000 mounts are placed on the market annually, themselves manufacture nearly every part which goes into the construction of the machine. But the vast majority of factories purchase nearly every part from some special source, machining the drop forgings, and fitting and finishing the partly prepared material. Ten thousand dollars, a machine dealer informed the writer, would equip such a factory, while a bicycle dealer stated that $3,000 would suffice for a good start. One master mechanic is needed.

"With the steady and tremendous demand for wheels, and the prices at which they continue to be listed, the incentive to a launch into the business of bicycle-making is showing its results in the marvelous increase in the number of factories, and in the capacity of those that are established. About 1,000,000 wheels will be placed upon the market and probably sold this spring and summer, representing an outlay by wheelmen of over $50,000,000.

"How soon the revolution in prices will come is a matter of much speculation among riders. A representative of one factory stated to the writer that it would not be inside of two years. The cost to the manufacturer is believed by many, on grounds satisfactory to themselves, to be between $10 and $20. Those handsome catalogues and a vigorous policy in advertisement add quite an increment, and allowance must be made for the guarantee. The wholesale dealer—the houses representing the factory in different sections of the country—comes in for a good share, while the retail dealer makes only 25 to 35 per cent. Then, perhaps, a majority of wheels are bought on time. So great an inroad has been made on the jewelry business by the popular expenditure for wheels that an appreciable proportion of the jewelers have placed bicycles on sale beside their watches, and every hardware man must, of course, handle them.

"Another effect of the bicycle's advent is the appearance of rubber tires on carriages. The most important, of course, is the effective impulse given to the good road movement. As a common pleas judge remarked to the writer: 'The time has come when, in the construction of public roads and streets, first thought must be given to the needs of the light vehicles which are soon to represent the predominant interest.'"

ENGLAND'S FINANCES.

The heavy increase in the revenues of England, which are chiefly from the new death duties and indirectly from the speculation in the Kaffir stocks, illustrate the diversity of English taxes. The surplus for the year ending March 31, which was estimated at $30,000,000 two months ago, it is now thought will reach $37,500,000. This amount and much more will be spent in new ships and in improving harbors. Just at this time the English press is full of forebodings of war, inspired no doubt by the government, in order to make it appear to the public that the disbursements are necessary. The London *Statist* apparently expects war with America and Germany at least, and numerous minor outbreaks in the English possessions in Africa and Asia. The surplus is practically already more than spent. The gross debt of the United Kingdom, it is estimated, will be £653,500,000 at the close of this fiscal year. There has been some attempt at lessening the mountains of debt under which England groans for more than about thirty years. The debt in 1866 was £809,400,000, in 1876 it was £776,200,000, in 1886 it was £745,000,000, and in 1895, a year ago, £660,000,000. The following table gives the items of England's debt for ten years:

	Funded debt.	*Terminable annuities.*	*Unfunded debt.*	*Gross liabilities.*
1895	£586,016,000	£53,583,000	£17,400,000	£660,160,000
1894	587,631,000	57,077,000	21,446,000	665,104,000
1893	589,533,000	60,761,000	20,748,000	673,647,000
1892	577,944,000	64,422,000	35,313,000	680,542,000
1891	579,472,000	68,459,000	36,140,000	685,954,000
1890	585,960,000	71,732,000	32,252,000	690,664,000
1889	607,058,000	75,279,000	16,093,000	699,301,000
1888	609,741,000	78,449,000	17,385,000	706,727,000
1887	637,637,000	81,123,000	17,517,000	738,779,000
1886	638,850,000	85,830,000	17,602,000	745,040,000
1885	640,182,000	86,116,000	14,033,000	743,125,000

BRITISH INDUSTRIES REVIVING.

A late issue of the London *Times*, says the Philadelphia *Press*, "has a three column article on 'A Great Revival in a Great Industry,' after years of long gloom, which gives an account of the results of the Democratic tariff of 1894 in Bradford. The *Times* says the depression and gloom in the Bradford district culminated 'in the four years 1891–94, during which American protectionism found its fullest expression in the McKinley tariff.' At last the change came, and the *Times* says 'no slight or grudging compensation was in store. Full measure, pressed down, shaken together and running over, was the installment of payment made by the world to Bradford last year for her long continued troubles and losses.' The *Times* continues: 'Roughly speaking, the Wilson tariff, which came into effective operation in the last month of 1894, in place of the strangling system of duties associated with the name of McKinley, reduced the custom house charges upon the principal products of the Bradford district imported into the States from 100 per cent. of their value to 50 per cent. This reduction enabled the American merchants and wholesale dealers to replenish their stores at prices greatly lower than those which had ruled during the previous four years. Then the possibility of obtaining at reasonable rates clothing, which, always highly valued, had become exceedingly scarce and dear, gave a great stimulus to the normal demand in the United States, so that the replenished wholesale stocks were rapidly cleared out and fresh supplies were urgently called for. Thus it came about that the value of worsted coatings imported from the Bradford district into the United States in the first five months of 1895 was more than double that of the like imports during the whole year, December, 1893, to November, 1894, and the value in dollars for the whole of 1895 as compared to the whole of 1894 (years ending September 30) was $7,575,052 against $1,275,626, being an increase of all but 600 per cent.'"

EUROPEAN WATERWAYS.

A London dispatch states that Colonel William Ludlow, military attaché of the American embassy at London, recently sent by the government to inspect the various European canals, with the view of reporting their working in comparison with the proposed Nicaragua Canal, said regarding his inspection: "The inspection proved a laborious, though interesting undertaking. I have thoroughly inspected the Suez Canal, and the officials of that company did everything to facilitate my inquiries, and placed a steam yacht at my disposal that I might thoroughly see its working. It is a wonderful success. There is hardly any other enterprise in the world, regarded purely as a commercial investment, that is yielding so large a return. Its profits must be enormous. In fact, no one knows exactly what they are. Take England's share in the concern, for instance. While England does not own a majority of the shares, yet its income from this source alone would suffice to maintain some kingdoms. You know that the canal was not a success at first, but now it proves one of the most useful and successful schemes of the century. I also went to Greece and witnessed the working of the Corinth Canal. While entirely different both in aim and construction, it is still a success. It is a most interesting work. The original scheme for a canal here was conceived in the time of Nero, and one may yet see the original test pits that were made by the Romans. I also thoroughly inspected the new German canal. This is a wonderful affair, and Germany can now use her navy in both seas. I had an audience of the Emperor in Berlin, and told him that the German canal was the only one that had been constructed within the original estimates of costs. From Germany I went to Holland and thoroughly inspected their system of waterways. I have yet to visit the Manchester Ship Canal, and possibly the Caledonian Canal in Scotland. Then I shall submit my report to the government at Washington."

Asked as to his opinion of the feasibility of the Nicaragua Canal after viewing the workings of the others, Colonel Ludlow said: "I am more than ever convinced that it is feasible. But until my report is submitted I am unable to make any detailed statement."

FINANCIAL.

Northern Pacific Reorganization.

NEW YORK, PHILADELPHIA AND BERLIN, April 4th, 1896.

Holders of two-thirds in amount of the undermentioned bonds, certificates and notes, having, in person or through their representatives, already accepted the plan and agreement of reorganization dated March 16th, 1896, all holders of outstanding

Northern Pacific R. R. Company's
General Second Mortgage Bonds,
General Third Mortgage Bonds,
Dividend Certificates,
Consolidated Mortgage Bonds,
Collateral Trust Notes,
Preferred Stock,
Common Stock,
AND
Northwest Equipment Stock,
AND
Trust Company's Receipts for the above described bonds,

are hereby notified to deposit their holdings with any one of the undersigned on or before Thursday, APRIL 23D, 1896, receiving suitable certificates of deposit therefor.

Deposits after that date, if accepted at all, will be subject to such terms and conditions as may be imposed by the Managers.

Holders of certificates heretofore issued by the Mercantile Trust Company of New York for Bonds deposited under the Bondholders' Agreement of February 19, 1894, not already stamped by us as assenting to the plan and agreement of March 16, 1896, are hereby notified to present their certificates at one of our offices on or before Thursday, April 23d, 1896, in order that we may stamp their approval thereon. The Managers have the right, which at any time hereafter, in their discretion, they may exercise, to exclude absolutely from the plan any holders of such receipts who shall not conform to the requirement to present their receipts for stamping, as expressly assenting to the plan and agreement.

The cash payments in respect of stock will be payable upon dates hereafter to be announced.

Security-holders are invited to obtain from us copies of the plan and agreement, as all depositors are bound thereby. Many features of much importance to security-holders are therein set forth.

Any further information connected with the reorganization, desired by security-holders, will be furnished on application at any of our offices.

TO THE BONDHOLDERS OF THE
Northern Pacific & Montana Railroad Company
AND THE HOLDERS OF
Knickerbocker Trust Co. Receipts therefor.

NEW YORK, April 8th, 1896.

The undersigned Committee, after negotiation with the Northern Pacific Reorganization Managers, has arranged with the latter that, pursuant to the provisions of page 14 of the Plan of Reorganization of the Northern Pacific Railroad System, the bonds of the Northern Pacific & Montana Railroad Company may participate in such reorganization, receiving for each $1,000 present bond, with all unpaid coupons attached,

$500 in the new 3 per cent. General Lien Bonds, bearing interest from January 1st, 1897,

$500 in the New Preferred Stock Trust Certificates of the reorganized Northern Pacific Railroad Company.

Holders of bonds of the Northern Pacific and Montana Railroad Company, or of Knickerbocker Trust Company Receipts therefor, in order to participate in this arrangement, are notified to deposit their bonds or receipts with Messrs. J. P. MORGAN & CO., 23 Wall Street, New York, not later than APRIL 23d, obtaining in exchange therefor suitable reorganization certificates to be issued by them. Bonds or receipts not so deposited may, at the discretion of the Reorganization Managers, be excluded from the benefits of this arrangement.

The undersigned committee are unanimously of the opinion that prompt acceptance of the foregoing proposition is for the best interests of all bondholders or receipt holders.

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, APRIL 25, 1896.

The question of the date of adjournment has engaged the attention of Congress during the week. At a conference of Republican senators it was suggested, apparently with general acquiescence, that the session of the Senate might be conveniently brought to a close shortly after the middle of May. A better notion as to the likelihood of adjournment at that time will be gained when the committee appointed at the conference to arrange an order of business shall have made their recommendations. The House seems to be kept well in hand by the Committee on Rules, and, in all probability, there is less likelihood of delay on the part of that body than on the part of the Senate. The appropriation bills for the session will pass the half billion mark, their total amounting to $505,079,410, of which $374,613,449 is called for by general appropriations.

The week was rendered notable in Washington by the meeting there of the National Arbitration Convention, which was projected some time ago. The personnel of the gathering was distinguished, comprising, as it did, some of the most distinguished men in public life in the United States—not, it is true, men distinguished in what is usually designated as politics, but men of mark in diplomacy, in education, and as regards their general public influence as citizens. The proceedings were fittingly opened by the veteran diplomat, ex-Secretary of State Foster, who expressed his pride at the record which our country has made in the past half century of unbroken peace with all the nations of the earth, and at its steady adherence to the settlement of international differences by the pacific method of arbitration—a record almost without parallel among the nations of the earth. The convention, he said, had not assembled to recommend to the government any new departure in its policy on this subject, but rather to strengthen and confirm it in the policy so long and so consistently followed.

Ex-Senator Edmunds, long distinguished as one of the sanest and most conservative men in public life in the United States, was made permanent chairman of the gathering. In his address he declared that the United States was one of the strongest nations in the world. It had the least reason of any great nation, in a mere selfish sense, to wish for arbitration, being strong enough in any but the most absurd cause to defend itself, to promote its policies and to carry on war, but its very strength impelled it to be backward. After listening to a number of other addresses, the convention adopted a resolution providing for the selection of a permanent committee of twenty-five members, who were at once appointed. Subsequently, the convention adopted resolutions declaring that religion, humanity and justice, as well as the material interests of civilized society, demand the immediate establishment of a permanent system of arbitration between the United States and Great Britain, and the extension of the opportunity afforded by the system to all civilized nations at the earliest possible day.

The resolutions also earnestly recommended to the government of the United States, so soon as it is assured of a corresponding disposition on the part of the British government, to negotiate a treaty providing for the widest practicable application of the method of arbitration to international controversies. In compliance with one of the resolutions adopted, a committee was appointed to prepare and present to the President a memorial respectfully urging the taking of such steps as will best conduce to the end in view. The work of the convention should not be without influence both here and abroad. The position of the United States regarding the desirability of substituting arbitration for war has long been well defined, having been set forth with clearness by both the national legislature and the national executive, and there should by this time be no misunderstanding in regard to it. If the same attitude should be adopted elsewhere, the reign of peace would not be long delayed.

Thus far, in the Republican party, the first in the field, the sound-money men are holding their own as regards the planks in the platform, though locality has much to do with the form which the declarations on the monetary question take. For example, the Maryland Republicans declare their belief in the gold standard as the basis of the circulating medium and their opposition to the free and unlimited coinage of silver until an international agreement of the important commercial countries of the world shall give silver a larger use. The Connecticut Republicans declare themselves unalterably opposed to the issue of unsecured paper currency, either by the government or the banks, or the free coinage of silver, at any ratio, and favoring a single standard of value—and that standard gold—believing that this policy, with a sound and stable currency upon a gold basis, will furnish sufficient revenue to meet all requirements of the government and properly support it. In Tennessee a less vigorous plank was adopted, the convention declaring itself unalterably opposed to any scheme that will give the country a depreciated and debased currency in favor of the use of silver as currency, but to the extent only that its parity with gold will be maintained, and, in consequence, are opposed to a free and unlimited and independent coinage of silver at a ratio of 16 to 1, believing that every American dollar should be an honest 100-cent dollar always and everywhere. The Pennsylvania Republicans have adopted a declaration in favor of international bimetallism, and until that can be secured, opposing the coinage of silver except upon government account, and demanding the maintenance of the existing gold standard of value.

So far the expressions of judicial opinion in regard to the Raines law have been in favor of the constitutionality of the act. The first decision rendered by Judge Pryor was in favor of the constitutionality of the law. His view has now been sustained by the Appellate Division of the Supreme Court. The main question raised in the case was disposed of by the declaration that the fourteenth amendment to the federal Constitution does not impair the police power of the state; that it is competent for the state to forbid all liquor traffic within its borders, and that, possessed of this extreme power, the legislature may exercise the lesser one of regulation. If, the court says, diversity arises in the application to particular localities of any of the incidents of the law, the legislature is not incompetent to authorize that diversity. It is part of the general scheme. It arises from the necessity of treating local conditions and situations as they are found, and from the recognition of patent facts, such as that there are striking differences between the retail traffic in liquor in a great metropolis and in a remote rural neighborhood, or even in separate parts of the same municipality, and that disproportion must, of necessity, be allowed in the impost exacted for the privilege of engaging in such traffic in each of such places. All such provisions come within the one general act as part of one general excise system and the regulation thereof. That the purpose of the law is not primarily to raise revenue from taxation is apparent, the court says, from the prominence given to the local-option feature. Taxation is but an incident, and that not the chief, though a necessary element. Regulation of the traffic is the fundamental purpose, and the power to regulate necessarily includes the power to tax.

Some doubt was felt as to the probability of the Greater New York bill passing the Assembly, owing to the fact that the majority in its favor was reduced in the Senate in consequence of the vetoes of Mayors Wurster and Strong. That doubt was set at rest on Wednesday, when the bill passed the Assembly by a majority of nine votes. The measure now goes to Governor Morton, who is generally expected to sign it. There can be no doubt that the repassage of the bill over the vetoes of the mayors will weigh greatly with him, particularly in view of the fact that, while differing upon the question of methods, the trend of general sentiment has been in favor of consolidation in the abstract. It is worthy of notice that the leading journal in Brooklyn has accepted the vote in the Assembly as conclusive, and, while reiterating its belief in the attitude held by it during the controversy, it declares that Brooklyn, from the result reached, should and must reap consequences of welfare and happiness, and that to that end all lately divided on the matter should unite to gain for the city all the good possible under the circumstances attained.

It is not yet quite six months since the present French ministry came into power, and already it has come to an end. This result was brought about by the attitude of the Senate in refusing the appropriations necessary to continue the troops in Madagascar. The resignation of the ministry was announced on Thursday, when the Premier, M. Bourgeois, read a statement contesting the right of the Senate to overthrow a ministry, or to be the sole interpreter of the constitution, but saying that in view of the impossibility of securing proper military reliefs for Madagascar the cabinet was compelled to resign. Changes in French ministries have grown to be so frequent that they attract comparatively little attention, and if the fall of a ministry were all that is involved the situation would attract comparatively little attention abroad. Of late, however, ministerial crises have tended to develop into presidential crises, and there are intimations that this promises to be the outcome of the present situation in the French republic. It appears that the President contemplates taking up a stand against the Senate on constitutional grounds, with what prospect of success must be determined by the events of the near future.

THE FOREIGN EXCHANGE SITUATION.

While another shipment of $200,000 gold was made to Europe this week by the same banking house which had already sent $1,300,000 out of the country since the beginning of the present month, the condition of the foreign exchange market and the general tendency of money both here and abroad do not lead to the conclusion that any heavy movement of specie need be anticipated. The circumstances in connection with the gold-shipping transactions of the last few weeks have already been discussed at some length in these columns. Nothing whatever of a tangible character can be added thereto at present. Even in London there is some doubt as to whether the movement in question was due to arrangements between German banking firms and the Russian Treasury, or simply to what are called three-cornered transactions in exchange, having in this connection relation to the recent placing of Chinese or other loans with German houses.

It is important to observe, however, that in spite of the absence of any supply of commercial bills drawn against exports of grain and other commodities, the foreign exchange market gives no evidence of a tendency to harden. During the present week, and, indeed, for a fortnight past, the rate for demand sterling on London has been at or below 4.88¾, and in the early part of the present week it suffered a further sharp decline to 4.88¼. The figures named are below the point at which gold could be exported with profitable results to the bankers making such shipments, and though continental bills have been relatively firmer, their position would not be calculated to encourage transactions of such a character. Of course, under present circumstances, the payment of a premium or inducement might result in a specie outflow, as was the case while the Austrian government was replenishing its gold reserves at the expense of those of our own Treasury. The limited character of the shipments that have taken place so far this month would, however, indicate that there is no large inducement of this kind, and that if any further movements of this kind occur they are likely to be of the same desultory and limited nature.

The feature which attracts attention in the foreign exchange market at present is the presence of fairly large amounts of loan bills. It has been noted for several weeks past that representative foreign banking houses were willing to put out money on time, the process including the sale of a sufficiency of bills of exchange to realize the sum loaned, at rates very close to those which were acceptable to lenders here. It would seem, indeed, that in many cases the terms offered by the lenders of foreign money, owing to the pressure of idle funds which now exist in London, were more acceptable to borrowers, and that from day to day considerable dealings of this kind had been effected. Indeed, it is learned from a number of sources that while this foreign money is held at 4 per cent., or better, and while in a number of cases local lenders have been willing to shade the rate for accommodation on collateral ranging in time from three to six months, the foreign bankers have obtained an advantage through their readiness to accept collateral which is not always looked on with favor here. The information on this point is that the sole requirement of foreign lenders for some little time has been that collateral should possess an active stock exchange market, while the recent tendency in financial circles locally has been to subject collateral to such class of loans to more or less scrutiny.

Estimates as to the volume of transactions of this class are necessarily indefinite. There are no statistics of the subject, and the only guide that can be obtained to the amount of the business that has been effected since the beginning of the month is the tendency of the exchange market acting under the influence of supplies of this class of bills. The record of the present month with respect to gold shipments can scarcely be gauged in advance, owing to the fact that there is considerable irregularity in the record of such transactions in previous years. Last year, as referred to in these columns two weeks back, the gold shipments amounted to $2,800,000 during the month of April, while in April, 1894, they were no less than $11,700,000. It will thus be seen that while at present foreign capital is coming this way in the form of loans, the gold shipments for the month have already reached a total approximating to that of the same month last year, when foreign capital had scarcely begun to move in this direction, even through the medium of a demand for bonds and securities, which attained some little magnitude during the late spring and summer of that year. Reference was made in BRADSTREET'S last week to the change of sentiment in foreign markets with regard to American stocks and bonds, and its effect in arousing a bullish temperament on the part of our own speculators. This tendency has not relaxed to any extent during the present week, in spite of the disturbing influence of the French Cabinet crisis and the South African troubles upon the British investment market generally. At the same time it must again be said that, apart from limited investment purchases, mainly restricted to high-grade bonds, London has not, as yet, shown any great avidity for our securities, particularly for the more speculative classes. The arbitrage transactions between the two markets would show, unquestionably, a balance in our favor, but the volume of such dealings would not be sufficient to depress exchange to the point above referred to unless it had been supplemented by the above-mentioned lending of foreign money upon stock and bond collateral. This, in its way, is a token of confidence, and is just as effective as if the London public were indulging in a mild speculation in "Americans." We may also congratulate ourselves that the tendency to sell our securities has also ceased, and that even if a demand on a large scale has not set in, we are no longer exposed to the danger of heavy foreign sales, which proved such a potent reason for gold withdrawals in the years succeeding the crisis of 1890.

THE JOINT TRAFFIC HEARING.

While the new combination of the trunk-line railroads cannot, as yet, be regarded as a perfect institution, it would seem, nevertheless, that its operations have been regarded thus far with a great deal of satisfaction by railroad and investment interests. Some rate-cutting has undoubtedly occurred within the trunk-line territory since the first of January, when the Joint Traffic Association agreement went into effect, but it has been upon a much less serious scale than that which used to be chronic in its manifestations. The opening of lake navigation, which was formerly the signal for a universal demoralization of through rates, has this year passed without any serious outbreak, and the anticipation is that though rates throughout the remainder of the season will not be high, they will, at least, be uniform. Reference was made in these columns, some time ago, to the dissatisfaction of certain smaller lines with the rigidity with which the authorities of the association, backed by the larger roads, were insisting upon the holding of the agreement, but this is, of course, in itself a tribute to the efficiency of the new order of things. Similarly, shippers who were benefited by the previous bidding for business by one road against another are, perhaps, somewhat disgruntled, though the underhand concessions which were customary in such cases were the most fertile cause of both demoralization of rates and violations of the provisions of the Interstate Commerce law. The recent decision of the Supreme Court in regard to the liability of guilty parties to testify as to infractions of the law has placed a weapon of no small effect in the hands of the authorities of the trunk-line combination, so that there has been, naturally, a very hopeful feeling in railroad and investment circles that we should have a period of stability in the rate situation.

In other ways the Joint Traffic Association is proving its usefulness. The organization has lately taken up a question of great interest to the mercantile and shipping community at eastern cities, namely, that of the differentials allowed on grain carried from the west to Baltimore and Newport News. New York in particular is greatly interested in this question, and the fact that the rate from Chicago to the latter city per 100 pounds is 20c. as against 17c. to Newport News has resulted in considerable diversion of business to the southern ports of export. The managers of the Joint Traffic Association are now wrestling with this problem, although its solution is necessarily one of great difficulty, and the grain-shipping interests are, of course, taking an active and interested part in the controversy.

Under these circumstances, no small amount of attention is being paid to the hearing now in progress in the United States Circuit Court in this city of the application brought by the United States District Attorney of this district for an injunction against the Joint Traffic Association under the so-called Anti-trust law. The case which has just been begun before Judge Wheeler engages the services of some of the foremost counsel in the country, and the hearing with the arguments presented by the eminent legal gentlemen engaged are being reported in full in the daily newspapers, a circumstance which points to the extent to which public attention is centered upon the matter. Reference has already been made to those procedings in these columns. They seem to be the outcome of pressure brought upon the law department of the government by various interests, which labored under the impression at the time the new association was formed that its operations might involve serious danger to public interests, or interfere, more or less, with the advantages which individuals and communities enjoy under a system of unrestricted competition in rates for railroad transportation. The real situation, however, would appear to be that whether because, or in spite of, the Interstate Commerce act, the whole railroad business was demoralized by secret violations of law and by underhand cutting and demoralization. The officials of the railroads themselves, disliking the necessity under which they constantly found themselves of taking dishonest means to protect the interests of their corporations, decided to attempt the great task of forming an agreement that would not be broken. To this agreement no less than thirty-two distinct railroad systems were parties. The attempt in the first instance has been apparently successful. The warring roads have been brought into harmony, and the worst forms of rate-cutting and discrimination have practically disappeared under the influence of the new arrangement. It remains to be seen whether the courts will find that in so doing the railroads have been guilty of a violation of law. If so, it will certainly necessitate a return to an order of things deplorable from the point of view of the railroad manager and the investor, while, as often pointed out, it is difficult to see how the prevalence of the old methods in connection with railroad rates is really beneficial to public interests, to which, indeed, stability and certainty in this connection are of more value than mere lowness of charges.

COMPTROLLER ECKELS ON SOUND MONEY.

Reference has already been made in these columns to the amount of Comptroller Eckels' contributions to the propaganda in behalf of sound money. It seems probable that before the national conventions shall have put forth their declarations upon the currency question he will have addressed the representatives of almost every important city in the Union upon the subject of our monetary standard. His latest appearance was at the city of Cincinnati, where he delivered a very clear and cogent address on the currency question to a large audience, comprising most of the prominent merchants and financiers of the city. Like all the Comptroller's addresses on the subject treated by him, that delivered at Cincinnati attracted the close attention of his audience, an attention which its lucidity and force easily commanded.

Mr. Eckels opened his address by saying that the conditions at present confronting the American business world are not the result of the causes which produced the crisis of 1873, 1884, and the reflex action of 1890, but their source is deeper, and their consequences, unless averted, must be more serious. The crisis of 1873 and the stagnation of the immediate years thereafter arose, he said, from excessive railroad building and overtrading following the war period; that of 1884 because of inflated credits and fraudulent banking, while the flurry of 1890 found its origin in the Baring failure in London. The crisis of 1893 and the business depression of to-day, he argued, can only be traced in the largest measure by the impartial investigator to a cause far different from either the one or the other. Instead of being the result of speculation and overtrading, it was due to legislation, which, in the first instance, gave new power to the advocate of the free coinage of silver, and, in the second, placed upon the Treasury's gold reserve a larger burden of redemption without in anywise increasing either the amount of the nation's gold or giving to the Secretary additional powers to adequately protect the same. There never were, he said, so large investments of foreign capital in the United States as in the years

immediately preceding 1890; there never have been so small ones as in the years since that date. It cannot, in the light of this fact, be argued other than that the silver legislation of that year accomplished what all the other currency heresies and follies of three decades could not do, and succeeded in creating for the first time a suspicion that the fiatist might yet control in the financial operations of our people.

After paying his respects to the advocates of the doctrine that the prosperity of a people depends upon or is gained by the great volume of its currency irrespective of other conditions, the Comptroller went on to speak of the agitation for the free coinage of silver, devoting his attention specially to the claim made by them that the end sought by them was the coinage of silver under the conditions which prevailed prior to 1873. A casual investigation would prove, he said, that they do not desire any such thing. The idea in the enactment of every coinage law from the establishment of the government to 1873 was to have the coins approximately of the same commercial value without the government's stamp affixed as they would be with it. A very small fractional difference was to be made in the coins simply to prevent their being too readily sent to the melting pot, and whatever increased value the stamped coin had over the unstamped metal was the result of the convenience arising from its use in business transactions.

Such was the situation formerly. It was never seriously suggested, Mr. Eckels said, by any advocate of the free coinage of silver until the present agitation that the commercial value of the metal should be disregarded and an artificial value fixed by law. It was to be remembered, he continued, that the ratio of 16 to 1 in 1896 was a very different thing from the ratio of 16 to 1 in 1873. The very fact that those who controlled this movement objected to adopting as part of their silver creed anything more from the coinage laws prior to 1873 than the mere figures of ratio was sufficient to prove that they were insincere in their demand for the enactment of a law similar to the earlier coinage acts. If not, they would accept the spirit and the reason of the law as readily as the bare ratio which they desired to take from it. The cause of their not doing so was to be found in the change in the relative value of the bullion value of a silver dollar during the interval. In 1873 the average value of the bullion in the silver dollar was $1.004. The first quarter of 1896 it was $0.5256. A careful calculation, he said, showed that pure silver was worth in 1876 only 89 per cent. of its value in 1872; in 1881, only 84 per cent.; in 1886, only 77 per cent.; in 1889, only 70.9 per cent., and in the first quarter of 1896, only 52 per cent. During the first five years it lost 11 per cent. of its value; during the first 10, 16 per cent; during the first 15, 23 per cent., and during the 24 years since 1872, 48 per cent. To make a show of fairness, the Comptroller continued, the advocates of free coinage must cease to insist upon the coinage of silver at any other ratio than that corresponding with its commercial value.

The Comptroller did not omit to urge upon his hearers, as he has so often done before, the necessity of retiring the greenbacks, which he characterized as the disturbing element in business and a plague upon the Treasury Department. Their payment and retirement, or even a measure pointing in that direction, and making certain that a beginning had been made, would evidence to the world that we had at last entered upon financial methods of a kind to commend us to the investor both at home and abroad. Mr. Eckels urged, also, that all the country's paper currency should be issued by the banks. He summed up his views upon the subject, as a whole, by saying that he considered the first and great essential to the return of prosperity to the American people the complete elimination of the free silver fallacy and the equally emphatic and unequivocal reaffirmation of our adherence to the single gold standard of value; that, as a part of that work, he deemed it necessary that the outstanding demand obligations of the government should be at the earliest practicable moment paid in gold and canceled, and that assurance thus be given that we have entered upon an era of financiering that is based upon correct and sound monetary principles. As contributing to all this, he added, every note of issue to circulate as money should be issued by the banks, and every bank that issues such a note should stand ready and capable to redeem the same in gold upon presentation.

THE "FRISCO" REORGANIZATION.

The plan for the reorganization of the St. Louis & San Francisco Railway Company, which was issued only a week ago, could not be adequately commented on in the last issue of this journal. It is, however, an interesting matter, not only because it is intended to accomplish the rehabilitation and restoration to solvency of one of the few of the large railroad corporations which still remain in the hands of the courts, but because the arrangement contemplates a severance of the relations which have existed between the property and the Atchison system. This latter phase of the subject is, indeed, eminently calculated to arrest attention. The sacrifice of branch lines and controlled properties is not an unknown feature of railroad reorganization. It was rendered necessary, and on a large scale, too, when the old Wabash was reorganized, and the interests which undertook the reconstruction of the Richmond Terminal system were also forced to exclude some portions thereof from the new Southern Railway. In this case it was supposed that the San Francisco would ultimately be included in the new Atchison system, and the plan for the latter's reorganization included a provision in the form of authority for the issue of additional bonds to provide for this object. It seems, however, that the negotiations which have been in progress for some time between the San Francisco bondholders and the Atchison have not resulted in an agreement which would be satisfactory to the latter and involve the retention of the San Francisco line in the Atchison system. On the contrary, the alternative which has been adopted consists in the purchase by the "Frisco" bondholders of the Atchison's holdings of some $5,000,000 of the company's 4 per cents. at a price somewhere in the neighborhood of 35c. on the dollar. The Atchison also sacrifices its interests in the stock of the "Frisco," which consist of $4,896,000 first preferred, $9,985,300 second preferred, and $11,896,000 common, all the stocks being wiped out by the process of foreclosure, which is to be adopted. In addition, the claims of the Atchison for advances will be canceled, the "Frisco" bondholders will withdraw all suits against Atchison, and the "Frisco" joint guarantee with Atchison of the Atlantic & Pacific's securities will be abrogated. It would seem from this that the Atchison makes considerable sacrifices, but it is apparently the belief of its managers that this is fully justified, in view of the still greater sacrifices that would be necessary if it had been decided to retain its control.

Under the plan there will be an issue of $50,000,000 new consolidated mortgage 100-year gold bonds in the San Francisco, $5,000,000 of 4 per cent. first preferred, $16,000,000 4 per cent. second preferred, and $29,000,000 of common stock, with control for five years vested in a voting trust. Of the consolidated bonds $39,072,000 are for prior liens, $5,500,000 for subscriptions by deposit bondholders, and $5,428,000 for branch line bonds, new construction, etc. The preferred stocks will be used for assessment and for subscription. There will be an assessment of 10 per cent. upon the consolidated bonds, for which first preferred stock will be given at 70. Fixed charges will be reduced to $1,994,330. An underwriting syndicate has been formed. The voting trustees are John A. Stewart, president of the United States Trust Company; Gen. Louis Fitzgerald, president of the Mercantile Trust Company; J. Kennedy Tod, Isaac N. Seligman and James A. Blair, of New York; Benjamin P. Cheney and David P. Kimball, of Boston.

USE OF CREDIT INSTRUMENTS IN BUSINESS.

One of the most notable features of modern commercial life is the extent to which credit instruments supply the place of money, properly so called. In his Cincinnati address this week Comptroller Eckels pointed out that the student of finance who observes the course of the commercial world cannot but be struck with the fact that the necessity for the employment of a metal money is gradually lessening, and must continue so to do as methods of business improve and the refinements of banking exchanges increase; that it is only wanted now as a standard of value, as a bank reserve, and as a means to settle international balances; that no one wishes gold or silver to keep and hoard except the miser, and that the clamor which is being raised as to the lack of money of ultimate redemption is for purposes of confusion rather than of argument. It would, he said, be both an impossible and an absurd undertaking to have a sufficient volume of redemption money in reserve or in circulation to redeem all the outstanding obligations of the world at once, and the same principle is to be applied in the matter of redemption which prevails in maintaining a reserve against bank deposits.

In reports of the Comptroller of the Currency in the past attention has been directed to the use of credit instruments in the daily transactions of the business of the country, but it is only recently that the office has undertaken to gather, systematically, information regarding the extent to which those instruments are used in trade. As our readers will remember, the results of such an investigation were made public by the Comptroller at the end of the year 1894. The investigation was made to cover the settling day nearest June 30, the end of the fiscal year, and its results were based upon information gathered from bank officials regarding the amount of different classes of money and of checks and other instruments of credit on deposit with them from retail traders. Replies were received from cashiers of about two-thirds of the total number of national banks addressed. Some slight misunderstanding prevented the receipt of quite as accurate returns as were intended, but, on the whole, the investigation was regarded as fairly representative of the character of the circulating medium in those places throughout the country which were sufficiently developed to have national banks.

Of the amount of retail payments covered by the returns it appeared that 58.9 per cent. were in checks and 41.1 per cent. in the various kinds of money, showing that nearly three-fifths of the payments were effected by means of credit instruments. The results presented some curious features, showing that such states as Mississippi, Virginia and Montana made use of a larger percentage of checks than such states as New York, Pennsylvania and Ohio. The cotton-growing states showed a large daily use of credit, as did in general the great grain-growing states of the northwest, and the percentage of retail transactions done on credit was larger in the south Atlantic and south central divisions than in the north Atlantic and north central divisions, while the western group of states held an intermediate position. One of the most striking facts brought out by the investigation was that the use of checks and other credit instruments did not increase with the density of the population, but that, on the other hand, some of the more densely populated states fell below those having a sparser population as regarded the use of the instruments in question. From this showing the Comptroller deduced the conclusion that the rate of increase in the use of credit instruments in retail transactions decreased relatively to the growth of population after a certain degree of density was reached.

The results of the investigation of 1894, though full of interest, was not, however, exhaustive. There was, in the first place, some apparent misunderstanding as to the intention of the Comptroller. In the next place the investigation was confined to retail transactions, and, furthermore, the returns were confined to national banks alone. Finally, some of the results were so curious as to point to the desirability of a more thorough and comprehensive investigation before proceeding to make any sweeping deductions from facts collated. These considerations have not been without their influence upon the Comptroller of the Currency, who has at present in mind another investigation to supplement that of two years ago. Mr. Eckels has been in consultation with Professor Kinley, who aided him in the former investigation, and it seems probable that, as the result of their conference, the distinction between the different classes of retail dealers made in the former investigation will be abandoned, and that the scope of the inquiry will be widened so as to include, in addition to retail dealers, wholesale dealers and other classes of depositors, and to cover state as well as national banks, at least to the extent to which that is practicable in an investigation conducted by a national agency. Another inquiry which may be included deals with the extent to which wages are paid by checks. The coming investigation, then, bids fair to be more comprehensive and thorough than that conducted two years ago, and the results will be correspondingly more satisfactory to the statistician.

BANKRUPTCY LEGISLATION IN CONGRESS.

As a result of the deliberations of the House Committee on the Judiciary, the Torrey bankruptcy bill, with some amendments, has been reported. The bill, as was pointed out last week, is on the list of measures which are to be given early consideration. The features of the bill have already been made sufficiently familiar to readers of this journal, but it will not be without interest to present the following summary of its provisions by Judge Jay I. Torrey, the author of the original measure, which appears in a Washington special to the St. Louis *Globe-Democrat:*

The bill provides that any corporations, irrespective of the amount owed, may become a voluntary bankrupt. Persons, firms and corporations (except farmers and wage earners) who owe $1,000 or more and have committed acts of bankruptcy, according to the evidence in a fair and impartial trial, before a jury if desired, may be adjudged bankrupts upon the petition of creditors.

Acts of bankruptcy by a person (including firms and corporations) shall consist of his having within four months prior to the filing of a petition against him run away or stayed away to avoid service of civil process, and to defraud his creditors; failed for thirty days, or conditionally within such time, while insolvent, to secure the release of property levied upon for $500 or over; made a transfer of his property to defraud his creditors; made an assignment or admitted his insolvency in writing and filed it in court; made while insolvent a preference; confessed a judgment to defraud his creditors; secreted his property to avoid legal process and to defraud his creditors; suffered while insolvent an execution for $500 or over to be returned no property found, or suspended and not resumed for thirty days while insolvent the payment of his commercial paper for $500 or over. Creditors need not proceed against a debtor who has committed acts of bankruptcy any more than they need sue every debtor who is in default in payment.

If the judgment in a bankruptcy suit is for the plaintiffs, the defendant will be adjudged a bankrupt. In that event he will retain the exemptions allowed by the laws of the state in which he lives, and, if an honest man, will be discharged. If the judgment is for the defendant, the petition will be dismissed at the cost of plaintiffs, as in other suits.

The property of the bankrupt will remain in his possession until after the trial, unless the creditors shall give bond and secure its attachment; in that event the debtor may retain possession of his property upon giving a forthcoming bond. The offices of referee and trustee are the only ones created by the act. The referee is an assistant judge, and will be appointed in such numbers and in such localities as will be best calculated to secure a prompt administration of the act and serve the convenience of all parties having bankruptcy business.

The trustee will receive the title of the bankrupt to his property and administer the estate. He will be elected by the creditors in each case. He may recover all property which has been hidden away or fraudulently conveyed. The clerk will receive a $10 filing fee in each case, and no further compensation. The referee will receive 1 per cent. of the net amount paid in dividends to creditors from estate administered before him, or one-half of 1 per cent. in estates in which there is a composition, and a filing fee in each case of $10. The trustee will receive 5 per cent. on the first $5,000 paid in dividends to creditors, 2 per cent. on the second like amount, and 1 per cent. on additional amounts, and in each case a filing fee of $5.

The compensation of the referees and trustees will not be paid until the estates have been administered and the records returned to court. Making the amount of the fees received and the time of payment depend upon the prompt and economical performance of their duties by the referee and trustee will result in the quick and economical administration of bankrupt estates.

Claims may be proven by the simple oath of the creditors, and will be allowed upon being filed in person or sent by mail, without the payment of any filing fee; if it is thought that an allowed claim is fraudulent, it may be suspended and investigated.

Preferences are forbidden, and those which have been given may be set aside if proceedings intervene within four months after they have been given. Valid liens will be upheld; fraudulent ones will be set aside. Present legitimate business methods will not be interfered with by the bill.

The Torrey bill in its substantial features has been before the country many years, but it remains still unenacted. It has already enjoyed the distinction of being favorably reported, but one circumstance or another has prevented it from becoming a law. A vote by the House in its favor would, of course, encourage its friends somewhat, but the Senate, whose Judiciary Committee has already reported another bill, remains to be reckoned with.

GENERAL ELECTRIC'S REPORT.

While the position and prospects of the electrical manufacturing business have been greatly changed by the recent arrangement between the two leading organizations operating in that field, there has been more or less curiosity in regard to the showing which the General Electric Company would make for the fiscal year ending January 31. The statement in question was made public, and, as regards its main features, corresponds very closely with the general anticipation. The conclusion to which it points is that activity in electrical construction during the past year created a very large demand for machinery and supplies of the character manufactured by the company, but that the competition in the business was of a character to cut down the resulting profits very seriously. The report, in fact, is a striking argument in favor of the policy which has now been adopted. The report, indeed, puts the case succinctly, by saying that the deal with the Westinghouse Company will eliminate much costly litigation, and will yield, through coöperation in manufacturing, many advantages to both concerns. Current accounts of conditions in the trade would, indeed, indicate that the practical effects of this are already seen—that both companies are adhering to list prices and sternly refusing excessive discounts on orders, while there has been an appreciable, if not extraordinary, increase in the prices obtained for the most commonly-used classes of supplies and machinery.

The report must be considered in the light of the conditions which existed before the arrangement referred to in the preceding paragraph was effected. It is a record of a large business conducted in the face of excessive competition, and that it resulted in any profit is a striking testimonial to the enormous development of electrical construction and installation throughout the country. The items of the company's income account for the fiscal year present the following comparisons with those of the years 1895 and 1894:

Year ending Jan. 31.	1896.	1895.	1894.
Gross earnings	$13,315,667	$13,263,611	....
Operating expenses	11,910,240	11,451,864	....
Net earnings	$1,405,426	$1,811,747	$3,189,884
Other income	421,040	....	510,038
Total	$1,826,466	$1,811,747	$3,699,922
Interest and taxes	437,500	464,583	695,350
Balance	$1,388,967	$1,347,164	$3,004,572
World's Fair loss	....	....	241,877
Balance	$1,388,967	$1,347,164	$2,762,595
Dividends	....	....	1,655,150
Balance	$1,388,967	$1,347,164	$1,107,595
Depreciation	511,321	932,521	....
Surplus	$877,645	$414,643	....

The amount written off under the head of depreciation is distributed among the franchises, factory plants and real estate, and is called a reduction of the deficit of former years. As the balance sheet which accompanies the report shows a deficit of $13,917,071 in the profit and loss account, or, in other words, an impairment of capital to that extent, the policy of making this change is apparent. Making no allowance for depreciation, the balance of $1,388,957 shown as the result of the company's operations would equal full 7 per cent. dividends upon the $4,252,000 of preferred stock, and about 3½ per cent. on the $30,460,000 of the company's common share capital.

The most satisfactory feature about the report is the statement that the company borrowed no money during the year, made all purchases for cash, and kept up an average cash balance of about $500,000, the amount on hand at the closing of the year being $879,000. At the same time a conservative policy has been pursued with reference to the valuations of stock and bonds. Large amounts of these are carried on the balance sheet at nominal valuations of $1 per lot, irrespective of their par values, though during the year securities valued at $1 per lot, were sold for $41,000. The total sales of securities for the year yielded $707,399, the amount thus disposed of being $1,359,000 in par value, carried on the books at $514,000. Full schedules of all securities owned by the company are printed in, and the management is, indeed, to be commended for the full and apparently frank way in which the affairs of the company are laid before the stockholders and the public. Wall street has been a little troubled lately in relation to the General Electric Company's affairs by suggestions that a readjustment of the capitalization to cover the impairment of capital account was in contemplation. It is impossible to either affirm or deny these reports, but it would seem that such action would be premature at the present juncture, when the concern is beginning to work under new conditions which seem likely to have a very important influence upon its revenues.

EXPORTS OF FRENCH FLOUR AND WHEAT.

Paris, April 8.—American millers must be astonished to find that for the last two years, in various flour importing countries, they have had to compete with flour from a new source—from France.

About two years ago exports of French flour were very small, but since then they have largely increased, and French flour is now sold under regular marks or brands in England, Holland, Norway and other countries. The quantities offered for sale are not large, but the prices asked are lower than those quoted for similar grades of American or flour of other origin.

It is difficult to understand this, for about two years ago, in consequence of the arrival of several consignments of American flour at French ports, French millers organized the "Syndicate of French Millers," which petitioned the government, claiming that the duty of 6@8 francs per 100 kilos was not sufficient to allow home millers to compete against American flour; that to save the French milling industry from disaster it was absolutely necessary to raise the duty to 12@15 francs per 100 kilos, according to the ratio of extraction. They argued that American millers were in better situation; that they had large mills where the cost of production was less in proportion than in the small mills in this country; that they worked in the very center of the wheat districts, and that they did not have to pay the heavy freight charges on the wheat, as the freight for flour by transatlantic cargo steamers was very small.

The bill for increasing the duty on flour was adopted by the French Parliament, and the arrivals of American flour at French ports has completely ceased. Since then the export of French has commenced, at first in small quantities, but now developed to very respectable figures.

One can only come to the conclusion that this new duty, which apparently could alone save the French milling industry from disaster, is the primary cause of the privileged position of the millers, and the following example will certainly confirm the opinion: The prices quoted in London for the best brands of French flour is 19s. 6d., c. i. f., per 280 pounds, and the same flour is quoted in Paris for bakers' consumption at 45@46 francs per 159 kilos gross, or 157 kilos net. The price of 45 francs per 157 kilos is equal to 28.65 francs per 100 kilos, to which must be added the freight to England, insurance, etc., 1.25 francs, making a total of 29.90 francs per 100 kilos.

On exporting to England or other foreign markets, millers are taking advantage of the *acquit-à-caution* system on wheat, which to-day represents only a duty of 4 francs per 100 kilos, and in buying these acquits, or in importing foreign wheat, the difference to the debit of the French miller is not less than 3 francs, therefore there remains to his credit 4 francs per 100 kilos of wheat, which, at 60 per cent. extraction, is equal to 167 kilos for 100 kilos of flour, therefore 1674 × =6.70 francs, which, deducted from 29.90 francs, quoted above, leaves 23.20 francs, equal to 23s. 5d. per 280 pounds, and the parity of the price of the same flour at Paris, 45 francs per 157 kilos, is also 23s. 5d. per 280 pounds in England, whereas the price quoted in England is only 19s. 6d., showing apparently a loss to the French miller of 4s. per 280 pounds. But as explained, the application of the *acquit-à-caution* system probably enables the miller to cover this difference. I will admit that the price of 45 francs per 157 kilos in Paris includes the miller's profit, but this cannot amount to the proportion of 4s. per 280 pounds in view of the keen competition between French millers.

Lately the question of the duty on imported wheat and the consequences to agriculture has been agitated on all sides. We have to solve this problem: Foreign wheat is quoted at from 14 to 16 francs per 100 kilos (220 pounds) c. i. f., and the duty is 7 francs per 100 kilos. The price for home-grown does not exceed 18 francs, and in certain producing districts, such as Brittany, only 15 to 16 francs per 100 kilos. It is argued that the effect of the system known as "*acquit-à-caution d'admission temporaire*" (temporary entry) is the principal cause of this state of affairs.

The government allows the export of flour to compensate the free entry of a given quantity of wheat according to the rate of extraction—60, 70, 80 or 90 per cent. of flour. That is, for 60 tons of flour exported, 100 tons of wheat can be imported free of duty if milled at the rate of 60 per cent. extraction, and 70 tons of flour for the same quantity of 100 tons of wheat if milled at the rate of 70 per cent., and so on for the other ratios, the flour to be exported from one of the ports within the zone in which is situated the port of entry of the wheat. Some authorities assert that the calculation as to flour and wheat is not right, and that there is a difference of 10 to 20 per cent. in favor of millers, because the flour exported does not represent the rate of extraction declared at customs. Millers contest these figures, but admit 3 to 4 per cent. under the name of "fissure," meaning a certain allowance as waste which cannot be taken into account.

With the exception of the Mediterranean ports, there are but 8 or 10 millers who export flour under the *acquit-à-caution* system, and these *acquits-à-caution*, at the present time, represent a value of only 3 to 4 francs per 100 kilos, against the duty of 7 francs they would have had to pay.

Besides the facts, the system has the inconvenience of causing 10 to 20 per cent. of the wheat imported (representing the "fissure") to enter without paying any duty, and the arrival of large quantities of foreign wheat at a special port without any practical requirement depresses the market for home-grown wheat. A miller buying 2,000 tons of foreign wheat will at the same time sell a corresponding quantity of flour to bakers, and on the Paris Term market, and on the arrival of his cargo the wheat will not all go to the mill, but will be resold, in part, in small quantities, and by the system of *acquit-à-caution* the importer will reduce the duty to 3 or 4 francs instead of 7 francs, thereby placing himself in a position to compete with sellers of home-grown wheat and prevent an increase in the value.

The worst of the matter is that the importation of a large quantity of foreign wheat without practical need occasions an overproduction of manufactured stuff, which is in part sent to the Paris market to cover sales, as explained, and this, with the remainder, forms a stock which is manipulated by certain speculators to influence and depress prices.

It is now proposed that the government should modify the present law so as to allow the exportation of home-grown wheat in compensation for foreign, and also abolish the zones. Nothing would be more justifiable, as the export of home-grown wheat, in the form of flour, is permitted under cover of the *acquit-à-caution* system, and in this way (wheat against wheat) no fraud would be possible under disguise of "fissure." This step would, I think, have a very great effect, not only on business in France, but also on the markets of the world, as it would at once make France both importing and exporting, and would tend to level prices between home-grown and foreign. K.

BANK CLEARINGS.

At a time when the present plan of grouping banks of New York and other cities into compact and workable form was first proposed, BRADSTREET'S took occasion to commend the project and give it cordial support. As was pointed out by this journal, the idea of so organizing the banks subordinate to the New York State Bankers' Association, if carried out to its logical conclusion throughout the country, would be one sure to result in much good, not only by strengthening the banks themselves and arousing and promoting a general community of interest and feeling, but would be of value also to the mercantile community, who are as vitally interested as the banks themselves in strengthening the ties that bind all those interested in the commercial progress of the country.

An important illustration of the benefits which, within a short time, have begun to flow from this union was given at the quarterly meeting of Group No. 9 of the New York State Bankers' Association, at the New York Clearing House, on Saturday last. This group includes the state and national banks in New York city. Besides the representatives of the New York city banks entitled to be present, there were the officers of all the Brooklyn banks and those of Westchester county and the towns along the Hudson river, comprised in Groups 7 and 8 of the State Association. While paying sufficient attention to the usual formal business, most of the time of the meeting was devoted to a consideration of clearing houses, their methods and their place and influence. In addition to interesting addresses by representatives of the Boston, Philadelphia, Baltimore and Chicago clearing houses, the president of Group No. 9, Hon. A. B. Hepburn, president of the Third National Bank, New York city, made a very clear and concise address upon the objects and powers of the clearing house association, which deserves a circulation wider than that embraced among the members of the groups actually represented at that meeting. Mr. Hepburn explained the basic principles of the clearing house as enabling every member to settle with other members as a unit, as though each member were conducting his business with one instead of with scores of banks. The economy of time and of clerical force and the dimunition of risk in transporting large sums of money to settle balances was emphasized. The spirit of evolution and progress which has taken possession of the clearing house idea of late years was, however, specially touched upon. This promotion of the uniformity of method in business and its action in times of financial peril have made it a more important factor in our system of finance than originally contemplated, and the benefits of issuing clearing house certificates were referred to.

Perhaps the most interesting and, to a certain extent, most pressing question confronting clearing house managers is, however, referred to by Mr. Hepburn as follows:

> The exchanges of the various clearing houses of the United States are published weekly, compiled by our financial journals, commented upon, and relied upon as reliable data indicating the course of trade and commerce. In order that this information may be reliable, it is important that these reports be uniform in their character, and based upon exact statistical information. A number of the smaller cities report not only the exchanges they take to the clearing house, but also the exchanges that are taken away—in other words, both the debits and credits—in other words, they double the exchanges each day.

Readers of BRADSTREET'S reports of bank clearings will notice something familiar in this suggestion. For years, in and out of season, BRADSTREET'S has called the attention of clearing house managers to the importance of a uniform system of reporting clearings. In a number of instances, where the system of counting both sides of the account have been used, BRADSTREET'S has labored, with some success, to induce a number of managers to adopt the plan pursued at the New York and other clearing houses of counting only totals of exchanges brought to the clearing house. Within the past week our efforts in this direction have borne fruit in the case of a prominent city in the Mississippi valley, which has abandoned its older and faulty plan for the (to it) newer and correct method pursued at leading clearing houses. It is unnecessary to mention names of cities which have seen the error of their ways and reformed, but readers of BRADSTREET'S will not be slow to remember names of some important centers which have been offenders in this direction. Yet, there still remain clearing houses which refuse to adopt methods pursued at the more important clearing cities. Not only, as Mr. Hepburn mentions, do such cities add both sides of the account, thus really doubling the volume of exchanges, but, in some instances, the balances used to settle differences are included in clearings, and in some cities in the west totals of clearings in addition to these items include "estimates" of the cash business done in the city by groceries, hotels and other places, and, in fact, an effort is made to dignify, by the name of "bank clearings," estimates of business done in lines practically apart from the banks. If these erroneous methods of compiling clearings were pursued with regularity the totals would have some appearance of approximate values, but, unfortunately, there is no proof that any uniformity exists, even in this line, and abnormally swelled totals of those cities, when compared with actual clearings from other cities, make a comparison altogether out of proportion to the amount of business in checks actually handled at the banks. Where this padding of clearings consists in merely adding both sides of the account together, the division of this padded total by two would ordinarily furnish a fair idea of the proper total; but, in cases cited, where totals other than bank clearings are included, no system of division, whether by two or more, is adequate to the situation.

It is true that some financial journals comment and rely upon bank clearings as data approximately indicating the course of trade and commerce. This is true, in a measure, of clearings totals published by most of the clearing houses of the United States. That all the clearings figures cannot be relied upon is unfortunate, and may be attributed to the mistake many bank managers have made in regarding a clearing house as an advertising medium, discarding altogether the basic principles which induced the founding of clearing houses and discarding almost entirely the ideas which have been evolved from the original clearing house plan.

Perhaps no better illustration of the value of the system could be furnished than in the well-remembered action of the New York and other clearing houses during the panic of 1893, in standing together practically as one bank, pooling their resources, and, where necessary, aiding weaker members for the purpose of maintaining the stability of the banks as a whole. It is known that a number of clearing houses, west and south, organized probably primarily as advertising bureaus, under the stress of panic, promptly "laid down," and stopped business, when the panic began or shortly after. Either these clearing houses were not needed, or, if they were, the managers were unequal to the task and to the occasion. Mr. Hepburn's address, in which he calls attention to the need of reform in compiling bank clearings, deserves wide circulation, and, coming from a practical bank manager, may have more weight with clearing house managers than would the suggestions of any or all financial journals which, as he says, comment and rely upon current bank clearings statistics as indicative of the course of trade and commerce.

BRITISH IMPERIAL FEDERATION.

The recent proposal looking to commercial union of the British empire, put forward by Mr. Chamberlain at a recent dinner of the Canada Club in London, has attracted widespread attention. A scheme for the federation of the empire has long been a dream of British statesmen, and the significance attaching to this revival lies in the fact that in the opinion of its present champion something like a satisfactory and workable arrangement might be reached were a council of the empire to be held.

In the opinion of the London *Times*, the present situation does not appear to be so wholly adverse to the suggested change as heretofore. It is pointed out by Mr. Chamberlain that the colonies have found it to their advantage to modify high protective tariffs, and that inducements might lead them further in this direction. It is recognized that the proposal involves the necessity of concessions on all sides, and that if the imperial government is prepared to discuss the question in such a spirit, one may be pardoned for presuming that the individual colonies might reciprocate.

It appears to be taken for granted that tariff for revenue must be the fundamental principle of the proposed agreement, and tariff for protection between different parts of the empire abolished. This naturally suggests whether the colonies could readjust their tariffs to this basis without confusing their systems of revenue, and whether imperial federation would be sufficient *quid pro quo* for the loss and possible risk natural in the first instance to so radical a change in commercial policy.

This appears to raise the entire question as to protection and its desirability as opposed to comparative free trade. As has been stated, the suggested changes would in no wise interfere revenue tariffs on certain articles, from which it is important to examine the proportions which customs duties bear to the whole revenue in the more important self-governing British colonies. It is explained that out of the total annual revenue of Australian colonies, amounting to £29,164,000, only £7,706,000 are raised by customs duties, nearly one-fourth of the total revenue, while more than 43 per cent. of the entire customs revenue is yielded by duties on intoxicants and narcotics. In the Dominion of Canada customs duties constitute more than one-half of the federal revenue, which amounts to £7,274,000 annually, while the customs and excise together amount to nearly three-fourths of the total of the revenue of the Dominion. In South Africa the customs amount to nearly one-quarter the revenues of the colonies, and from these figures it would appear that "considerations of revenue alone would not necessarily be opposed to a rearrangement of the tariffs of the empire on some such basis as that proposed by Mr. Chamberlain," for, with the exception of Canada, no British colony receives so large a share of its revenues from customs and excise as Great Britain itself. With excise left out of account, it is found that Great Britain with nominal free trade obtains one-fifth of its revenues from customs, and Australia and South Africa with tariffs only one-fourth, which, it is stated, indicates that customs revenue and high tariffs do not necessarily run together.

In discussing the speech, the *Times* appears to think the temper of the British colonies, even in those where high customs tariffs prevail, favor low tariffs, or an approach to free trade, more than at any preceding period, and this, it claims, is showing itself more and more with the increase of exports from the colonies in question.

This conclusion, which, so far as Canada is concerned, appears based on the growing strength of the Liberal party, now out of power, appears to be the basis of the pres-

ent prospect for success of imperial federation. In the opinion of the leading British newspaper, it "may be accepted as of good augury for the success of a free trade commercial union."

WHEAT PRICES IN THE UNITED STATES AND ENGLAND.

To the Editor of BRADSTREET'S:

SIR.—In your issue of March 28 you give the prices of wheat at various periods on the farm in Minnesota, at New York and in London, and remark that "they go to show the truth of the declaration made by Mr. Edward Atkinson a dozen or more years ago that American wheat would sell in the not far distant future as low as 34s. per quarter, with practically as much profit to the producer as it then brought with the Liverpool price above 50s. per quarter; in short, that the reduction of cost of wheat to the ultimate consumer was to come very largely out of the falling in cost of transportation."

Now, I know nothing about these Minnesota prices, and I maintain that to take the case of a single state, only slightly settled and scarcely at all provided with means of communication in 1862–66, the period at which the figures start, is not a fair way of testing Mr. Atkinson's general statement that the fall in the price of wheat has been met mainly by the reduction in the cost of transportation.

Let us take the average official farm prices per bushel in the United States at the periods named and compare them with the official average prices in England for the same periods, and then see how far they bear out Mr. Atkinson's theory:

	—Hundredweights.—		
Years	*Farm prices, U. S.*	*Official prices, England.*	*Differences, cents.*
1862–66	151.3	139	*12.3
1867–70	134.8	167	32.2
1871–74	114.7	171	56.3
1875–78	97.4	146	48.6
1879–82	103.3	134	30.7
1883–86	75.4	106	30.6
1887–90	77.2	94	16.8
1891–94	62.3	87	24.7
Percentage fall.			
1862–66 to 1891–94	58.8	37.4	..
1867–70 to 1891–94	53.8	48.0	..
1871–74 to 1891–94	45.7	49.1	..
1875–78 to 1891–94	36.0	40.4	..

* Excess in the United States, the other differences being those of excess in England.

It will be noticed that in 1862–66 the price was higher in the United States on the farm than in England in the markets, and it is significant that, in the table you give, the London price is not given for that period. Comparing the prices of the recent period, it is found that the difference between American and English prices is only 32.2c., and that this is only 7.5c. more than the difference in the last period. Again, the percentage fall in the price of wheat in the United States between 1862–66 and 1891–94 was very much greater than it was in England, and it was considerably greater also between 1867–70 and 1891–94, while it was only 3.4 less between 1871–74 and 1891–94, and only 4.4 between 1875–78 and 1891–94. These figures, I maintain, conclusively disprove Mr. Atkinson's assertion that the fall in the price of wheat has been nearly all met by the fall in the cost of transportation, and that American farmers are nearly as well off at present prices as they were when prices were over 50 per cent. higher.

I am, sir, yours faithfully,

WILLIAM E. BEAR.

London, England, April 7.

EDITORIAL NOTES.

Increases and decreases of available wheat stocks, each week, from January 4, 1896, as reported to BRADSTREET'S, with comparisons for three preceding years, were as follows:

INCREASES OR DECREASES OF AVAILABLE WHEAT EACH WEEK IN THE UNITED STATES AND CANADA.

Decisions were rendered by the Supreme Court of the United States in several cases involving the method of distributing the money appropriated by the act of March 3, 1891, for the payment of French spoliation claims recently. Two of these cases came from Massachusetts and one from Connecticut, and in all of them payment of the money was ordered to be made to the devisees and legatees of the original claimants. From those judgments those next of kin at the present time appealed to the Supreme Court of the United States. Chief Justice Fuller read an elaborate opinion, reviewing the diplomatic and legislative history of the claims, and discussing the proviso in the act appropriating money for their payment that the money shall go to the next of kin. The conclusion was that it was the intent of Congress that the money should go to the next of kin living at the time of the passage of the act, March 3, 1891, and that the distribution was to be made according to the statutes governing the distribution of estates in the several states. The next of kin were those nearest of blood at that date. The judgments of the state courts were reversed and the cases remanded for further proceedings not inconsistent with this opinion. The decision is important, affecting, according to Washington dispatches, the distribution of this fund among claimants in numerous states.

The divergency of views upon the currency question prevailing in different sections of the country is illustrated in the platforms adopted in such states as Massachusetts, Rhode Island and Alabama by the Democratic conventions held there this week. Nothing could be clearer or more forcible than the declaration of the Massachusetts convention, which, reciting that the true interests of the people require that the earnings of trade and the wages of labor be paid in money that is intrinsically worth, in all markets of the world, what it purports to be worth, demands the maintenance of the existing gold standard of value, and that the government shall keep all its obligations, at all times, redeemable and payable in gold, and opposes the free coinage of silver and any further purchases of silver bullion or the coinage thereof on government account. The Rhode Island convention declares that it is vital to the interests of the people that there should be no departure from the gold standard, to which all money, whether gold, silver or paper, should conform, and opposes the free coinage of silver until at least four of the great powers of the western world shall come to an international agreement establishing the ratio at which gold and silver shall be admitted to mintage. In Alabama, on the other hand, the free coinage men captured the convention, and a plank was adopted which calls for the free and unlimited coinage of silver at the ratio of sixteen to one, without regard to the concurrence of other nations.

The prominence achieved by electrical invention and development of late is to be exploited at New York next month, at the Electrical Exposition to be held at the Grand Central Palace. This, it is declared, will prove of almost sensational interest, as all of the recent electrical marvels will be exhibited. It is to be a complete exhibition—historically, scientifically, mechanically and commercially—covering the development of this particular field down to the present moment. Both Edison and Tesla are interested, and models of many of their inventions will be shown. Mr. Edison's exhibit will fill forty cases, and includes four complete sets of apparatus for the examination of human bones and other objects under the Röntgen X rays. These will be set up in the exposition so that visitors can look at the bones of their own hands. There will also be an exhibit of Röntgen photographs. Another feature of the show will be the transmission, over two Western Union wires, of the electric energy generated by the Niagara Falls. A model of the town of Niagara and of the turbines and dynamos operated by the water from the falls will be exhibited, and the wheels of the model will be moved by the electricity transmitted direct from the falls. As the Western Union wires can be used only in the evening, the electricity for the operation of the model during the daytime will be stored in the batteries of the Electric Storage Battery Company of Philadelphia. The New York correspondent of the Philadelphia *Ledger* adds that the Electric Storage Battery Company will exhibit an electric carriage and an electric launch. One of the most valuable sections of the show will be the historical exhibit. "This will include Mr. Hammer's collection of 1,000 early lamps; 361 models from the Patent Office at Washington, illustrative of the progress of electric inventions; the three first electric railway motors of Davenport, Page and Colton; Dr. Park Benjamin's collection of rare books, containing the first mention of the various important developments of electricity as a science, the books being valued at $20,000, and a collection of electrical relics, comprising, among other things, all of the medals and decorations received by Professor Morse. The Franklin Institute is expected to make an exhibit."

A plan for the establishment of an international court of arbitration has been presented to President Cleveland by a committee of the New York State Bar Association. The proposal includes the establishment of a permanent international court of arbitration to be composed of nine members, each representative to be a member of the Supreme or highest court of the nation he shall represent, and to be chosen by a majority of his associates because of his high character as a publicist and judge, and his recognized ability and irreproachable integrity, and each to hold office during life or the will of the court selecting him. The court thus constituted is to make its own rules and fix the place of meeting. Controverted questions are to be submitted by treaty between the disputing nations to the court, with an express stipulation that all parties shall conform to whatever determination the court shall make of the controversy. Independent powers not represented in the tribunal are to be allowed to submit controversies to its decision by complying with the rules of the court and contributing such stipulated amount to its expenses as may be provided for by the rules or determined by the court. The association presenting the plan suggests that the President enter at once into correspondence and negotiations through the proper diplomatic channels with representatives of the governments of Great Britain, France, Germany, Russia, the Netherlands, Mexico, Brazil and the Argentine Republic for a union with the government of the United States in this undertaking of forming an international court substantially on the basis thus outlined.

CURRENT BUSINESS NEWS.

Industrial.

The quarterly review of the American tinplate manufacturing industry, published by the *Metal Worker*, shows that seventy-three firms are now engaged or are ready to engage in the manufacture of tinplates in the United States. Thirty-four of these concerns are what is known as dipping plants, which merely coat black steel sheets purchased in the market and finish them into tinplates. The remaining thirty-nine concerns are tinplate works proper; that is to say, plants which roll and coat their own steel sheets. These thirty-nine works possess an aggregate of 172 hot mills, used for manufacturing the black steel plates, which when coated constitute tinplates. In the first quarter of the year seventeen such mills were added to the works, increasing their annual capacity by over 500,000 boxes, and bringing the present potential capacity of American tinplate mills up to about 5,200,000 boxes a year. Thus American tinplate manufacturers are now in a position to fill the whole of the consumptive demand for tinplates in the United States apart from that proportion used by the packers and by the oil trade, which, enjoying the advantage of a rebate of duty, is still held by the Welsh trade.

The production of gold in California was $15,334,318 and of silver, coining value, $599,790. Gold in Oregon is placed at $1,837,682 and silver at $15,192; in Washington, gold, $373,148; silver, $141,000; Alaska, gold, $2,328,400; silver, $97,000. The increase in gold in 1895 over 1894 in California was $1,471,000 and of silver $320,450. In Washington the increase of gold was $140,380 and of silver $128,480. In Alaska gold increase was $1,048,900 and silver $92,000. The gold output of Oregon in 1895 as compared with 1894 shows a decrease of $275,700 and an increase in the silver product of $4,500. The report states that the indications are that the gold product for 1896 will largely exceed that of 1895.

"The hot wave," says the *American Agriculturist*, "has given all vegetation a tremendous start. Insects are also hatching out by the billion a week to ten days earlier than usual. If now a cold wave follows, there is great danger to both foliage and fruit buds, but it may kill vast quantities of insects. Fruit growers, truckers, etc., should be on their guard against late frosts."

The Baldwin Locomotive Works of Philadelphia have closed another contract with the Russian government for sixty heavy freight engines, to be completed by July 1. This will make 134 locomotives built at the Baldwin works for the Russian government since 1895.

The strike among lumber loaders at Pensacola, Fla., has been settled and over 1,000 men have returned to work. The laborers gained an advance in wages.

An Ishpeming, Mich., dispatch says the Lake Angeline mine has laid off 250 men because of the condition of the ore market. The Lake Superior mine will discharge 200 men and the Cleveland 100.

It is said the Vale Mills Manufacturing Company will shut down its plant at Nashua, N. H., owing to dull business. Many hands will be thrown out of employment.

A dispatch from Parker City, Ind., says that 40 blowers of the Ohio Flint Works are on a strike, and over 125 hands are idle. "The factory is non-union."

A dispatch from Anderson, Ind., says that representatives from all the 14 shovel factories in the United States met secretly in Boston a few days ago and formed a combination. The factories are situated in Philadelphia, Pittsburgh, Beaver Falls, St. Louis, Terre Haute and Anderson. "The trust has already advanced the price 20 per cent. It is proposed to limit the output to 400,000 dozen a year, which is about the limit of the demand."

All the union plumbers employed by the beer pump houses in Chicago have gone on strike. Seven firms and two brewing companies are affected. The object of the strike is to compel the firms to employ none but union men, pay $3.75 per day in wages, and sign the agreement made by the Master Plumbers' Association and the Plumbers' Union.

The *Iron Age* says: "Another very promising branch of the iron and steel business is the manufacture of bicycle tubing. It is not long since all seamless tubing was imported, but within the past three years the industry has been transplanted to this country. At the beginning of the season, however, the demand for tubing was so heavy that foreign manufacturers were liberally drawn upon. Tubing works are being established so as to be ready for business by the opening of the next contracting season, while older works are increasing their facilities. At the same time the manufacture of brazed or welded tubing has been brought to such perfection that the preference for seamless tubing may be modified to a considerable extent."

A Denver, Col., dispatch says that the Philadelphia Smelting Company, controlling the industry in the United States and Mexico, has announced a reduction in the rates for smelting gold ores. The company says the reduction is due to improved methods. "This will allow a profit on ores running $20 a ton that could not be marketed before, and will materially increase the output for 1896."

A general strike for an eight-hour day by the union carpenters of the United States is said to be in contemplation for about May 1, in line with the resolutions of the last annual convention of the National Federation of Labor.

Members of the Nail Association and of the Wire Nail Association have been in conference at Chicago with a view of effecting a combination.

Commercial.

Navigation was opened at Sault Ste. Marie, Mich., last Saturday.

The shipping of live cattle to foreign markets via New Orleans bids fair to become extensive. On March 20 the two steamships loaded 244 head for Liverpool. "These ships, in ordinary weather, will make the run in about sixteen days. Their equipment for the business is practically perfect. The cattle, which are an exceptionally fine lot, came from Dallas, Tex. They were raised in the northeastern portion of the state. They were sent by way of the Texas & Pacific road in a special stock train."

A San Francisco dispatch says that the wars and rumors of wars in Nicaragua and San Salvador and other Central American ports have been the cause of considerable loss to the Pacific Mail Company. The harbors of San Juan del Sur and Corinto are closed by the rebels, and at the present time there are 1,500 tons of general merchandise and 17 loaded freight cars at Panama awaiting transportation to the interior. The steamship City of Para will make an attempt to make the ports.

Provisions prices have been ranging around as low a point during April as for twenty-five years. "Lard never sold lower since Chicago speculative markets existed," say Clapp & Co. Exports of provisions in March were 71,690,000 pounds, against 105,265,000 pounds last year.

A rumor of a big bicyle trust has agitated the Toledo dealers for several days. "Some strong influence is at work in that direction, although the big manufacturers are loath to say much about it. It is known, however, that a syndicate has been organized, which has $10,000,000 available cash, with the object of purchasing enough of the larger concerns, such as bicycle factories, rim factories, tube mills and rubber factories, to practically control the output of high-grade wheels in America. Several of the leading manufacturers of this city have been quietly approached, and it is rumored some of them have money in the trust."

Beerbohm (London) makes the world's stocks April 1 as 156,000,000 bushels, against 187,000,000 one year ago. The Chicago *Trade Bulletin* reports the world's stocks April 1 as 180,000,000 bushels, against 196,000,000 April 1, 1895. Clapp & Co. say: "We believe the difference between the two reports is more than made up in the invisible supplies of flour, and that the stocks of flour held in jobbers' hands now exceeds the decrease in the wheat visible."

Financial.

The governing committee of the Stock Exchange on Wednesday listed the following securities: Engraved certificates of deposit issued by J. P. Morgan & Co. for securities of the Northern Pacific Railroad Company, deposited under the plan of reorganization, as follows: For the collateral trust 6 per cent. gold notes of 1898, $5,000,000; for the common stock $16,000,000, and preferred stock $18,500,000; for the Northern Pacific & Montana Railroad first mortgage 6 per cent. bonds, $3,500,000, and for the general first mortgage 6 per cent. bonds of the Northern Pacific Railroad, the holders of which have accepted the option to exchange them for prior lien bonds of the new company, $11,500,000. Ohio Southern Railroad Company's additional issue of general mortgage 4 per cent. gold bonds, $287,000, making total amount listed $2,798,000. Allegheny Valley Railway Company's general mortgage 4 per cent. guaranteed gold bonds, $5,389,000. The total par value of the new securities listed is $5,676,000. The committee decided not to allow dealings in new Northern Pacific securities "deliverable when issued." An application requesting that transactions in those securities "deliverable when issued" was made, but in view of the difficulties that have attended dealings in Atchison securities "deliverable when issued," and the delay in issuing the new securities, the committee made the ruling mentioned.

The National Starch Manufacturing Company has declared a dividend of 2 per cent. on its preferred stock, payable May 1.

Hon. W. R. Morrison, of Illinois, is quoted as saying: "If I had my way about it, I would, as was said in the act repealing the Sherman law, continue the use of both gold and silver as standard money, which has so often been declared to be the Democratic policy. If you are going to ask me how this is to be done, I say, frankly, I do not see the way under the present circumstances without the coöperation of other countries, and this coöperation I see no immediate prospect of securing."

J. Edward Simmons, president of the Fourth National Bank, New York, is quoted as having said within a day or two that only one thing remains to be done before a business revival comparable with that which followed the resumption of specie payments in 1879 would take place. That is a declaration by the national conventions, soon to be held, against free and independent coinage of silver and in favor of the gold standard.

The United States Express Company has declared a dividend of 1½ per cent., payable May 15.

The following securities were sold this week at New York:

$5,565,000	St. Louis & San Francisco Railway Company consolidated mortgage 4 per cent. bonds, $25,000 at 30% and balance at	35%
100	Shares Second Avenue Railroad Co., $100 each	168%
905	Shares Keely Motor Company of New England (hypothecated)	$500
	Order for 100 shares Keely Motor Co. of New England, issued Jan. 26, 1893, (hypoth'd)	
62	Shares United States Fire Insurance Company, $25 each	111
$12,000	Madison Square Garden Company 2d mortgage 6 per cent bonds, due 1920	73¼
3	Shares Morris & Essex Railroad Company, $50 each	162¼
9	Shares Warren Railroad Company, $50 each	166
300	Shares Long Island Railroad Co., $50 each	80
150	Shares New York, New Haven & Hartford Railroad Company, $100 each	174
7	Shares Bank of America, $100 each	321
25	Shares National Bank of Commerce, $100 each	205⅛
15	Shares Yonkers Gaslight Company, $50 each	142
48	Shares Illinois Central Railroad Co., $100 each	96⅝
$500	Central Railroad of New Jersey 5 per cent. general mortgage gold bonds, registered, due July, 1987	116¼
$2,000	Central Railroad of New Jersey 5 per cent. general mtge gold bonds, due July, 1987	118⅜
$20,000	West Shore Railroad Company 1st mortgage 4 per cent. registered bonds, due 2361	105⅝
$6,000	New York, New Haven & Hartford Railroad Company 4 per cent. debenture bonds (exchangeable for stock April, 1903)	132⅜
$8,000	Pennsylvania Railroad Company 1st mortgage real estate purchase money 4 per cent. gold bonds, due May, 1923	107½
$20,000	Long Island Railroad Company 4 per cent. gene al mortgage gold bonds, due 1938	94
15	Shares Babylon National Bank, $100 each	116
100	Shares Retsof Mining Co., $100 each	$3.38 per share
$500	Retsof Mining Company 1st mortgage 5 per cent. gold scrip	45½
350	Shares Molecular Telephone Co., $100 each	$5 lot
10	Shares Brooklyn Academy of Music, with tickets (hypothecated), $50 each	160
25	Shares Fourth National Bank, $100 each	183
20	Shares National Park Bank, $100 each	270½
100	Shares Kings County Insurance Co., $20 each	168
5	Shares Nassau Fire Insurance Co., $50 each	138
6	Shares Western National Bank, $100 each	111¼
224	Shares Broadway Insurance Co., $25 each	117½@113½
30	Shares Gold and Stock Telegraph Company, $100 each	107¾
200	Shares Utica & Black River Railroad Company guaranteed 7 per cent. stock, $100 each	160
36	Shares Globe Fire Insurance Co., $50 each	80
$12,000	Pennsylvania Plate Glass Company of Irwin, Pa., 1st mortgage 6 per cent. bonds, due January, 1901 (hypothecated)	59½
25	Shares Commonwealth Insurance Company, $100 each	86¼
5	Shares National Broadway Bank, $25 each	234½
10	Shares Lawyers' Surety Company, $100 each	97½
$2,000	Hartford & West Hartford Horse Railroad Company 1st mortgage 5 per cent. bonds, due 1924 (hypothecated)	65
25	Shares United States Mortgage and Trust Company, $100 each	205
38	Shares Long Island Bank, $50 each	90
22	Shares Southern National Bank, $100 each	110¼

Railroads.

The Great Northern Railway Company reports for the six months ending December 31 last as follows:

	1895.	1894.	*Changes.*
Gross earnings	$11,639,227	$9,887,841	Inc. $1,751,386
Operating expenses	5,675,876	5,012,745	Inc. 663,131
Net earnings	$5,963,351	$4,875,096	Inc. $1,088,255
Fixed charges	3,253,742	3,112,133	Inc. 141,608
Balance	$2,709,609	$1,762,963	Inc. $946,646
Div. Great Northern pfd	625,000	625,000.	....
Surplus	$2,084,609	$1,137,963	Inc. $946,646

The operating expenses as given above include taxes and rentals. The statement does not, however, include income from other sources than operation.

The Wheeling & Lake Erie Company makes the following statement for six months ended December 31, being the first half of the fiscal year:

Gross earnings	$788,477	Inc. $68,150
Operating expenses	533,002	Dec. 18,503
Net earnings	$255,445	Inc. $86,622
Fixed charges	184,700	.....
Surplus	$70,744	Inc. $86,623

The $5,565,000 of St. Louis & San Francisco consolidated 4 per cent. bonds that were sold at public auction on Wednesday were bought by President Edward King of the Union Trust Company and chairman of the Atchison reorganization committee at 30 for $25,000, and 35 for the remainder.

The answer of Brayton Ives, president of the Northern Pacific Railroad Company, in the foreclosure suit brought by the Farmers' Loan and Trust Company, was filed in the United States Court in Milwaukee on Monday. The answer admits all the allegations of insolvency contained in the complaint. All parties in interest, including the company itself, having now acquiesced in the foreclosure proceedings, it is believed that a decree of sale will be secured with little delay.

The managers of the Joint Traffic Association have authorized the Grand Trunk Railway Company to put in rates between Canadian points and on Toronto freight to meet those made by the Canadian Pacific.

The all-rail east-bound shipments of dead freight from Chicago last week were 61,690 tons, against 65,903 tons the previous week and 61,004 tons the corresponding week of the previous year.

Pullman's Palace Car Company has declared a quarterly dividend of 2 per cent., payable May 15.

The receivers of the Philadelphia & Reading Railroad Company have presented a petition in the United States Circuit Court asking to consummate arrangements under which the road is to be furnished with a quantity of new equipment. The petition says: "We find it necessary, in order to maintain the efficiency of the rolling stock of the Philadelphia & Reading Railroad Company and to properly conduct the business, to purchase 1,000 additional coal cars, 25 refrigerator cars, 250 gondola cars and 250 box cars." Judge Acheson referred the matter to Special Master Crawford to take testimony and to report to the court.

Holders of the certificates of deposit of the Manhattan Trust Company for first mortgage bonds of the Seattle, Lake Shore & Eastern Railroad Company are notified that those certificates must be stamped as assenting to the plan of reorganization before May 1, as the mortgaged properties are to be sold in foreclosure proceedings on May 16, and the committee cannot protect at that sale the interest of any bondholder who has not assented to the plan of reorganization.

The "Costa Rica-Pacific Railroad Company" has been incorporated at Denver with a capital of $1,500,000.

Miscellaneous.

Immigration into the United States has set in with vigor, but the class of immigrants which has been recently arriving at the port of New York is not of the most desirable character.

Foreign.

A Berlin cable says: "The German Federal Council will not only refuse to increase the amount of the sugar export bounties, but will also oppose the prolongation of the present arrangement under which the bounty is paid."

The new Italian loan of 140,000,000 lire has been covered fifteen times. The largest subscriptions were made in Rome and Milan.

Early in January Beerbohm (London) "gave a forecast of the probable supplies of wheat and flour in the United Kingdom for the three months ended March 31. This forecast showed that 5,570,000 quarters of foreign wheat and flour might be expected to arrive, whereas the actual arrivals in these three months are officially returned as 5,553,000 quarters. The supply of English wheat, however, has rather exceeded expectations, having amounted to 1,100,000 quarters, whereas only 750,000 quarters were looked for."

The Canadian Parliament has passed a resolution granting a subsidy of $50,000 for a fortnightly steamship service between Canada and France.

In Dublin, April 17, the sale of the pneumatic (bicycle) tire patent business was arranged, a syndicate agreeing to pay $15,000,000 for it, "and the business is now offered to the public for $25,000,000 capital. Former shareholders, who paid altogether $1,300,000, have since received $3,290,625 in dividends and premiums, and they will now receive another $14,437,500. The profit in 1895 amounted to $1,540,000."

A new treaty of commerce and navigation, together with a consular convention, between Germany and Japan, has been signed at the Foreign Office in Berlin. Hopes are entertained that the successful issue of the negotiations will lead to a rapid development of commercial relations between the two countries.

The bimetallic conference, called with the view of paving the way to international negotiations on the subject, assembled at Brussels April 20. Delegates from Germany, the United States, Great Britain, France, Austria, Russia, Belgium, Denmark, Holland and Roumania were present.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Statute of Frauds—Contract.

The Kentucky Court of Appeals held, in the case of Taylor vs. Claysville, etc., Turnpike Road Company, that where a contract for the building of a certain turnpike road had been fully performed, the company for which the road was built could not resist the payment of the balance of the contract price on the ground that the contract being a verbal one, and not to be performed within a year, was within the statute of frauds.

Contract—Breach—Recovery.

The Supreme Court of Indiana held, in the recent case of Coffin et al. vs. State of Indiana, that for breach of a contract to sell certain interest-bearing bonds at a stipulated price, the purchaser is entitled to recover only the difference between the contract price and the market value of the bonds at the date of delivery, and that profits which might have been made from a contemplated resale of the bonds are too remote to be considered as damages naturally flowing from the failure to comply with the contract.

Wife—Debt—Conveyance—Fraud.

The Supreme Court of Georgia held, in the recent case of Simms vs. Tidwell et al., that where a wife loaned money to her husband for use in his business as a merchant, and he subsequently sold and conveyed to her all his merchandise in payment of the debt thus created, she in good faith accepting the conveyance in payment of and for the purpose of collecting the debt, there was no fraud in the transaction, it appearing that the goods sold to the wife were not worth more than the amount of the loan, and it not appearing that she by her conduct or otherwise had in any manner misled others or induced them to extend credit to the husband.

Vendor's Lien—Note—Mortgage.

The Supreme Court of Indiana held, in the recent case of Smith et al. vs. Mills et al., that one who holds a written contract for the conveyance of land upon which he could maintain an action for specific performance has a beneficial interest in the land, which he may sell, and for the unpaid selling price of which he may enforce a vendor's lien; that assuming the payment of mortgages upon real estate is a sufficient payment of the purchase money therefor, when such assumption is the consideration for which the owner agrees to convey it, and that the assignment, "without recourse," of a note secured by a vendor's lien upon real estate does not destroy such lien, but transfers the benefit of such lien to the assignee.

Copyright—Purchase—Reservation.

In the case of Doran vs. O'Neal et al., recently decided by the Tennessee Chancery Court of Appeals, it appeared that the defendant purchased from the complainant the right to use and vend a copyrighted book in certain territory, for which he paid part cash and executed his notes, due at different times, for the residue of the consideration. The contract contained this clause: "But in case of failure to make any of said payments and interest as specified, or any part thereof, when due, then this contract becomes null and void, and all payments forfeited without any further notice being necessary." The court held that this was a reservation in behalf of the vendor alone, and that the defendant could not by failing to pay the notes when due annul the contract and escape future performance.

Mortgage on Crops—Debt.

In the case of Donovan vs. Sell, recently decided by the Supreme Court of Minnesota, it appeared that in September, 1893, the plaintiff, as security for a debt payable in September, 1894, executed to defendant a mortgage on crops of grain to be raised on the defendant's farm during the season of 1894. By the terms of the mortgage the mortgagor was to remain in possession as long as its covenants and conditions were fulfilled, but it was also provided that if the mortgagor should make any attempt to dispose of the property, thereupon the mortgagee should have the right to take possession. Shortly afterward the plaintiff, as security for a debt payable in October, 1894, executed another chattel mortgage of like terms on the same property to another person. The court held that the execution of the second mortgage was not an attempt to dispose of the property within the meaning of the provisions of the first mortgage.

Debtors—Conspiracy—Equity.

The Supreme Court of Georgia held, in the recent case of Vaughn vs. Georgia Coöperative Loan Company, that where a debtor and other persons enter into a fraudulent scheme or conspiracy for the purpose of defeating the collection of a debt due by the former, and in pursuance of the conspiracy do a number of fraudulent and unconscionable acts the effect of which, if permitted to stand, would be to destroy the creditor's lien upon property subject to the payment of this debt, the latter may by equitable petition against all the conspirators, setting forth the facts and containing appropriate prayers, not only obtain a money judgment or decree against the debtor, but also have such other relief against his codefendants as the particular facts and circumstances of the case will justify. The court said that a petition of this kind is not multifarious, nor demurrable for misjoinder of parties or for misjoinder of causes of action.

Use of Descriptive Trade Name.

A question of much interest was decided by the English House of Lords recently in the case of Reddaway et al. vs. Banham. It appeared that the appellants had been making belting of camel hair for some time, and had stamped the words camel-hair belting upon their goods, together with a camel as a trade-mark. The respondent, a former employee of the appellants, made similar belting, and sold it with the words "camel-hair belting" stamped upon it. In the trial court the jury found that the phrase meant among the people that bought the goods belting made by the appellants, and no one else, and that the respondent had tried to pass off his goods as those made by the appellants. A judgment in favor of the respondents was reversed by the Court of Appeal on the ground that the belting made by the respondent might be fairly described as camel-hair belting, and that he was entitled to use these words. The House of Lords, however, reversed the decision of the Court of Appeal, on the ground that while, as a rule, no man can claim a monopoly in a merely descriptive title of his goods, yet if the facts show that by the use of this title a trade rival is selling goods as if they were the goods of another, a case is made out for the interference of the courts.

Note—Consideration—Debt.

The case of Trigg et al. vs. Saxton et al., recently decided by the Tennessee Court of Chancery Appeals, arose upon a bill to recover on an acceptance maturing in fifty-five days after it was drawn. The note was drawn by a lumber company on the respondents and accepted by them. The lumber company indorsed it to another firm which transferred it before maturity to the complainants, as collateral security for the payment of a note held by the latter against the former. Payment was refused on the ground that the respondents were not indebted to the lumber company at the date of the draft, and, therefore, there was no consideration for their acceptance, and because complainants were not innocent holders of the paper before its maturity in due course of trade, inasmuch as they took it as collateral to secure a preëxisting debt. The court held that there was a consideration for the acceptance at the time it was drawn and accepted, and that it was accepted by the respondents in order to enable the lumber company to use it in carrying out its contract with the respondents, and, further, that negotiable paper, taken as collateral security for an existing debt before maturity, is protected in the hands of the holder against all payments or equities arising subsequent to the transfer to him.

Central Pacific Railroad Taxes.

The Supreme Court of the United States held this week that the Central Pacific Company must pay taxes on the lands of its grant within the state of Nevada, which have been surveyed but not patented, the costs of the survey not having been paid. The court said that the taxation of such lands was specifically authorized by act of Congress of July 10, 1886, and added: "The company has had possession of these lands for thirty years; has offered them for sale, and sold them as its own, and, whenever it has been for its advantage to do so, has claimed possession of them and dealt with them as its private property. To assert all the rights of ownership and at the same time to repudiate all its obligations consists neither with the terms of the grant nor with the dictates of natural justice. The act of Congress, in providing that such lands should not be exempted from taxation, impliedly assents to their sale, but also guards the right of the government to them by providing that they shall be taken by the purchaser subject to the lien for costs for surveying, and all other liens or rights of the United States, and also by providing that at such sale the government may become a preferred purchaser, and in such case the land shall be restored to the public domain. If the company is liable for taxes upon lands which have been surveyed, but the cost of which survey has not been paid, a fortiori, it is liable if the cost has been paid."

BUSINESS NOTES.

England's Newspapers.

The London *Times* says: "There are 483 newspapers published in London and 1,357 in the rest of England; Wales is responsible for 100, Scotland for 226, Ireland for 169, and the British Isles for 20, a total of 2,355. Besides these, the magazines now in course of publication number 2,097, of which 507 are of a religious character. Over 200 of these magazines were produced for the first time during the past year. It is estimated that £4,000,000 a year is spent in advertisements, and that about 1,500,000,000 copies of newspapers are sold annually in London alone."

British India's Trade.

A British blue book has been issued giving a statement of the trade of British India for 1894–95, and shows that the total imports were valued at Rx.79,726,445, compared with Rx.92,382,213 for 1893–94. The total exports during 1894–95 were of the value of Rx.116,973,016, as compared with Rx.110,472,327 for 1893–94. (The values are all given as "tens of rupees.") The features of the import trade are a decline of about 5 per cent. in merchandise, and a very much greater decline in gold and silver. The export trade generally was increased by Rx.6,500,689, or about 5.6 per cent., the increase being largest in gold, which left India in quite abnormal quantities.

Effects of Cuba's Revolt in Spain.

The British consul at Barcelona says that the commercial depression in Spain has been intensified by the insurrection in Cuba. "The heavy protective duties which Spain levies on foreign goods have caused the home manufacturers to depend almost entirely on the colonial market. The local markets are also bad, because many families have been deprived of their bread-winners for the war, while others have spent their all in redeeming their relatives from the conscription or to provide substitutes where they had been ordered to Cuba. It is estimated that over £1,000,000 has been paid to the state on these grounds, and the people cannot, in consequence, afford to make purchases which they would otherwise make, so that such industries as those of linen and cotton have been seriously affected by this cause alone."

Artificial Butter in Holland.

The British consul at Amsterdam reports that the years of prosperity for the producers of margarine in Holland appear to have passed away for the present, "partly in consequence of the difficulties placed by most countries in the way of the sale of artificial butter or surrogates, and partly influenced by the very greatly increased importation of Australian butter into Great Britain." Prices of margarine averaged last year between about £1 18s. and £2 per cwt. The following are the quantities of pure butter, of margarine and of cheese exported from Holland to England in each of the last three years:

	Cwts		
Years.	*Butter.*	*Margarine.*	*Cheese.*
1893	142,811	1,229,737	269,364
1894	165,157	1,045,330	298,693
1895	191,221	878,827	305,920

Improving Australian Trade.

Statistics of the trade of Australasia last year show an increase in the imports of £2,000,000, of which sum Western Australia was responsible for no less than £1,660,537, leaving a comparatively small sum to represent the additional consumption of foreign commodities by the other six colonies. The exports rose, approximately, £1,333,000, toward which Western Australia contributed only £83,026. The imports of the seven colonies reached £50,653,760 and the exports £63,638,256, leaving a trade balance of £13,000,000 to meet the external liabilities of Australasia. West Australia imported £908,000 in gold coin and sent out £879,000 in raw gold—a proportion that is likely to be very materially altered now that many mines which required capital expenditure last year are producing gold, or likely soon to do so.

Bicycles as Baggage.

The *Railroad Gazette* says: "The New York legislature has passed [and Governor Morton has since signed] the bill compelling railway companies to carry bicycles as baggage. * * * Doubtless other states will follow the lead of New York, for things like these are contagious. The railways will do well to make the best of it and equip their baggage cars with some sort of overhead racks from which bicycles can be suspended and packed so as to occupy little room. If they do this, we do not see that the carriage of bicycles is likely to involve any additional cost of much consequence to the railways, except on a few roads where traffic is heavy. Undoubtedly, bicycling has affected local traffic to some extent, and will do so more in the future; but, on the other hand, it operates to cultivate the habit of travel in a wonderful degree. * * * We believe that the bicycle will be found to have done the railways much more good than harm."

Area and Population of Japan.

According to a Japanese journal, "in the year 1720 the population numbered 26,065,422; in 1815, 25,622,000; in 1880, 35,929,000; in 1885, 37,869,000, and in 1893–94, although the exact figures are not known, it may be inferred from the rate of increase during the preceding two decades that the population of Japan at the end of the year 1894 could not have been much less than 42,000,000. As Formosa has been newly added to the Japanese territory by the treaty of peace, and more than 3,000,000 of people in Formosa have, in consequence, become Japanese subjects, the present population of the country is probably more than 45,000,000. The area of the new territory being 2,532 square ri (square ri equals 5.9 square miles), the total area of the country, which was before the war 24,794 square ri, is now 27,326 square ri. Japan, in the extent of her territory compared with European countries, stands now next to Spain, being about equal to Sweden. She is larger than Great Britain and Ireland by 6,933 square ri, and is the eleventh largest country in the world. Her population is greater than that of France by 6,600,000, but less than that of Germany by 4,416,000. Compared with Great Britain and Ireland, she has 7,100,000 more people. In population, therefore, Japan ranks as the fifth power in the world."

Mushroom Cultivation in France.

Four of the United States consuls in France have made reports on mushroom cultivation in that country. "The industry is a very considerable one, employing capital in and around Paris alone of over a million and a quarter sterling, the production being valued at nearly half a million sterling, while sixty wholesale firms in Paris deal exclusively in mushrooms. The utmost care appears to be required in every one of the processes necessary for the artificial production, neglect in any one spoiling the whole crop. There must be a cool and even temperature, a certain moisture in the atmosphere, and darkness, or at least an absence of sunshine. A slight, steady air current, moving always in the same direction, and if possible from north to south, is also important. In the department of the Seine alone there are said to be over 3,000 caves in which mushrooms are grown, and in these live about 300 people, *champignonnistes*, who rarely see the daylight. The caves are usually exhausted stone quarries, the descent into them being by way of rope-ladders. A mushroom bed yields daily for about three months, and then the soil is exhausted and is of no more use, and a new bed has to be prepared. Hence, by timely preparations of fresh beds, mushrooms can be picked fresh throughout the year."

Revival of Bradford's Industry.

A correspondent of the London *Times* says: "The worsted industry of Bradford has been blessed by a great revival of prosperity, after a depression which began twenty years ago, when the fashion for lustrous fabrics went out, and culminated in the four years 1891–94, when the exportation of worsted coatings to the United States was almost crushed by the McKinley tariff. In the year ending with September, 1889, the United States imported more than $6,500,000 of these coatings. The figure fell to $1,275,626 in 1894, but rose to $7,575,052 in 1895—the Wilson tariff having reduced the duty from 100 to 50 per cent—and there is not house accommodation for all the workers who have returned to the mills from a period of domestic service. An increase in the American duty seems probable, but it is hoped that the West Riding industry will show itself more independent of the United States than it was. Fashion as well as tariffs has helped on the revival, lustrous materials being required for the present style of ladies' dresses, especially the sleeves. If the fashion returns to soft woolen goods, Bradford might so adapt itself as to challenge the French supremacy in such fabrics. At present we import foreign stuff goods, chiefly French, valued at nearly £6,500,000 a year." The correspondent also mentions that "the model manufacturing village of Saltaire, which the family of the late Sir Titus Salt had to sell two or three years ago, is now as prosperous as ever. One effect of the revived demand for Bradford goods is a rise in the price of best Lincolnshire wool from 9½d. to 16½d. per pound last year. This means a gain of £1,500,000 on lustrous wool to the English farmer, and other wools have risen in sympathy."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The feeling is more hopeful at many trade centers, owing to continued improvement of demand in retail lines, better weather, generally favorable crop prospects, and the activity which naturally follows renewed building operations, distribution of implements and farm supplies, and attendant activity. More favorable reports from commercial travelers are from those representing Pittsburgh, St. Louis, Kansas City, Omaha and Milwaukee houses. Moderate improvement is shown at a few other western centers, but at most of the larger distributing points throughout the country the movement of merchandise, on the whole, shows no material change.

While seeding is progressing rapidly in the northwest, country trade there is unfavorable. Lack of rain in Florida is the cause of scarcity of early vegetables, and at almost all cities mercantile collections continue slow, remaining relatively the most unfavorable feature of business even where the tendency in other directions is toward improvement.

In industrial lines the only marked change for the better is in the manufacture of shoes, orders for which have been placed in excess of preceding weeks. Wholesalers at the more important distributing centers in this line report larger sales, except at Chicago. Transactions in wool have increased moderately, but supplies continue heavy, and prices, while nominally unchanged, are weak. In Rhode Island fair orders for woolens have been placed with mills. The movement of dry goods continues unsatisfactory, but is improved in retail lines, due to the continued favorable weather. Prices for cotton goods are depressed by overproduction, not even the higher quotation for raw material having an influence under these circumstances. Demand for iron and steel of staple varieties remains almost at a standstill, consumers having stocked up prior to the recent advance. Railroad and structural material and bar and plate are in relatively best request, most other lines remaining flat. Cuts in quotations for Bessemer pig and steel billets are the result of transactions by middlemen. At the south a number of furnaces have contracted their output several months ahead and fractionally advanced the price of certain grades of pig.

The tendency of prices is the reverse of that for several preceding weeks, with a large number of decreases. In addition to those mentioned, wheat flour, wheat, Indian corn, oats, sugar, leather, petroleum and lard are lower, while wool, lumber, coal, pork and print cloths remain nominally unchanged. Cotton and tinplates have advanced, the latter due to a combination by makers.

Improvement in business in recent weeks is reflected in the total of bank clearings, $1,012,000,000, an increase of 2 8 per cent. compared with last week, and of 1.7 per cent. compared with the third week of April, 1895 When contrast is made with the corresponding week in 1894, this week's total is 18 per cent. larger, but it is 6 per cent. smaller than in the corresponding week of 1893, and 7 per cent. smaller than in the like week of 1892.

On the Pacific coast the situation presents few new features. Tacoma reports that the export lumber trade continues active, and Seattle that shipments to Alaska have fallen off. The dispute between the fishing and canning Columbia river interests continues to exercise an influence at Portland. At San Francisco a vessel is loading with wheat for Australia, and advices from the San Joaquin valley are that fruit has been damaged by frost, and to a less extent in the Santa Clara.

There are 240 business failures reported throughout the United States this week, compared with 244 last week, 223 in the corresponding week one year ago, 201 two years ago, and as contrasted with 186 in the like week of 1893.

Exports of wheat (flour included as wheat) from both coasts of the United States this week are the smallest since the third week in July, 1895, and, with that exception, the smallest in any week during the past six years, amounting to only 1,286,000 bushels, compared with 2,017,000 bushels last week, 2,431,000 bushels in the week one year ago, 2,727,000 bushels two years ago, and with 2,507,000 bushels in the corresponding week of 1893.

The stock market at New York is a little less active, but retains a bullish tone. The upward movement in prices reflects the better speculative position abroad and the improved standing of American securities there. Leading financial and speculative interests are believed to be assisting the market. Bonds are firm but somewhat less active. Foreign exchange is dull and steady at a slight advance. Demand sterling is 4.88½@4.88¾, but though rates have been below the gold export point, $200,000 more gold was shipped to Germany this week on "special orders."

Retail trade is fair at Montreal, Ottawa and Kingston, but general trade throughout the Province of Quebec is less active, owing to damage by floods and consequent bad roads. In instances commercial travelers have been recalled. Toronto jobbers report business fair, and at Halifax there is an improvement in the movement of merchandise, with better country roadways and opening of ports to navigation. The latter influence is also having a favorable effect on business in New Brunswick and Prince Edward Island. Bank clearings at Winnipeg, Toronto, Montreal, Hamilton and Halifax amount to $17,725,000 this week, compared with $19,156,000 last week, $17,934,000 in the week a year ago, and as contrasted with $15,885,000 in the corresponding week of 1894. There are 37 failures in business reported from the Dominion of Canada, against 34 last week, 32 one year ago, 20 two years ago, and 35 three years ago.

FINANCIAL.

The Money Market.

The feature of the New York loan market this week was the increase in the buying demand for commercial paper. Only a limited amount of choice names is coming on the market, however, and rates are quoted at 5@5½ per cent. for best names. The supply of time money is far in excess of current requirements, the offerings of sterling loans by foreign houses still having a marked effect. From 3½ to 4 per cent. is quoted for 30 to 90 days' loans, and 4@4½ per cent. for longer arrangements. Foreign houses are said to be showing less discrimination about collateral than local lenders. Call money has been plentiful at 2½@3 per cent. all week.

Foreign Exchange.

The feature in exchange continues to be the offering of loan bills, which, in the absence of any marked buying, causes depression in rates. Some security bills are understood to have been drawn, but their volume is not sufficient to make any impression. It would seem, however, that the plethora of money in London and the revival of a better feeling toward American stocks creates increased willingness to put out funds on time here. As a consequence of this, it is stated that foreign lenders are receiving a preference from borrowers owing to their less exacting requirements in relation to quality of collateral.

Posted rates were reduced on Tuesday last from 4.88½@4.89½ to 4.88@4.89; the offering of bills described above, with the extremely dull condition of the market generally, caused a decline in actual rates for sight sterling from 4.88¾ to 4.88¼@4.88½. In the latter part of the week the market hardened. Some comment was caused by the fact that the same banking house which recently shipped gold to Germany again withdrew $400,000 from the Treasury this week and sent $200,000 of it out, the balance being covered into a local institution. These transactions, in the face of the weakness of exchange, are still imperfectly understood by other bankers, though the fact that rates for continental bills are a little stronger than sterling may afford a clue. On Friday the market was firmer, demand sterling being quoted at 4 88½@4.88¾.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¾@4.89; commercial bills, 4.86½@4.86¾; francs, 5.16⅞@5.15; reichsmarks, 95 3/16@95 9/16.

The Bank of England rate remains at 2 per cent. The bank this week gained £424,000 in specie, its reserve rising to 60.06 per cent. of the liabilities, against 59.88 per cent. last year. In the London open market discount is quoted at 5/8@9/16 per cent. and call money at ¼@½ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending April 17, 1896:

	1896.	1895.
Dry goods	$2,[illegible]924	$2,563,272
General merchandise	7,[illegible]907	8,117,785
Total's for the week	$9,913,831	$10,681,057
Previously reported	151,106,288	154,784,542
Since January 1	$161,020,119	$165,465,599

The exports (exclusive of specie) from New York to foreign ports for the week ending April 21 were $488,966 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,627,520	$6,608,646
Previously reported	113,235,718	104,776,768
Since January 1	$120,863,238	$111,385,414

* Last week's total. † Not included in totals because containing other items than clearings. § Not included in totals because of no comparison for last year.

The New York Banks.

The bank statement issued last Saturday presents no features of any decided interest. The changes were all moderate, and the most important one was another increase of about $600,000 in loans. The loss of cash holdings through the Treasury movement and gold shipments seems to have been offset

by receipts from the interior, the total reserve increasing $434,000, while the deposits increased $900,000. As a result of the other changes the surplus reserve increased $208,000. The figures of the statement compare as follows with those of the preceding week:

	Apr. 11, '96.	*Apr.* 18, '96.	*Changes.*	
Loans	$465,612,400	$466,219,800	Inc.	$607,400
Specie	58,835,000	[illegible]	Dec.	205,600
Legal tenders	79,854,100	80,524,200	Inc.	670,100
Deposits	483,151,400	484,057,000	Inc.	905,600
Circulation	14,341,300	14,351,900	Inc.	10,600
Total reserve	138,719,100	139,153,600	Inc.	434,500
Reserve required	120,787,850	121,014,250	Inc.	226,400
Surplus reserve	17,931,250	18,139,350	Inc.	208,100

At the corresponding period last year the surplus reserve was $19,664,975, against $82,008,025 in 1894.

The Boston Banks.

	Apr. 18, '96.	*Apr.* 11, '96.	*Changes.*

Silver.

The silver market is lifeless, and fluctuations were this week confined to the New York market, where prices underwent a few fractional changes of no importance.

THE STOCK MARKETS.

The New York Stock Market.

Bullish sentiments continue to animate current speculation, the present week having witnessed increased activity and broader conditions, as well as a further improvement in price, though at the close of the week there were signs of weariness. The movement seems to be based upon a desire to discount the anticipated revival of trade, but its character is also due in a large degree to the example afforded by the recent speculative revival in London and the better standing which American securities are gaining there. The latter tendency, indeed, does not show itself in the form of any special foreign buying of securities. All that can be said is that the balance of arbitrage transactions between here and Europe is in our favor, while there is some foreign buying of bonds in small lots. On Wednesday, indeed, the foreign influences were unfavorable, owing to the chilling of interest in the American department on the publication by the London *Times* of a dispatch from its New York correspondent intimating that the Venezuela negotiations between Washington and the Court of St. James were not in a satisfactory state. Wall street, however, did not take this view of the matter in question, and the temporary foreign selling which ensued was met and counteracted by effective support in various portions of the share list. One of the features of the week has indeed been the more or less open assistance given to the bull campaign by the larger financial and speculative interests. The disposition of the professional element to realize profits naturally caused recession from time to time, but not only was support extended from the sources in question, but the tangible increase of public interest and purchasing has been sufficient to absorb such offerings and maintain the decidedly strong tone of the market. This broadening of the speculation, with the symptoms of increasing foreign interest, creates a belief that the upward swing of the market is likely to continue for some time. The disturbing influence on Friday was the expected adoption by the New York legislature of a bill pointing to more active interference by the state authorities with trusts and combinations.

Besides the active interference of leading interests on behalf of the improvement, it may be noted that a number of speculative pools have apparently been formed to operate in various stocks, manipulation of this kind being in some instances responsible for the advances scored. Among the circumstances which the street regards with satisfaction is the renewed quiet which reigns in regard to our country's foreign relations, and which was exemplified by the general incredulity with which the London *Times*' dispatch about the Venezuela question was received. The prevalent opinion that Congress will soon adjourn is also used as a bull argument, and, in a minor degree, a like view is taken of the approaching dissolution of the New York legislature. The weakness of foreign exchange and the ease of money are both regarded as bullish factors, the depression in the former market caused by the continued lending of foreign money here offsetting the influence of another small shipment of $200,000 gold to Europe, representing one of the familiar "special order" transactions.

There have been few developments of particular significance in connection with railroad affairs, and the political outlook in regard to the presidential campaign and the attitude of the great parties toward the silver agitation has not yet become a tangible factor in speculation. The uncertain character of the crop news is also disregarded, and the current railroad earnings continue to show sufficient improvement to give encouragement to the stock market bulls.

The actual trading during the week has embraced an unusually large number of stocks, and the improving tendencies have extended into all portions of the list. Among the grangers St. Paul, which advanced from 76½ to 78⅝, and Burlington, which rose from 78⅞ to 82½, attracted attention, while New York Central's sudden improvement from 96¾ to 98¾, accompanied by buying of the other Vanderbilts, was not without effect. Reading had effective support and went up from 11⅞ to 13⅜, and the Northern Pacific securities were strong on further favorable indications regarding the reorganization. It seems that the only large interests which had stood out in opposition to the plan deposited their securities before the expiration of the allotted time therefor on Thursday, and that all obstacles to the successful foreclosure of the mortgage have been removed. The southwestern stocks were in renewed favor, Missouri Pacific advancing from 25⅞ to 29⅝ and Wabash preferred from 18⅝ to 19½, which, with the strength of Western Union, led to the belief that the Gould interest was supporting its stocks. A decline in Manhattan appeared, however, to qualify this view of the matter in question. Union Pacific also declined on news from Washington indicating that no Pacific railroad funding legislation need be expected at this session.

The movement in the industrial stocks was irregular. Sugar led the whole list, at times advancing from 123⅛ to 126⅝, and then breaking to 124¼, after which it had a partial recovery, but on Friday it broke to 121¾ on the anti-trust legislation at Albany referred to above. Distillers was taken in hand by a pool and advanced from 18¼ to 20¾. Tobacco was also a feature, advancing to 75 and breaking to nearly 69 on Thursday, when all support seemed to be suddenly withdrawn. American Cotton Oil recovered sharply from the decline of the previous week on the discovery that the selling had been short stock.

Boston Stock Market.

The market has shown a more quiet tone in listed stocks, but sales of unlisted have been liberal, particularly of Sugar. Sales of the latter were large, and values hold up steadily. Atchison has ruled quiet but steady, with Chicago, Burlington & Quincy quite active and 2⅞ points higher at the close. West End Railroad also advanced 3 points. Coppers are more quiet and rather easier, with Bell Telephone 1½ points and General Electric 1 point higher. United States Leather has been dull, but the market closes with preferred advanced in price.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending— *Price* *Apr.* 23, 1896.	*Price* *Apr.* 16, 1896.	*Sales* *Apr.* 23, 1896.	*Sales* *Apr.* 16, 1896.

General Mention.

Messrs. Speyer & Co., in consequence of the appointment of receivers of the Baltimore & Ohio Railroad Company, and with a view to the protection of the interests of the holders of the 5 per cent. bonds of 1925 (loan of 1885), invite such bondholders to deposit their bonds, with all coupons attached, with them, on or before June 1 next, subject to an agreement between Speyer & Co., of New York, Speyer Bros., of London, and the depositing bondholders, copies of which may be obtained on application at their office. They give notice that on terms of the agreement, the coupons and interest installments maturing August 1 on deposited coupon and registered bonds, in case the Baltimore & Ohio Railroad Company should make default in paying the same on maturity, will be bought by them. Trust receipts will be given for bonds deposited, exchangeable for engraved bearer certificates, for the listing of which application will be made to the New York and London stock exchanges. No charges against depositing bondholders will be made by the bankers for their services.

At the request of the New York, Boston and Amsterdam committees formed for the protection of the holders of St. Louis & San Francisco Railway Co. 4 per cent. consolidated bonds, a reorganization committee, of which Louis Fitzgerald, president of the Mercantile Trust Company of New York, is chairman, has been formed pursuant to a plan and agreement, dated 21st inst., copies of which may be obtained from any member of the committee announced in another column of this issue. Holders of bonds are requested thereby to deposit their holdings with the Mercantile Trust Company of New York, or the American Loan & Trust Company of Boston, who act as their agent for this purpose. Holders of the above named bonds paying an assessment of 10 per cent. will receive for each consolidated bond of $1,000, $140 in first preferred stock for the assessment, $1,000 in second preferred stock, and $1,800 in common stock, and will have the right to subscribe to securities as set forth in the plan. It is stated that the interests that have already assented to the plan comprise more than 75 per cent. of the bonds. The plan, therefore, will almost immediately become operative. Deposits must be made on or before June 1, after which date bonds, if taken at all, will only be received upon terms to be announced hereafter. The fixed charges before the reorganization amounted to $2,531,074, whereas, under the plan, they will be reduced to $1,194,330. The voting trustees are John A. Stewart, Louis Fitzgerald, J. Kennedy Tod, Isaac H. Seligman, Benjamin P. Cheney, Samuel C. Eastman and James A. Blair.

The Northern Pacific Railroad reorganization committee announces that holders of over 92½ per cent. in amount of general second mortgage bonds, general third mortgage bonds, dividend certificates, consolidated mortgage bonds, collateral trust notes, preferred stock, common stock, and Northwest Equipment stock, and Northern Pacific & Montana Railroad Company first mortgage bonds, have been deposited under the plan and agreement of reorganization dated March 16, 1896, and that said plan and agreement are declared operative. Holders of outstanding securities may still deposit under the terms and agreement, but only on payment of the following penalties: "On bonds, dividend certificates, notes and equipment stock, 2 per cent.; on Northern Pacific preferred stock, ½ per cent., on Northern Pacific common stock, ¼ per cent." The committee reserve the right to terminate this privilege of depositing at any time and without notice. Holders of certificates heretofore issued by the Mercantile Trust Company for bonds deposited under the bondholders' agreement of February 19, 1894, not already stamped as approving the plan of March 16, 1896, are notified to present their certificates on or before May 7, in order that their approval may be stamped. The managers further give notice that they will exclude absolutely from the plan and agreement any and all bonds represented by any such unstamped certificate, unless, on or before said date, such certificate shall be so presented and stamped.

TRADE MOVEMENT.

BETTER FOR SEASONABLE ARTICLES IN RETAIL LINES, BUT JOBBERS, EXCEPT AT A FEW CENTRAL WESTERN CITIES, REPORT NO MATERIAL IMPROVEMENT.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, April 24.—The general movement continues quiet in nearly all departments of the merchandise market, although with more seasonable weather the feeling is more hopeful. The money market closes quiet, with available funds plenty, and indications point towards a further softening of rates. Call money is offered at 4 per cent., with the rate as low as 3¾ per cent., while the range on time money is 4½@5 per cent. as to date and collateral. One feature is the scarcity of acceptable names on commercial paper. The boot and shoe market shows a steady tone, with the factories quite busy as a rule. Western buyers who placed sample orders earlier are now showing more disposition to buy lots. Leather is selling moderately, with prices about steady. Good sales of packer hides in the west keeps values steady, but the eastern demand is very slack. Iron and steel are quoted steady, but trade is quiet. Lumber is moving moderately at steady prices, but the market lacks snap.

Providence, April 24.—General business remains quiet, especially in the manufacture of jewelry, woolens and cottons. Wholesale trade in all lines is steady, with a tendency to improvement.

Buffalo, April 24.—There is no improvement in the business situation. Collections are still reported slow and unsatisfactory.

Pittsburgh, April 24.—General trade conditions continue to improve, and the volume of business shows an increase over that of the previous week. Country buyers are more numerous, and orders sent in by traveling men are satisfactory. Some complaint is heard as to collections, which is the worst feature in local trade. The iron market during the past week has been a little more active. The outlook appears promising.

Philadelphia, April 24.—There is nothing doing in wool, and dry goods are quiet. There is a light demand for leather, with increased sales of boots and shoes from out-of-town buyers, but collections are dull and unsatisfactory. Petroleum prices have advanced slightly and a better feeling prevails. There is somewhat of an improvement in lumber, but prices are uncertain and much shading is done to secure orders.

Baltimore, April 24.—The week just ending has been a fair one. Nearby merchants have been in town, but sales are not large, particularly of dry goods, owing to the condition of the market. There seems to be a disposition to buy conservatively. Collections are fair.

West and Northwest.

Cleveland, April 24.—Last week's trade conditions are without noteworthy change. In leading lines the volume of business is fairly satisfactory, but continues moderate and unsatisfactory in those less staple. Collections have not improved.

Detroit, April 24.—A better feeling prevails in jobbing lines generally, the volume of business being satisfactory. Collections are, however, reported still slow.

Chicago, April 24.—There has been no general increase in the sales of the jobbing houses during the week, but they have kept up to about the same as the previous week. The orders for shoes, how-

ever, have decreased. There has been large sales of calfskins made by tanners at reduced prices, and it is claimed that they do not get their money back on them. Tanners generally hold good stocks and for the present are disposed to sell freely. Orders for pig iron, steel and bar iron have decreased, as buyers bought in anticipation of their wants two to three weeks ago, expecting a big advance; as it has not come, they are disposed to go slow. Sales of light hardware hold their own. Building materials are fairly active and prices steady. Butter has declined to within 1c. of the lowest point on record. Vegetables are more plentiful and lower. Wool receipts 44,995 pounds.

Louisville, April 24.—A seasonable jobbing trade is maintained in most all lines of merchandise. Retail dry goods and men's furnishing goods are very satisfactory. Collections are about up to the average.

St. Louis, April 24.—Warm weather has had a wholesome effect on general trade, especially among retailers of summer goods. Travelers are on the road with fall samples, reporting crop prospects favorable and taking orders for increased amounts. Boot and shoe factories are, for the most part, running full time and purchasing leather in large quantities. Building operations have commenced and are increasing sales of lumber and hardware. Nails are in particularly strong demand, partly on account of the advance to take place May 1. Receipts of new wool are light, but are steadily increasing, and values are stronger. Pig iron in fair demand. Agents say several southern furnaces have orders covering their output for several months, in consequence of which several furnaces have advanced the price on a few grades. Iron and steel are unchanged, and trade is quiet. Tin and terne plates have been advanced by agreement of makers. Collections are fair.

Kansas City, April 24.—Dry goods, boot, shoe and hardware houses, both wholesale and retail, have had large orders this week. Collections are satisfactory. Prospects for a large wheat crop were never better. Live stock receipts are liberal, with very low prices. Good rains prevail throughout this vicinity.

Milwaukee, April 24.—Trade is reported fairly satisfactory, and with the opening season a steady improvement is looked for. Collections are slightly better.

St. Paul, April 24.—No improvement in the condition of trade reported a week ago. Spring stocks are, for the most part, laid in, and late buyers have been influenced by country trade, which, owing to unfavorable weather, has not been good. Collections are only fair, and the same reasons are accepted as largely the cause.

Omaha, April 24.—Trade continues to show a steady improvement, and there is a brisk demand for staples in the leading lines. Collections are easier.

Sioux Falls, April 24.—There is a fair jobbing trade, with very fair collections. Retail trade is quiet. Seeding is progressing rapidly with favorable weather.

Southern Cities.

Charleston, April 24.—Trade in all lines is quiet, especially in groceries. Collections are only nominal.

Savannah, April 24.—Trade is reported fair. Collections are slow. Rosin and turpentine are steadily coming in, shipments of each being about the same. Both markets are firm, with a good demand.

Atlanta, April 24.—Trade is quiet; collections fair.

Augusta, April 24.—Some improvement is noted in retail and wholesale dry goods lines, but other trades continue quiet.

Jacksonville, April 24.—There is a drop in retail sales, but a fair wholesale business. Collections are slow. Hotels are closed; tourists gone. The lack of rain has caused scarcity of early vegetables.

Birmingham, April 24.—Trade is quiet; collections slow.

Chattanooga, April 24.—Collections are a little better than usual. Wholesale houses who have pressed their business have sold considerably more than a year ago.

Memphis, April 24.—General trade for the week is fair, especially in groceries and hardware. Collections are fair.

Nashville, April 24.—Business continues quiet except in implement and farming supplies. Collections hold an average for the season. Retail business in clothing, shoes and dry goods has improved. Money a little close, but there is no lack of ample supply.

New Orleans, April 24.—State election on Tuesday seriously interrupted business in all lines. There is a fair export movement in cotton, and stock shows a steady decrease. Holders of sugar are realizing slowly at the advance. Rice is dull.

Galveston, April 24.—Trade conditions in all lines show a slight improvement. Collections are improving, though below expectations.

Pacific Coast.

San Francisco, April 24.—Commercial lines are unchanged. Wheat freights are firm, with an upward tendency; one vessel is loading wheat for Australia, and another lumber for Calcutta. Fruit crops in San Joaquin valley are considerably damaged by frosts; also, to a less extent, in Santa Clara valley. Prospects for grain are good.

Portland, April 24.—The dispute between fishermen and cannerymen on the Columbia river continues, and as yet there has been very little fishing. Wholesale and retail trade continues quiet, with prospects of no change until the weather becomes more favorable. Collections are only fair.

Seattle, April 24.—Trade is quieter in principal lines this week owing to the falling off in Alaska demands and unseasonable weather. Snow in California has largely reduced supplies for commission houses, and cold east retards the lumber business.

Tacoma, April 24.—Wheat is about all shipped. Cargo lumber shipments are still active and exceed those of last year to date. Wholesalers in groceries report improved condition.

Canada.

Toronto, April 24.—General wholesale trade is fair. There is good sorting-up business in dry goods, and the demand for groceries has improved. Wheat and flour are dull, with buyers and sellers apart.

Montreal, April 24.—Retail trade in Montreal, Ottawa, Kingston and other centers shows healthy activity. Disastrous floods have occurred in the Province of Quebec. Travelers have been recalled owing to bad roads and floods. Trade is restricted and collections are not satisfactory. The results will be more apparent a little later. Individual mercantile losses are not heavy, but aggregate losses to farmers and others are heavy. In jobbing and manufacturing circles the outlook is disturbed by the general elections ordered for June. There is no change of importance in prices or in the volume of business likely until navigation opens.

Halifax, April 24.—There is evidence of some improvement in general business this week, principally due to the improved condition of country roads and the opening up of our ports. The movement in sugars and breadstuffs is light, and prices continue without change. St. John, N. B., merchants report business fair, with little change in the markets as regards prices. The reopening of river navigation has materially increased the supply of produce. Shipments of lumber are increasing. Markets are improving, and the outlook is favorable. Prince Edward Island reports that on account of the extremely low price of produce the prospects there are not encouraging. More attention than usual is being given this year to the lobster packing industry, and good returns are looked for.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500

Dry Goods.

The market at first hands continues quiet, and conditions are unsatisfactory to manufacturers. With good spring weather the consumption of seasonable fabrics shows a liberal increase, and the retail part of the market is doing better, which is bound to reflect later on other departments of the trade. Cotton goods are yet depressed through overproduction, but the market for raw material has hardened, which shows the trend of the market were the surplus goods out of the way. With an overstock of goods on hand, however, the higher cost of raw cotton cuts but a small figure in the market. Printed fabrics are quiet, although some popular specialties are yet going well. Ginghams are quiet. Dress woolens are quiet at first hands, although fair orders have been placed with the mills. The jobbing movement is quiet. Men's-wear woolens are quiet and the market is depressed, with much machinery idle.

Wool.

The general demand continues slow, but the sales show increase through the purchase of 1,500,000 pounds Oregon wool by a leading Rhode Island manufacturer. The price is said to have been on the basis of 30c. scoured. Supplies of wool are yet excessive for the season, and values favor the buyer, particularly for territory grades, which would be hard to place above 30c. for fine medium and fine, with strictly fine of good staple about 31@32c. Fleece wools are quiet and prices rather favor the buyer, although holders are not disposed to press sales to any extent. Australian wools are firm, with fair trading. The steamer Rhoetia for Hamburg, via Baltimore, took out 382,035 pounds Australian wool, while about 290,000 pounds more were sold for the same destination in Boston this week. Carpet wools are quiet, with Cape mohairs quoted ¾@1d. lower at the London sale.

OIL-PRODUCING PLANTS.

The St. Louis *Globe-Democrat* says: "The railway trains of India are lighted with castor oil. This kind of oil is obtained from the seed of the castor bean, which belongs to a family that comprises more than twenty species of oil-producing plants. The bean is a native of India, though cultivated in many parts of the world. In Persia its oil is widely used for lighting. There the seed is crushed together with raw cotton until the oil is

squeezed out of it. The cotton, thus soaked, is rolled up into papers, which furnish the common household illuminant.

"The best kinds of castor oil come from Italy and India. The seeds are freed of their shells by pounding them with wooden hammers, this work being done by women. The shelled seeds yield from 50 to 60 per cent. of oil. The oil is extensively used in medicine; also in pomades, in soap making, for lubricating machinery, and in China as a condiment. As a lamp oil it is far superior to petroleum, giving a white light and vying in brilliancy with electricity. It burns slowly, without danger, and gives off scarcely any soot. From the 'cake,' left after the pressing, an excellent gas is made which is being introduced into the railway stations of India. In 1895 India exported 2,679,236 gallons of castor oil. In cold climates the castor bean is an annual plant, dying down on the approach of winter; in Florida and other warm countries it is perennial, attaining a height of 30 feet and a girth as great as that of a man's body.

"There are over 200 species of plants whose seeds are used in making oils for illumination, medicine, food, soap and lubricating machinery. Most of them are natives of tropical regions. The oily matter in seeds is stored up as food to be utilized by the young plant during the early stages of germination. Oil is obtained from seeds by first crushing and then pressing them in cloth bags, or else by boiling them in water and skimming off the oil, which rises to the surface. The residue of the seeds, after the oil is extracted, is called 'oil cake,' and is often of great value as a stock food or fertilizer. The production of seed oils in this country is enormous, and the industries which it represents are of such importance that it is made the subject of a special discussion, from the pen of Mr. Gilbert H. Hicks, which will be printed in the forthcoming Year Book of the Department of Agriculture.

"One of the most important oil-producing seeds is that of the cotton plant. The seeds contain from 15 to 20 per cent. of oil, which for hundreds of years was wasted. In 1826 a Virginian was led to experiment with cottonseed. He made a small machine with which he was able to express a dark red oil that gave a fair light when burned in an ordinary lamp. In the same year a mill was built at Columbia, S. C., which produced a good quality of oil from cottonseed. From this small beginning has arisen a great industry, and although cotton is still grown mainly for the fiber, the seeds are now carefully saved for the oil. The crude oil is a thick fluid, of a dirty brown color; by refining it becomes straw color. The exportation of cottonseed cake from the United States in 1894 was over 600,000,000 pounds, worth more than $7,000,000.

"Nearly 4,000,000 tons of cottonseed were produced in the United States in 1895. Deducting about one-third of this, required for sowing, there would remain over 2,500,000 tons of seed. Of this amount about 1,500,000 tons were worked at the oil mills, each ton producing 45 gallons of crude cottonseed oil and 800 pounds of cottonseed cake. This estimate gives the immense total of 60,000,000 gallons of oil and 600,000 tons of oil cake produced in this country in a single year. At 30c. a gallon this crude cottonseed oil was worth $18,000,000, while the oil cake exceeded $12,000,000 in value. Of this annual production of oil about 9,000,000 gallons are used in making 'compound lard,' while most of the rest is either exported or used in the manufacture of soap. However, much cottonseed oil is used for adulterating olive, lard, sperm and other oils. The hulls of the cottonseeds are utilized for fuel and for making paper.

"Next in importance to seed of the cotton for oil production in the United States is that of the common flax, which, like the cotton plant, originated in the far East, and has been known since the times of Moses and Homer. The seeds of the flax plant contain from 30 to 35 per cent. of oil. Extracted by cold pressure, it is used in Russia and Poland as a substitute for lard and butter in cooking. It is of a pale, yellow color, and has a rather pleasant taste and smell. Rapidly absorbing oxygen and becoming thicker when exposed to the air, it is the most important of the group of drying oils. It is used in large quantities for making paints, varnishes, printers' ink and oilcloth, and to some extent for lighting and in the manufacture of soap. In 1894 the United States exported over 127,000,000 pounds of flaxseed cake, valued at $1,700,000. Three-fourths of this went to Great Britain. The supply of flaxseed comes from nearly all countries, principally from India and Russia. European Russia in 1890 had 3,780,000 acres sown in flax, and the total crop of seed amounted to 1,800,000,000 pounds, or about 21,000,000 bushels. The flaxseed crop of the United States decreased from 18,000,000 in 1891 to 7,000,000 in 1894. Our seed is exported to Canada and Europe in considerable quantities for crushing purposes, not being considered good enough for sowing.

"The common sunflower is a native of America. In 1569 it was introduced into Europe, and is now extensively cultivated there, particularly in Russia, where it has been grown for over fifty years, principally for the oil contained in its seed-like fruits. The seeds, after the shells are removed, contain 34 per cent. of oil. This oil is clear, light yellow, nearly odorless, and of a peculiar, pleasant and mild taste. It is said to be superior to both almond and olive oil for table purposes, and is used in making soap and candles, and for lighting. In Russia the larger seeds are sold in immense quantities to the lower classes of the people, who eat the nuts as we do peanuts. The stalks furnish a valuable fertilizer, while the green leaves are dried, pulverized and mixed with meal as food for cows. The stalk produces an excellent fiber. It is said that Chinese silk goods commonly contain more or less sunflower fiber. The so-called Niger-seed oil is made from a species of the sunflower family, which is a native of Abyssinia. It furnishes the common lamp oil of Upper India, where it is largely cultivated.

"The ground nut, or peanut, belongs to the bean family. It is a native of the tropics, but has been for a long time cultivated very extensively in Africa, India, the West Indies, and warmer portions of America. The seeds or kernels furnish 38 to 50 per cent. of oil. Peanut oil is chiefly extracted at Marseilles, France, which annually imports 138,000,000 pounds of ground nuts. In the United States peanuts are used principally for eating, 3,250,000 bushels being consumed annually for that purpose. In other countries they are not esteemed so highly for food; hence, nearly all of the foreign product is used for oil.

"Sesame oil is obtained from the seeds of a plant native to the East Indies, but extensively cultivated in Japan and other subtropical countries. Within a comparatively few years its culture has been undertaken by Germany, France, Austria and England. In Asia the sesame has been cultivated since the earliest time. The Babylonians and ancient Egyptians used the seeds for food, and the Egyptian women prepared a cosmetic from them. It will be remembered that sesame was the word which the unfortunate gentleman in the story of Ali Baba and the Forty Thieves was unable to remember when he wanted to get out of the cave, the door of which would not open in response to any other summons.

"The sesame plant is a hairy, sticky annual, about 3 feet high, and produces an abundance of small, flat, pear-shaped seeds. The latter are very rich in oil, yielding from 47 to 56 per cent. They are used in confectionery and for making soups. The oil is clear, of a pale straw color, sweet, and nearly tasteless. It is frequently used for adulterating almond oil, also for making soaps and perfumery, for lighting, and for the toilet. The seeds of commerce come chiefly from India and the Levant, the oil being pressed at Marseilles and Trieste. Sesame ripens its seeds in most of the middle states, and might be profitably cultivated in the south. The negroes near Charleston, S. C., are said to have grown sesame in a small way for 200 years.

"Hemp seed oil comes from an annual plant of the nettle family, which is indigenous in Central Asia and the East Indies. It is cultivated in India, Persia, China, North America, Germany, and, more than anywhere else, in Russia. Hasheesh, the celebrated narcotic, is prepared from a gelatinous resin contained in the leaves and stem. The latter also furnish the well-known fiber used for cloth and cordage. The seeds are used in great quantities for bird food. Hemp seed oil is utilized to a considerable extent in the preparation of paints and varnishes, though it does not dry as readily as linseed oil. In Europe it enters largely into the composition of soft soaps. Sometimes it is used in the old world for lighting, and occasionally for food.

"Rape originated on the coasts of Holland and England. It has been cultivated extensively in Europe since the middle of the sixteenth century. In France it occupies seven-tenths of the acreage of oil seeds in cultivation. In Germany the annual crop of rape seed is worth over $7,000,000. The total consumption of rape oil in Europe is estimated at nearly 330,000,000 pounds per annum, valued at over $43,000,000. India annually exports from 2,500,000 to 4,000,000 hundredweight of rape seed. Rape oil is extensively used for lamps, for lubricating machinery, and for adulterating both almond and olive oils. It is frequently adulterated with poppy seed, flaxseed, mustard seed, whale and fish oils. Considering the great demand for rape seed as bird food, as well as for oil, and the good price it brings, its culture seems well worthy of a trial in the United States. Rape seed could be successfully raised in any of the northern or western states, and probably also in the south. The varieties of rape useful as forage are of no value for seed.

"Poppy seed oil is furnished by the seeds of the opium poppy, an annual plant which originated in Asia, where it is cultivated extensively, though principally for the juice derived from its capsules. The oil is pale yellow, with a bland and slightly sweetish taste, and totally destitute of narcotic properties. Poppy seed oil is used for salads, paints, soaps, illumination, and to adulterate olive and almond oils. It is worth 35c. a pound in this country.

"Among other plants whose seeds furnish oil, grown in the United States, either wild or under cultivation, are melon, maize, tobacco, soja bean, fennel, dill, anise, parsley, caraway, coriander, celery and wormseed. Oils from some of these seeds are used in the preparation of medicines, and bring good prices."

BRITISH BOARD OF TRADE RETURNS.

The Dundee *Advertiser* says: "The returns of the trade of the country during March were issued yesterday, their publication having been delayed beyond the usual date in consequence of the Easter holidays. Both the import and export trade again exhibit improvements, but the gains are very much less than those shown by the February returns. The imports for March were valued at £38,344,750, compared with £35,959,890, an increase of £2,384,860. For the three completed months of this year the total value amounts to £112,295,342, and shows an increase of £11,457,482 compared with the figures for the same period of last year. The export of British and Irish produce and manufactures for March was valued at £20,422,419, the improvement on the month amounting to £1,899,389. Over the three months the total increase amounts to £8,512,682, the value for the past quarter being £61,233,043, as compared with £52,720,361 for the corresponding period of last year.

The export of foreign and colonial merchandise for the past month is of the value of £4,623,326, a decrease of £223,273. Over the three months, however, there is still an increase of £1,945,584, the total value for the past quarter being £15,087,265, compared with £13,141,681 for the same period of 1895.

The following are the usual summaries relating to the month:

TOTALS OF IMPORTATIONS.[1]

	1895.	1896.	*Inc.*	*Dec.*
1. Animals, living (for food)	£620,971	£946,257	£325,286	....
2. Articles of food and drink duty free	10,691,199	12,132,204	1,441,005	....
Articles of food & drink dutiable	2,450,617	2,188,624	....	£261,993
Tobacco dutiable	229,747	351,105	121,358	....
3. Metals	1,319,370	1,580,956	201,586	....
4. Chemicals, dye-stuffs & tanning substances	885,527	953,968	68,441	....
5. Oils	680,297	581,593	....	98,704
6. Raw materials for textile m'f'tures	8,049,763	7,094,103	....	955,660
7. Raw materials for s'nd'y ind'stries & m'n'factures	3,131,237	3,330,295	199,058	....
8. Mn'f't'd articles	6,508,004	7,368,203	1,360,199	....
9. Miscel's articles	1,251,305	1,226,724	....	24,581
Parcel post	81,853	90,718	8,865	....
Total value	£35,959,890	£38,344,750	£2,384,860	....

EXPORTS OF BRITISH PRODUCE AND MANUFACTURES.

1. Animals, living	£42,313	£54,918	£12,605	....
2. Articles of food and drink	815,028	802,682	....	£12,346
3. Raw materials	1,418,960	1,315,365	....	103,595
4. Articles m'f't'd & partly m'f't'd, viz.:				
Yarns and textile fabrics	8,505,620	9,343,265	837,645	....
Metals & articles m'f't'd therefr'm (except mach'y)	2,229,136	2,684,456	455,320	....
Machinery & mill work	1,121,680	1,341,020	219,340	....
Apparel & articles of personal use	777,546	937,875	160,329	....
Chem'cls & chemical & medicinal preparations	739,269	867,574	128,305	....
All other articles, either m'f't'd or partly m'f't'd	2,767,391	2,931,006	163,615	....
Parcel post	106,087	144,258	38,171	....
Total value	£18,523,030	£20,422,419	£1,899,389	....

"Taking the imports, it will be seen that the individual increases are much more moderate this month, while in four instances there have been fallings off. The increase in duty-free articles of food and drink is found chiefly in corn stuffs, of which maize and wheatmeal and flour show largely increased imports. In manufactured articles the increased trade has been chiefly in silks and woolen manufactures, but nearly all classes of goods enumerated exhibit increases. In linen yarn, however, there is a decline of 289,820 pounds. The increase in metals lies chiefly in iron, but the trade in tin and copper (except ore) has also increased, the most noticeable decrease being in quicksilver. The trade in raw materials for textile manufactures has been somewhat irregular. A slight decrease is shown in the import of cotton, and in jute there is a falling off of 32,788 tons. In flax, however, the import has increased by 2,749 tons, and of hemp by 2,674 tons. Most varieties of silk are back, and wool (except alpaca and woolen rags) show a decrease.

"In the export trade the changes either way have been slight. The increase in yarns and textile fabrics has almost entirely taken place in woolen and worsted stuffs, but every class of goods enumerated shows some increase. As regards jute, while the export of yarn has fallen off by 1,780,000 pounds, piece goods have increased by 2,856,700 yards, and other manufactures in value by £1,947. In linens the position is reversed. There is an increase of 168,400 pounds in yarn, a decrease of 4,545,800 yards in piece goods, and an increase in the value of the other manufactures of linen amounting to £3,101. In woolen damasks, etc., the increase in value amounts to £83,337, in woolen and worsted yarn to £61,594, and in woolen tissues to £97,291. In metals the increase is distributed over all classes except lead, the greatest increase being here also in iron. The increase in machinery and mill work lies again almost entirely in mining and textile machinery, the total value of the latter having increased from £475,997 in March last year to £534,436 last month. The greatest increase was to the United States, there also being a substantial increase in that sent to the East Indies. The decline in raw materials is in great part accounted for by the fall in price of coal and patent fuel."

On the general subject of British foreign trade the London *Daily Financial News* says: "A country which is in such a position—dependent so greatly on the outer world for its food supplies—cannot afford to leave any stone unturned by which it is possible to stimulate its export trade. The fact that a great many manufactured articles which could be made just as well at home, if the conditions were favorable, come here from abroad is one which might well engage the attention of practical men of business engaged in the trades affected. If we are to find employment for the ever-increasing army of British workmen and women there are only two courses: One is to protect home industry, and the other is to beat the whole world in the superior quality of our goods. Can any Englishman honestly say that we are at present able to do the latter?"

PIRACY ON THE MOORISH COAST.

A press correspondent at Gibraltar gives the following particulars of an act of piracy committed by Moors on the British felucca San José, of Gibraltar, recently. "The San José left Gibraltar on March 26 for Tetuan. On the 28th, while becalmed about three miles from the African coast, she was boarded by Riff pirates, who compelled the master, crew and passengers, six in all, to lower their boat and tow the vessel inshore. The cargo, stores, $750 in money, and everything that could be removed were carried off. While the looting was being carried out, the passengers and crew were ordered by a number of the Riffs to tow the vessel out to sea in order to deprive the rest of the pirates of their share. The other Riffs promptly opened fire upon the captives, who were subsequently tied together in couples and sold by auction for $150. In the afternoon of the following day they were placed upon the San José utterly destitute. They reached Gibraltar on March 31, after great privations, neither provisions nor water having been left on board."

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

PUBLICATIONS.

Bondholders and Stockholders
SHOULD READ REGULARLY

THE BOND RECORD,

a monthly Journal of Economics and Finance, containing latest earnings, reorganization news, dividends, quotations, besides impartial, expert dissections of the annual reports of all railroad and other public corporations, with a view to presenting a true statement concerning financial condition, physical characteristics and condition and traffic; also articles upon the leading financial questions of the day, written by the ablest specialists.

For sale on all News-Stands, and at 20 Nassau Street, New York. $3 per year, 25c. per copy.

FINANCIAL.

TO THE HOLDERS OF

St. Louis & San Francisco Railway Company

4% CONSOLIDATED BONDS.

At the request of the New York, Boston and Amsterdam (Holland) Committees, formed for the protection of the above-named bonds, this committee has agreed to act as a Reorganization Committee, pursuant to a Plan and Agreement dated April 21, 1896, copies of which may be obtained from any of the undersigned, the Secretary, or the depositaries.

Holders of Bonds should forthwith deposit them at either The Mercantile Trust Company, 120 Broadway, New York City, or at its agency for this purpose, American Loan & Trust Company, 53 State Street, Boston, Mass.

Holders of 4 per cent. Consolidated Bonds paying the assessment of 10 per cent. will receive for each Consolidated Bond of $1,000,

$140 IN FIRST PREFERRED STOCK,
$1,000 IN SECOND PREFERRED STOCK,
$1,800 IN COMMON STOCK,

and will have the right to subscribe to securities as set forth in the plan.

The first instalment of the assessment, 5 per cent., on the Consolidated Bonds, must be paid at the time of deposit; the second instalment, 5 per cent., July 15th, 1896. The right to subscribe to the securities offered for subscription to depositing Bond holders must be availed of at the time of deposit of the Consolidated Bonds.

Negotiable Trust Certificates will be issued for money paid on account of such subscriptions.

JUNE 1ST IS THE DATE SET FOR FINAL DEPOSIT UNDER THE PLAN; THEREAFTER BONDS, IF TAKEN AT ALL, WILL ONLY BE RECEIVED UPON TERMS TO BE ANNOUNCED.

THE INTERESTS THAT HAVE ALREADY ASSENTED TO THE PLAN COMPRISE MORE THAN 75 PER CENT. OF THE BONDS. THE PLAN THEREFORE WILL ALMOST IMMEDIATELY BECOME OPERATIVE.

Holders of Certificates of the Holland Committee should present the same at the office of that Committee for stamping.

NEW YORK, April 21st, 1896.

FINANCIAL.

Northern Pacific Reorganization.

NEW YORK, PHILADELPHIA AND BERLIN,
April 24, 1896.

Holders of over 92½% in amount of

Northern Pacific R. R. Company's

General Second Mortgage Bonds,
General Third Mortgage Bonds,
Dividend Certificates,
Consolidated Mortgage Bonds,
Collateral Trust Notes,
Preferred Stock,
Common Stock,
AND
Northwest Equipment Stock,
AND
Northern Pacific & Montana Railroad Company First Mortgage Bonds,

having deposited the same under the Plan and Agreement of reorganization dated March 16, 1896, said Plan and Agreement are hereby declared operative.

Holders of outstanding securities of the above-described issues may still deposit same under the terms of said Plan and Agreement, but only on payment of the following penalties:

On Bonds, Dividend Certificates, Notes and Equipment Stock..... 2%
On Northern Pacific R. R. Co. Preferred Stock..... ½%
On Northern Pacific R. R. Co. Common Stock..... ¼%

The right is reserved to terminate this privilege of deposit at any time and without notice.

Holders of certificates heretofore issued by the Mercantile Trust Company of New York for Bonds deposited under the Bondholders' Agreement of February 19, 1894, not already stamped by us as approving the Plan and Agreement of March 16, 1896, are hereby notified to present their certificates at one of our offices on or before Thursday, May 7th, 1896, in order that we may stamp their approval thereon.

The Managers hereby give further notice that they will exclude absolutely from the Plan and Agreement any and all bonds represented by any such unstamped certificate, unless, on or before said date, such certificate shall be so presented and stamped.

BALTIMORE & OHIO RAILROAD CO.

5% Bonds of 1925.
(LOAN OF 1885.)

In consequence of the appointment of Receivers of the Baltimore and Ohio Railroad Company, and with a view to the protection of the interests of the holders of the above mentioned Bonds, we invite holders of such Bonds to deposit the same, with all Coupons attached, at our office, on or before June 1, 1896, subject to an agreement dated April 10, 1896, between Speyer & Co. of New York, Speyer Brothers of London, and the depositing Bondholders. Copies of such Agreement may be obtained on application at our office.

We will buy, on the terms of the Agreement, the Coupons and interest instalments maturing August 1, 1896, on deposited Coupon or Registered Bonds, in case the Baltimore and Ohio Railroad Company should make default in paying the same when due.

Trust Receipts will be given for Bonds deposited, and such receipts will be exchangeable for engraved Bearer Certificates. Application will be made to the New York and London Exchanges for the listing of these Certificates.

Speyer & Co. and Speyer Brothers will make no charge against depositing Bondholders for their services.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 2, 1896.

A decree was signed by Judge Acheson, of the United States Circuit Court at Philadelphia, yesterday, for the sale of the property of the Philadelphia & Reading Railroad Company, and of the Philadelphia & Reading Coal and Iron Company, under foreclosure proceedings instituted on behalf of the general mortgage bondholders. The decree of foreclosure also directs a separate sale of some miscellaneous assets held by the receivers, and their application to the payment of the receivers' indebtedness. This decree of Judge Acheson follows promptly upon the action of Judge Jenkins, at Milwaukee, in reference to the Northern Pacific Railroad, to which a more particular reference is made in another column. Taken together, these decrees are of great importance to all holders of American railway mortgage bonds, as evidencing judicial recognition, after long-continued opposition by unsecured creditors and stockholders, of the principle that property mortgaged is really available security in case of need.

Unusual attention has been attracted by the Republican convention in Illinois for a variety of reasons, some of which have had to do with the question of candidates, and some with the attitude of the party in that state on the monetary question. The convention adopted a plank which declared that the Republicans of Illinois are emphatic in their demand for honest money, that they are opposed to any and every scheme that will give to the currency in any way a depreciated or debased value, in any respect inferior to the money of the most advanced and intelligent nations of the earth, and that they favor the use of silver as currency, but to the extent only and under such restrictions that parity with gold can be maintained. It was thought at one time that the Illinois Republicans would present the name of a man from that state for the presidential nomination, but the convention declared for a candidate from another state whose marked success in the conventions seems to point to the prominence of protection as an issue in the coming electoral contests.

In the Democratic state conventions recently held the sound money men have held their own, though locality continues to determine to a great extent the nature of the declarations on the currency question. One is scarcely surprised to learn that the convention in Mississippi adopted a declaration favoring the free and unlimited coinage of silver and gold at the ratio of 16 to 1 without waiting for the action or coöperation of any other nation, instructing the delegates to the National Democratic Convention in favor of a platform embodying these principles, and directing them to vote for no man for President or Vice-President who is not fully and unequivocally in favor of the principles above expressed. On the other hand, in Pennsylvania the Democratic convention declared itself in favor of a firm, unvarying maintenance of the gold standard, and while favoring the most liberal use of silver, consistent with the enforcement of a gold standard, absolutely opposed to the free coinage of silver and to the cumpulsory purchase of silver bullion by the government. In Michigan there was a test of strength between the silverites and the sound money men, which resulted in the tabling of a resolution in favor of free coinage and the adoption of one commending the administration for its adherence to the national platform of 1892, which demanded the maintenance of the parity of the two metals.

As a step in the direction of constructing a deep-water canal connecting the great lakes with the ocean, a bill has been introduced to incorporate the Maritime Canal Company of America. This bill empowers the company to construct canals from some point near the head of tidewater navigation in the Hudson river to Lake Champlain, from Lake Champlain to Lake St. Francis, from the head of Lake St. Francis to the Long Sault Rapids on the St. Lawrence, and from Lewiston on the Niagara river to a point above Niagara Falls, all to have channels of twenty feet navigable depth and sufficiently wide for the largest vessels to pass. The company is also authorized to widen, deepen and straighten the Champlain and Hudson Canal between the points where the canal crosses the Champlain and Hudson Canal, and provides that the company in so doing shall donate to New York state locks connecting its own canal with the Champlain and Hudson Canal and the Glens Falls feeder, such locks to be of the dimensions of the present Erie Canal locks.

Arbitration is to be resorted to to settle the boundary controversy between Nicaragua and Costa Rica. A convention has been agreed upon by the governments of the two republics for the demarcation of the boundary line between them, which binds each of the countries to appoint an engineering commission to mark the boundary in accordance with the treaty of 1858, as interpreted by President Cleveland as arbitrator, and provides that the President shall be requested to appoint an engineer to accompany the survey, whose decision shall be final in any dispute that may arise between the two coöperating commissions. As soon as the convention is ratified by the legislatures of the two countries, who will share the expenses and salary of the American engineer, the work of marking the line from the Atlantic to the Pacific is to commence and be completed within twenty months. The two governments, which have long been at odds over the boundary question, now believe that they have found a way out of their difficulties through the arrangement referred to. The settlement of the question is believed to have an important bearing on the proposed Nicaragua Canal by fixing the undisputed ownership of the territory through which it is to be constructed.

May Day in Europe has not attracted the attention this year that attended its observance some years ago. Reports from the principal continental cities indicate that the day was generally observed as a holiday by the workingmen, but they agree in declaring that the observance was quiet. As a general thing the observance was confined to processions and the holding of meetings, at which demands for an eight-hour day and universal suffrage were made in resolutions. Precautions against disturbances were generally taken by the authorities, but they seem to have been unnecessary.

A new French Cabinet has been installed under the premiership of M. Meline. The new Premier presented a declaration of policy to the Chamber of Deputies, in which he laid stress upon the importance of the fiscal reforms to be proposed by the government. The probate laws and the laws regulating the traffic in drink, he said, would be introduced in the budget, and would be operated under a system which dispensed with an inquisitor, or any other arbitrary measures, and assure a better division of the direct taxation, thus relieving small taxpayers. The government, he said, would vigilantly apply the economies which the nation demands, and simplify the present complicated administration. They would also spare no effort to aid the interests of agriculture, to complete the national defense, to regulate the hours of labor and the liability of employers, and to organize pension funds. The prosperity of the nation, he declared, depended upon Parliament abandoning sterile discussion and limiting its labors to such legislation as would serve the interests of the working classes. The stagnation of business had been chiefly caused by an uncertain and narrow policy. Order and the progress of labor were imperative and equally advantageous in home and foreign affairs. France, he said, is weary of agitation and wants a truce from enfeebling dissensions.

The South African question was brought into prominence early in the week by the announcement that the Transvaal court had passed sentence of death upon a number of the leaders concerned in the recent raid. This announcement produced much excitement in England, though it was believed that the sentence would be commuted. This belief turned out to be well founded, an account of the commutation of the sentence to a term of imprisonment having since been cabled. One of the sensational features of the affair has been the publication of a number of cipher dispatches, which, it is alleged, demonstrate the connection of some prominent men in South Africa with the raid into the Transvaal. At the close of the week the reported assassination of the Shah of Persia has taken the place of chief prominence as an event in foreign affairs, mainly, of course, because of the possible political bearing of his sudden taking off.

Among the countries to take prompt advantage of the recent rise of Japan to its present position of importance in the far East is Germany, whose government, as is learned from a report of the United States ambassador at Berlin to the State Department, has negotiated a new commercial treaty with the island empire. The terms of the treaty have not yet been made public, but it is understood that it is to continue in force for twelve years, and that Japan has granted material reductions in duties upon manufactured articles imported from Germany, while Germany accords Japan the treatment of the "most favored nations." It is stipulated, it is said, that the commercial part of the treaty may be changed in 1904, when the treaties with Austria and Russia terminate. A convention is also said to have been made in regard to patents, trade-marks and on the subject of consular jurisdiction, to go into effect in 1899.

THE MONEY MARKET AND GOLD EXPORTS.

It has been frequently pointed out that a firm money market in New York which would attract loans of foreign capital would be one of the most effective means of checking gold shipments and the accompanying withdrawals of specie from the United States Treasury. Reference was made in these columns last week to the beneficial effects on the exchange market, and consequently on the maintenance of the Treasury gold reserve, of the recent disposition on the part of foreign interests to again put out time money in Wall street. It was this process which has been, to all appearances, responsible for the comparative freedom of the Treasury gold from depletion since the closing of the last government loan.

The present week has exhibited the contrary influence in operation. The increasing ease of the local money market, the accumulation of idle funds, and the decreasing demand from borrowers on collateral, have all tended to restrict these loans of foreign capital. In spite of the feeling in financial circles that rates for money are altogether likely to become harder in the summer, more or less difficulty has been experienced by local institutions and lenders of all classes in placing time loans upon a satisfactory basis as to rates. It is understood that in some cases the representatives of foreign capital have shown a disposition to make concessions, but the effect of the entire situation has been to check the movement of money to this side of the ocean, and to deprive the foreign exchange market of the supply of bills from this source, which, as noted before, was the chief factor in producing the recent depression of exchange.

Supplementing the chilling effect of the renewal of the Transvaal troubles on London participation in our market for securities, this falling off in the supply of loan bills has been followed by a prompt advance in exchange rates, and has made gold exportations once more a serious question in the money market and the speculative position. The gold exportations announced for to-day's steamers have not, it is true, been on any alarming scale. The first estimates put them at larger figures than the $1,450,000 that actually goes out. These figures, however, had to be revised, in view of the narrow condition that prevails in the exchange market at present, and with particular reference to the very limited demand that exists for remittances. In other words, the inability of bankers to sell drafts at present is an obstacle to gold transfers, regardless of the profit there would be in the transactions.

These uncertainties render foreign bankers, as a class, very chary about making any definite predictions in regard to the future of the exchange market, or the probable extent of the gold movement. There is, indeed, hope in such quarters that the recent symptoms of revived foreign interest in our securities market will not fade away entirely, but will in time bear fruit. It is also intimated that any hardening of money rates or increase in the demand for foreign loans would meet with a very rapid and decided inflow of such funds. In fact, the state of the money market continues to be, as in the past, a factor of primary importance in this connection. It cannot be said that the action of the Treasury in calling this week for a further installment of about $3,000,000 of the portion of the payments for the late bond issue, which were left in certain banks, was directly intended to create an impression on interest rates. The more rational belief is that the Treasury officials desired to strengthen their gold balance against possible withdrawals for export. At any rate, the condition of money at the moment admits of no important change from such an inadequate cause, and it is probable that the whole of the amount so held by the banks for account of the Treasury (about $11,000,000 in all) could be called in without producing more than a temporary hardening of rates.

UNION PACIFIC'S YEAR.

It is now conceded that no action whatever will be taken on the Pacific railroad funding bill at the present session of Congress. This fact is admitted by its friends, though it is claimed, with some foundation, that there is a much better feeling among our legislators toward the companies, and toward the Union Pacific in particular. It is, of course, difficult to see how the reorganization proposed by the committee which was formed last, and which now controls a large majority of the stock and other securities affected by the proposed arrangement, can be carried out without legislation, unless, indeed, the reorganizers are willing to run the risk of a protracted and perhaps unsuccessful litigation. At the same time it must be duly recognized that the labors of the committee have not been without fruit, and that, in spite of the continued local opposition to any plan of readjusting the indebtedness of the companies to the government, which proceeds mainly from sections where a selfish interest in having the government assume the operation of the lines and conduct them at a loss for the benefit of particular communities, the steps taken since the reorganization plan was formulated have tended to bring public opinion around to a just and satisfactory settlement of the whole question.

The annual report of the Union Pacific Railway for the year 1895, which was made public this week, does not possess any particular bearing upon this main question. Its figures would, however, tend to show the necessity of a reorganization and readjustment of the capital of the company and its branches. The figures for the entire system of 5,327 miles, contrasted with those of the years 1894 and 1893, are as follows:

Years.	1895.	1894.	1893.
Gross earnings	$22,554,738	$23,354,712	$27,840,045
Net earnings	8,362,140	6,475,925	9,955,839
Taxes	1,181,924	795,504	1,196,330
Surplus	$7,180,216	$5,680,421	$8,750,508
Other income	1,736,886	770,116	938,267
Total income	$8,917,102	$6,450,537	$9,697,776
Charges	10,431,422	10,407,857	10,721,574
Deficit	$1,514,319	$3,957,320	$1,023,797

From this it would appear that, despite a small decrease in the gross earnings as compared with those of the preceding year, the receivers were successful in reducing operating costs, and thus swelling the net earnings. The same features appear in connection with the figures of the Union Pacific proper of 1,827 miles, which is as follows:

Years.	1895.	1894.	1893.
Gross	$14,336,251	$14,817,806	$17,376,791
Net	4,902,157	4,315,077	6,204,716
Net income	6,806,825	5,055,048	7,641,467
All charges	7,574,788	6,917,781	7,410,199
Deficit	767,962	1,862,733	Sur. 231,267

The report being that of the receivers, very little in the way of comment or explanation is attempted. The bare figures for the company and its branch and operated lines are given with as little in the way of explanation as possible. It is, however, stated by those favorable to the reorganization plan as formulated by the committee that the earnings for the year just ended would, under the plan, be adequate to meeting all the fixed charges contemplated by it, and still leave a dividend for the new preferred stock.

The only other statistics of any interest refer to the company's tonnage. It seems that in the year under consideration the total amount of freight handled was 4,224,375 tons, against 4,576,384 tons in 1894, a decrease of 352,009, and that the rate per ton per mile was 1.065c., against 1.128c. in 1894, a decrease of .063c. The heaviest decline in freight was in grain, the aggregate shipments of which were only about one-half of that in 1894. Live stock freight also fell off, and there was a smaller movement of coal upon the company's lines.

THE NICARAGUA CANAL PROJECT.

The most interesting statement as to the feasibility and probable cost of the projected Nicaragua Canal that has yet been presented was that made by Colonel William Ludlow before the House Committee on Commerce this week. Colonel Ludlow explained to the committee that the board had had no instructions from anybody with regard to the conduct of their investigation, except those received from the late Secretary of State, Mr. Gresham. In blocking out the work, they estimated that six months would be necessary in order to complete it, and it was decided to divide the time between their labor in the field and in New York. The board spent three months on the isthmus, forty days of this time being employed in Nicaragua. They went over every foot of the route, and made as thorough an investigation of the physics of the situation as was possible in a journey of that character. The members of the board were, Colonel Ludlow said, the only engineers who had ever been over the entire route.

In reply to questions, Colonel Ludlow said that he thought the Tola dam was the worst feature of the project, because there was no foundation for the canal. As to the possibility of the canal being a source of naval weakness, he said that if the United States wanted to protect the canal, some naval force would be required at both ends. The board had, in fact, kept in mind the necessity of a canal capable of accommodating the needs of the navy. Colonel Ludlow, continuing, said that his investigations of foreign canals had not affected his view of the physics of the Nicaraguan question. The construction of the Ochoa dam, he said, gave great cause for consideration, because it was absolutely without precedent in canal building. All the members of the board, he said, coincided in the belief that a canal was practicable, but that the information necessary to determine within what limitations its construction was practicable was not available.

Touching the question of cost, he said that he did not think it could be built for $125,000,000. The board had made a provisional estimate of $134,000,000 to cover the cost of construction, but he now wished that they had fixed it at $150,000,000. For that sum, he thought, a canal might be constructed which would be safe and commodious and sufficient for commercial purposes. Before he could speak accurately, however, some hydraulic data must first be procured. He thought there were better ways of building the canal than those formulated by the company, some of which he regarded as impracticable. A dam at Ochoa was feasible, he thought, but he could not give a definite plan or its cost. It was a question of putting in properly a sufficient quantity of the right material. He seriously objected on account of danger to using this dam as a waste weir. The dam, he said, should be constructed so that no water whatever could run over it. This was an extremely important piece of work, and much depended upon it. He could not say how long it would take to build the canal. He would approximate the time between seven and ten years.

Regarding the question of the advisability of the government entering upon the construction of the canal, Colonel Ludlow said that it was a gigantic undertaking, and he would suggest a thorough investigation of the project before the government should be committed to it. He was in favor of getting a canal through, but wanted to do it right. A thorough examination of the canal route could, he said, be made within two years. Before he had made an examination of the canal route, he said, he had a preconceived opinion in favor of the project and of the Menocal route, but now he had grave doubts as to the feasibility of the whole project. He did not think that the Ochoa dam could be constructed as proposed by the company. If this were so, and a masonry dam could not be built, the plan for a high-level canal would have to be abandoned, in which case the alternative was to build a low-level canal along the river. When the members of the board made their report they supposed that the summit level of the lake was to remain at 110 feet above the sea level. It was found that this was not the case. A fixed summit level was necessary and a fluctuating one would not do. A change of two, four or six inches in the depth of the canal would be a very serious matter, as a ship loading for passage through the canal would never know what depth she would have. A great part of the national interest in the canal was, Colonel Ludlow said, the supposition that it would allow our great war vessels to pass from ocean to ocean. Since the report of the board was made it was learned that this was not the case. He considered a fluctuating level inadmissible in a work of this kind. No canal, he said, could be constructed on such a basis, and the board had serious doubts whether the lake could be regulated within a three-foot range. These statements of Colonel Ludlow would seem to indicate that the project of constructing a Nicaraguan canal will bear further investigation before the government is committed to it. It will not do to embark on the undertaking without more definite information than the board has thus far been able to gather.

TO DIVERT GRAIN TRAFFIC.

The striking increases in the exports of wheat and of Indian corn from Newport News, New Orleans, and particularly from Galveston, in the last year or two, have begun to excite the attention of the grain trade at New York, Philadelphia and Baltimore. One manifestation of this interest is found in the revival of the complaint at the east of a discriminating rate on the part of the trunk-line railroads which carry the bulk of the grain brought to the Atlantic seaboard for export.

It would appear as if the export movement of corn and wheat from the far western and southwestern states via New Orleans and Galveston had acquired some permanence. With deep water in the harbors of those cities, elevators, the habit of tramp vessels of looking for grain cargoes there, and, above all, a saving in rail rates

to the gulf, in addition to low rates by water to Europe, it would seem as if the larger eastern Atlantic ports would have to do without a portion of their former rate of export in cereals hereafter.

In order to secure what are described as just rates of transportation from the central west to the gulf, an effort is making to establish central markets with ample elevator capacity. This is notably the case at Wichita, Kans. The *Beacon*, of that city, mentions that the farmers of Kansas, Nebraska, Colorado and Oklahoma are directly interested, and find that Wichita is "the natural and logical place for such market and elevators, not only from its natural location, but its superior railroad facilities." This movement has progressed to such an extent that the manager of the Galveston Commission Company, working with the Wichita Commercial Club, after interviewing hundreds of farmers, bankers, merchants and grain dealers over the entire territory named, "submits a proposition to erect a grain elevator here of a capacity of at least 500,000, and, possibly, 1,000,000 bushels."

The object is to concentrate the outbound grain tonnage as at other regular markets, to obtain rates. With the establishment of an elevator railroads can be offered better facilities, near where the grain is grown and on their own lines, where they can keep control of their cars and have them returned quickly, secure both the in and out haul; also, for the longer haul, load their cars to full capacity and in solid trains. Thus they may seek business at minimum rates.

The ocean transportation from Galveston is done, generally, by tramp vessels. With the grain elevator trade concentrated at one point so that a regular trade with vessels could be contracted for months ahead, it is believed that a lower rate can be secured. From this it is inferred that if Wichita can give Galveston a uniform business, "a saving to the producer of from 4c. to 6c. a bushel on corn is easily obtainable."

In the prospectus of the plan to build the elevator at Wichita by the aid of coöperation from farmers and others throughout the territory interested, it is emphasized that the west (in the opinion of the projectors of the enterprise) should have "as few intermediate interests as possible to be supported between the producer and consumer." It is added that "grain passing through the east to Europe has to pay tribute to one or two railway lines to Chicago; a commission and elevator charge there, and perhaps an intermediate commission and elevator charge; then a lake transportation charge; an elevator charge at Buffalo; a canal or railroad charge to New York; expensive terminal or elevator charge at New York, possibly another commission charge there, and then the ocean rate, while with us you would have practically one railroad, one ocean and one commission charge, as the elevator here and at Galveston and the wharfage there, including the commission, would in a manner be all as one expense."

The average crop yield of the parts of Nebraska, Kansas and Oklahoma most interested is estimated at 150,000,000 bushels of corn, 40,000,000 bushels of wheat and 30,000,000 bushels of oats. The value of these cereals through an elevator market and handling as proposed in export crop years for corn and wheat and to domestic markets on oats, it is declared, "would be increased approximately as follows: Corn, 4½c. a bushel, or $6,750,000; wheat, 6c. a bushel, or $2,400,000, and oats, 2c. a bushel, or $600,000, or a total of $9,750,000 a year additional wealth to the west, which means that much more purchasing power to the producer and business for the merchants and bankers, as well as a proportionate increase to the railroads in a return haul of merchandise."

MANHATTAN ELEVATED PROJECTS.

For some weeks past the affairs of the Manhattan Elevated Railway have been largely in public view. The effect of competition by the new cable road constructed in New York city upon the earnings of the Elevated system has been referred to at length in these columns in connection with the latter's annual reports. The introduction and passage by the legislature of a bill requiring the Elevated to substitute electricity or gas for the old-fashioned oil lamp used for lighting its cars has also been an object of attention, while considerable public interest has attached to the efforts of the Elevated managers of New York, in conjunction with the controlling interest in the similar systems of Brooklyn, to secure a lease of the Brooklyn bridge railroad facilities, and thus inaugurate a direct connection between the elevated railways now existing within the limits of the Greater New York.

All of these matters have, however, been eclipsed by the developments, or rather the supposed developments, in connection with plans for increasing the rapid transit facilities which New York's elevated roads now supply. That they have been inadequate to the needs of the population and the northward extension of the city's built-up portion admits of no qualification. It is this state of affairs that produced the agitation resulting in the appointing of the present Rapid Transit Commission, and the ratification by public vote of the plan for an underground system of transit within the city limits. The difficulties that have attended the financial and practical execution of the Rapid Transit Commission's plans have not been lost sight of, creating as they do some doubt in the public mind as to whether they can be successfully executed. Under these circumstances the proposition to improve the facilities which the elevated structure afford has made considerable impression upon the public mind, in spite of the fact that it is somewhat doubtful what the plans under consideration by the company's management are, or how the numerous difficulties, both financial and engineering, which will be encountered in carrying them out may be surmounted. At all events, there have been conferences between Messrs. Gould and Sage, representing the Manhattan Railway Company, and the mayor of New York on behalf of the city, and it is understood that suggestions have been put forth by the company to the effect that it is considering the feasibility of double-decking its present structure on certain lines, and thereby affording tracks which can be used for express trains, and by this means give really quick transit between the lower and upper sections of the city. It is also understood that this embryo plan of the Elevated managers makes it a condition that the city shall indemnify the company against the land damages which might be assessed on behalf of property owners along the line of the road whose light and air would thus be interfered with. This latter proposition has caused a great deal of talk among persons interested in rapid transit, and, it may be said, has tended to throw cold water on the scheme. According to authorities connected with the Rapid Transit Commission, such a plan would be impracticable, the constitution of the state of New York prohibiting the city from lending its credit to a private corporation.

It does not seem that the matter, however interesting it may be to the metropolitan public, has as yet got far beyond an informal stage. It is, however, understood that drawings and specifications for a double-decked structure, to be created by partly rebuilding the existing lines in Sixth and Third avenues, have been prepared, and are now being considered by the officers of the Manhattan Company. It is also understood that the cost of the proposed structure would be from $20,000,000 to $25,000,000, the plan, as devised, being to make the upper track practically independent of the lower. It is also proposed to have but five stations between the Battery and Harlem, with an elevator at each station, and arrangements by which passengers getting off at express stations could continue their journey on a local train without extra charge. From utterances of certain influential directors of the Manhattan Railway, it can be gathered that this is not a new idea with the management of the company. It was examined into some years ago and pronounced practicable by eminent engineering authority. It is, however, said that the owners of the Manhattan appreciated the prejudice which existed in the public mind against the company, and were, moreover, stopped from giving it practical consideration by the fear of excessive land damages, of which they have had abundant experience in connection with the suits of that nature growing out of their existing system of lines.

VALIDITY OF FUTURE CONTRACTS.

Among the cases recently decided by the Supreme Court of the United States was one involving the validity of contracts for futures. This case (Hansen vs. Boyd et al.) arose upon an action instituted by the defendants in error to recover from the plaintiff in error the amount of payments alleged to have been made between August 24, 1888, and June 8, 1889, on account of the purchase and sale of grain made for the plaintiff in error in the city of Chicago, and also the value of services rendered in connection therewith. It appeared that the defendants in error were partners in business in Chicago, doing business as commission merchants on the Board of Trade of that city, and having a branch office in Minneapolis. The plaintiff in error was engaged in the general merchandise and grain business at Benson, Minn., where he owned and operated a grain elevator and warehouse, and, prior to his transactions with the defendants in error, he had sold wheat through brokers on the Board of Trade at Chicago and the Chamber of Commerce at Minneapolis, had had some option deals, and was generally familiar with the manner in which business was done on those boards.

In August, 1888, the plaintiff in error called at the office of the Chicago firm's agent at Minneapolis and gave him an order for the purchase of 5,000 bushels of December wheat. He testified that he supposed the transactions were to be conducted for him on the Chicago Board of Trade, but claimed that no allusion was made to the rules of the Board of Trade. He also testified that it was not his intention to buy or sell any grain on any of the orders given, but that he contemplated mere speculations on margins. The agent of the Chicago firm, however, testified that when the first order was given he told the plaintiff in error that he would have to abide by the rules of the Chicago Board of Trade; that he informed him as to what those rules were concerning the handling of grain on that board, and also informed him that a delivery was contemplated in every trade, either by buyer or seller; that in case wheat was delivered he must take care of it and pay the purchase price and interest on the money, etc.. It appeared that in none of the transactions was wheat offered or furnished by Hansen or to him personally, but the purchases and sales were all made on the Chicago Board of Trade, according to the rules of that board.

The plaintiff in error became delinquent in the furnishing of margins on his contract, and in April, 1889, the defendants in error sold 40,000 bushels of May wheat which had been bought on his account, and charged up against him a loss of $11,500. The Chicago firm had asked him for authority to "transfer" the May wheat to June wheat, and not hearing from him to their satisfaction, bought 40,000 bushels of June wheat, sending him a memorandum thereof and an account of the loss on the May wheat, with a request for an immediate settlement. On June 8, 1889, the firm closed out the June wheat at a loss. Upon his refusal to pay suit was brought. The plaintiff in error set up the illegality of the transaction, alleging that the orders given by him were mere wagers on the price of wheat, while the defendants in error contended that the transactions were bona fide purchases and sales of wheat under the rules of the Board of Trade. The defendants in error recovered judgment for the full amount claimed.

The Supreme Court of the United States has rendered a decision in which it refuses to disturb this judgment except in one particular. The judge in the trial court ruled, in effect, that if the jury found that the plaintiff in error made no objection to the action of the defendants in error in "transferring" the May to June wheat, he must be held to have ratified their acts. The Supreme Court ruled to the contrary, and ordered that if a remittitur, or the amount depending on that part of the transaction, should be filed the judgment as to the rest should be affirmed, but that otherwise it would be reversed. While the court of last resort does not in its judgment make a statement of the law relating to "future" contracts in grain, its affirmance of the judgment on the condition named amounts to a clear recognition of the validity of contracts for "futures," which earlier decisions by it have made a familiar principle of our jurisprudence.

CUBAN REVOLUTION AND SPANISH TRADE.

Recent reviews of the trade of Spain indicate an apparent improvement last year, notwithstanding the rebellion in Cuba. The value of the exports was £3,244,000 greater than in 1894, and £2,000,000 greater than in 1893. Only about half of the gain over 1894 is regarded as real, because the shipment of £1,520,000 in silver coin to Porto Rico, to supply the place of Mexican dollars, "lay outside the ordinary transactions of commerce." A good deal of war material was sent to Cuba, of course, but, after making allowance for that, the exports were £1,600,000 larger than in 1894, and £400,000 heavier than in 1893. Seeing that some £640,000 less in value of textile goods was

sent to Cuba, this recovery is the more remarkable. A couple of years ago the value of Spanish exports to Cuba reached £5,117,000, which indicates what the island is worth to Spain from that point of view. Statistics for 1895 are only provisional, and do not deal with the trade by countries, so that it is impossible to discover to what extent the revolt in Cuba interfered with Spanish trade.

The loss to Spain in case of the success of the Cuban revolutionists would be great, only one item of which would be the exemption of Spanish goods from Cuban duties. The importance of this to Spain lies in the fact that, ordinarily, Spanish exports to Cuba amount to about one-fifth of the total annual exports of Spanish merchandise and products. This would indicate something more than a mere sentiment behind Spain's resolve to retain the Pearl of the Antilles.

In 1894 Spain sent goods to Cuba valued at £3,000,000 more than her importations from that island; thus the colony must have been in the habit of remitting considerable sums to Spain, and the lack of these will be likely to cause extreme inconvenience. The British consul at Barcelona says the Province of Catalonia feels most acutely the effects of the war. "Every branch of trade is suffering severely, and a financial crisis must come soon if an early change for the better does not take place." And a representative of the British Embassy at Madrid states that "the condition of Spanish trade cannot be considered favorable, despite the increase in the exports last year; the more so as much of the stuff exported could not be sold at the figures at which it was valued for statistical purposes."

Spanish imports in 1895 were valued at only £1,000,000 more than exports, while in 1894 the excess of imports was £5,000,000, and in 1893 it was £2,600,000. The total value of Spanish imports in 1895 was £1,016,000 less than in 1894, due, it is explained, wholly to the decreased consumption in Spain of foreign wheat. In 1893 Spanish imports of wheat amounted to 814,664,000 kilos, in 1894 to 421,823,000 kilos, and last year to only 262,673,000 kilos. In February, 1895, the duty on foreign grain was increased, and the effect has been to "entirely change the trend of agricultural traffic in Spain." In former times Barcelona flour mills supplied nearly all the manufacturing centers of Catalonia with the produce of foreign wheat fields; but those towns now obtain their wheat from the interior, "and the mills of Barcelona receive their grist by railway rather than by sea, though there is a big coasting trade in wheat from other Spanish ports." The railways like the change, as well as the farmers; but British shipowners suffer.

Even the London *Daily Financial News* is compelled to admit that "this raising of the Spanish duty on imported wheat" was "a rather successful piece of protectionism;" that it has helped Spanish agriculture greatly, and has assisted to reduce the large adverse trade balance which has long been so awkward an element in the economic position of Spain.

Many of the textile factories in Catalonia which depended on the trade with Cuba have been closed, or are working with fewer employees and at reduced wages, so that the prospects of the Spanish industrial classes are "far from bright." Altogether, the improvement in Spanish trade last year seems only superficial and fleeting, and unless the war in Cuba is "brought rapidly to a close, the results of the current year must be bad indeed."

SMALL GAIN IN APRIL BANK CLEARINGS.

April bank clearings, as was expected, show only a very small gain over the corresponding month a year ago. The April increase, compared with the like month a year ago, is the smallest for many months, although the general aggregate of clearings is larger than in either February or March. Total clearings at 69 cities for April aggregate $4,280,769,889, an increase over April, 1895, of nine-tenths of 1 per cent., a gain over April, 1894, of 15 per cent., but a decrease from April, 1893, of 13 per cent. The gain in March, it will be recollected, the smallest hitherto reported this year, was 2.2 per cent., while the increase in February over February, 1895, was more than 20 per cent.

BANK CLEARINGS AT 87 CITIES FOR APRIL, AT 82 CITIES FOR THE MONTH AND FOR FOUR MONTHS THIS YEAR AND LAST, AND AT 76 CITIES FOR FOUR YEARS.

The following table of percentages of increases and decreases during the first four months of the past three years will be found interesting:

	1896.	1895.	1894.	1893.
January	Inc. 4.8	Inc. 8.4	Dec. 31.9	Inc. 4.8
February	Inc. 20.3	Inc. 6.3	Dec. 36.9	Dec. 2.7
Two months	Inc. 11.7	Inc. 7.4	Dec. 34.0	Inc. 1.2
March	Inc. 2.2	Inc. 7.4	Dec. 30.7	Inc. 2.1
Three months	Inc. 8.4	Inc. 7.4	Dec. 33.0	Inc. 1.4
April	Inc. .9	Inc. 14.2	Dec. 25.0	Dec. 3.0
Four months	Inc. 6.4	Inc. 9.1	Dec. 31.0	Inc. .5

The showings made by the various groups of clearing house cities during April and the first four months of the year compare with a year ago as follows:

	Jan., 1896.	*Feb.,* 1896.	*March,* 1896.	*April,* 1896.	*Four mos.* 1896.
New Engl'd.	Dec. 2.5	Inc. 12.9	Dec. 1.5	Inc. .8	Inc. 1.8
Middle	Inc. 6.8	Inc. 25.3	Inc. 3.0	Inc. .3	Inc. 8.0
Western	Inc. .3	Inc. 4.5	Inc. 4.0	Dec. 1.7	Inc. 1.8
Northwestern	Inc. 3.7	Inc. 8.8	Inc. .2	Inc. 7.6	Inc. 5.0
Southwestern	Dec. 1.8	Inc. 9.1	Dec. 4.0	Dec. 4.0	Dec. .5
Southern	Inc. 6.2	Inc. 29.7	Inc. 11.9	Dec. 3.3	Inc. 9.9
Far-western	Inc. 13.3	Inc. 9.9	Inc. 1.1	Inc. 3.4	Inc. 6.1
Totals	Inc. 4.8	Inc. 20.3	Inc. 2.2	Inc. .9	Inc. 6.4
Canada	Inc. 1.8	Inc. 14.1	Dec. 2.5	Inc. .5	Inc. 3.0

Increases of clearings reported in April are generally smaller than those in any previous month this year, and decreases are slightly more numerous. The rather less favorable showing in March and in April have affected the four months' totals to some extent. Total clearings at 69 cities for the four months this year aggregate $17,059,514,662, a gain of 6.4 per cent. over a year ago, an increase over 1894 of 16.5 per cent., but a decrease from the first four months of 1893, a period just previous to the panic, of 20 per cent.

GRAND TRUNK'S HALF YEAR.

It is due to the present management of the Grand Trunk Railway of Canada to say that the reports they issue every six months make a very favorable impression. There is an entire absence of those glowing anticipations and quasi promises of better results in the future, which were one of the leading characteristics of the old administration, with which the corporation was weighted down for so many years, and in their stead a plain, businesslike statement of the operations and financial condition of the company is given. All of this goes to confirm the impression that its present management is devoting its best energy and technical skill to improving the physical character of the line and the development of its resources in conformity with the natural and business conditions which confront it. It might be mentioned that a matter of considerable interest to the American financial public—the receivership of the Vermont Central—is merely noted in the report of the Grand Trunk's half year ending December 31, which has just been issued. The fact is simply stated that it was found necessary to take this step for the protection of the interests of the Grand Trunk Railway, both as a creditor of the Vermont Central and on account of its valuable traffic relations with the latter company. As the report was prepared in March, and issued before the stockholders' meeting on April 9, it is supposable that the Vermont Central receivership was too recent a matter for the full and explicit treatment which might be considered desirable, assuming, of course, that what might be called diplo-

matic reasons would seem to the Grand Trunk management to justify or demand a fuller statement of the facts. For the time being, therefore, we must remain in ignorance as to the policy and intentions of the Grand Trunk with reference to the future of the Vermont Central and its leased lines.

There is little else in the report which calls for any comment. In the six months ending December 31, 1895, the gross earnings of the Grand Trunk are stated to its English stockholders to have been £1,983,-962, against £1,954,082 in the same period of 1894. The net receipts from traffic are given at £544,172 against £554,981, and the revenue, including miscellaneous receipts, is stated to have been £634,251, as compared with £643,835 in 1894. The working expenses of the half year amounted to 72.57 per cent. of the gross, compared with 71.60 per cent. in the corresponding period of 1894. There was an increase of 269,000 tons in the total amount of freight transported, equal to 6 per cent., but the rates, especially on through freight, were exceptionally low, the receipts per ton per mile falling from 0.68c. to 0.66c., which is the lowest average rate per ton per mile in any December half year in the company's history.

REGULATING LABOR IN MERCANTILE ESTABLISHMENTS.

New York state has supplemented its legislation regulating labor by an act which limits the hours of employment, and otherwise affects the condition of women and children employed in mercantile establishments. Governor Morton signed last week a bill providing that no male under sixteen years of age, and no female under twenty-one years of age, employed in any mercantile establishment in the state, shall be required to work therein more than sixty hours in any one week; nor more than ten hours in any one day, unless for the purpose of making a shorter workday on any one day of the week; and that in no case shall any person belonging to either the classes mentioned work in any mercantile establishment after 10 o'clock in the evening or before 7 o'clock in the morning of any day. This provision is not to be construed so as to apply to the employment of any person in any mercantile establishment on any Saturday of the year, except that the total number of hours of labor per week of members of the classes mentioned shall not exceed sixty hours, and none of the provisions of this section are to apply to the employment of any persons between December 15 of any year and January 1 of the year next following. This provision aims, as will be seen, to except from the operation of the law the Christmas holiday season.

The law further provides that no child under fourteen years of age shall be employed in any mercantile establishment in the state; that it shall be the duty of every person employing children to keep a register in which shall be recorded the name, birth, age and place of residence of every person employed by him under the age of sixteen years; and that it shall be unlawful for any proprietor, agent, foreman or other person in or connected with a mercantile establishment to hire or employ any child under the age of sixteen years to work therein unless there is first provided and placed on file in the office thereof a certificate, which register and certificate are to be produced for inspection on demand made by the board or department of health or health commissioner or commissioners of any city or town or incorporated village where such child is employed. The certificate required is to be a certificate from the board or department of health or health commissioner or commissioners of the city or town where such child resides, or is employed, or is about to be employed, which shall state the date and place of birth of such child, whenever possible. The law requires that seats be provided for female employees, and fixes forty-five minutes as the allowance of time for the noonday meal. Under the act mercantile establishments are construed to mean places where goods, wares or merchandise are offered for sale.

AN INCREASE IN RAILROAD CONSTRUCTION.

There seems to be every prospect that the year 1896 will be marked by a very tangible increase in the amount of railroad construction to be added to the existing mileage of the United States. For the last two years the effect of hard times upon this branch of industry was very marked. In 1895 less than 1,800 miles of new track was built, and in 1894 the amount was only 1,950 miles. Even in 1893 the aggregate footed up only 2,600 miles, against over 4,000 miles in 1891 and 1892, respectively. As the *Railway Age*, which has made an extended examination of the subject, points out, there has been a steady decrease in the number of miles of track laid each year since the wonderful year 1887, when 12,-724 miles of new road was built. As the same authority says, this decrease does not mean that the demand for railways is nearly supplied and that construction will continue to decrease. On the contrary, it points out that there is room and will be need for additions far greater than the entire present mileage of the country. We have now something over 181,000 miles of road. To equal Great Britain in its ratio of railway mileage to square miles of territory, we should have a total of nearly 500,-000 miles. To equal the abundant supply of Illinois, we must have 522,000 miles, while if Massachusetts, with its mile of railway to every four square miles of territory, be taken as the standard, the United States as a whole would eventually boast of 772,000 miles of lines.

It would seem from the highly interesting examination which the same paper has just concluded that between 30,000 and 40,000 miles of new lines are either uncompleted or projected at the present time in the United States, and that every day adds to the list of new enterprises of this character. From this mass of prospective or possible mileage it has selected a list of roads upon which construction has been commenced, or which seem to give promise of early commencement. Summarized, this list shows 205 lines, lying in 47 states and territories, and contemplating over 10,000 miles of new road. The statement is as follows:

SUMMARY OF RAILWAYS ON WHICH CONSTRUCTION HAS BEGUN OR IS PROMISED.

States.	No. lines.	Miles.	States.	No. lines.	Mil-s.
Maine	5	185	Wisconsin	4	323

Total in 47 states and territories				205	10,145

From this it will be seen that relief from the pressure of hard times and unfavorable financial conditions is having an immediate effect upon the railroad building industry. The effects of such a movement upon industry in general would be highly beneficial, and it therefore becomes a question of much interest to determine how much of this mileage for which preparations are being made will be actually undertaken, or how many new lines not included in the above total will come into existence. The questi n will probably be decided by financial conditions.

The improvement in that respect, although marked, is not such as to justify an assumption that the greater part of the entire 10,000 miles included in the tabulation can be undertaken or finished during 1896. Many legitimate enterprises of the kind will, no doubt, have to be deferred till some later time, although if the growth of financial confidence and the expansion of the investment demand is maintained at the present rate of progress, there would be no ground for surprise should the track-laying record of the current year reach an aggregate of from 2,000 to 3,000 miles, while under such conditions work would naturally be commenced upon probably as much more. During the first three months of the year about 253 miles of road was completed by twenty separate companies, and the paper from which these details are taken states that it is reasonably certain that at least 1,750 miles of additional road now actually in progress will have been finished early in the year. It is, therefore, certain that the record of 1896 in this respect will show a great improvement upon that of the past two years, although it remains to be proven whether conditions will justify an exceptionally prosperous and active season in this important phase of national development.

*INFORMATION REGARDING CURRENCY, WEALTH AND DEBT.**

The projection of the currency question into the foreground of public discussion has given rise to a marked demand for information regarding the present condition and past history of the monetary system of the United States. Efforts have been made to meet this demand from different points of view, among which, it need scarcely be said, those determined by the interests of advocacy have not been lacking. In some quarters, however, an endeavor has been made to present the needed information in a form free from the limitations imposed by the need of supporting preconceived opinions, and in such a shape that the inquirer, whatever his predilections, may feel that he is dealing with a presentation of facts made without regard to their effect upon the decision of mooted questions. A manual of this kind was given to the public last year in Muhleman's "Monetary Systems of the World," and another embodying more general features, in addition to information regarding the currency, has just been published by Mr. George B. Waldron, under the title "Handbook of Currency and Wealth."

An idea of the field covered by this little volume may be gathered from the fact that it contains a description and history of the several component elements of the monetary system of the United States, with tables relating thereto, as well as the money systems and finances of the world; the relation of gold and silver as to production, prices and wages; wealth and its ownership, including its production, distribution and consumption; also the extent of debts of all kinds; facts relative to railroads, telegraphs and telephones, strikes and lockouts, land and population, immigration and foreign born, the liquor traffic, and the last vote for President.

The volume opens with a table in which there is given for each kind of currency in use the date of first authorization; the limit of its denominations; the fact whether it is a legal tender, and to what extent; the class of dues for which it is receivable; the kinds of currency for which it is exchangeable, and the kind of money in which it is redeemable. This table, which is compiled from the currency laws of the United States, is one of the most convenient statistical presentations with which we are acquainted. A compact historical résumé prefaces a series of tables treating of the coinage of the country, the Treasury note issues, the banks and bank note circulation, the use of gold and silver in the arts, the use of credit instruments in business, statistics of the Treasury, including figures of the gold reserve; a brief review of the monetary systems of foreign countries and their finances, ratios of gold and silver, the prices of farm products, relation of wages and prices, the production and consumption of wealth, the growth and extent of trusts, the recent government bond operations, and statistics regarding failures, under which head are presented figures regarding assets and liabilities of failing traders, with numbers and percentages classified according to amount of liabilities, and statistics as to the causes of failures, taken from BRADSTREET'S. What appears to be a very carefully prepared index renders this compact little manual specially available to the busy man in search of information touching the subjects covered.

* A Handbook on Currency and Wealth, with numerous tables and diagrams. By George B. Waldron, A. M. pp. 150. New York: Funk & Wagnalls Company. 1896.

AUSTRALIAN BANK TROUBLES AGAIN.

English financial interests have been agitated of late by what is declared to be the necessity for further concessions on the part of creditors and shareholders of Australian banks in the way of extensions of time for the repayment of deposits and reduction of rates. This is said to be caused by low rates for money. This is the more surprising, because after the crash in the Australian financial world in 1893 it has understood the reconstruction then attempted would restore stability, and concessions then made would be final. Evidently they were not. It is also stated that the expected restoration of confidence after the reorganization of 1893 has not been realized.

Creditors of Australian banks, British financial interests and capitalists, are declared to assume practically this position:

When you got our money originally you showed us balance sheets and profit and loss accounts which made the security seem a very good one. Your assets, on which we relied, turned out to be unrealizable when there was a run upon you. In order to secure the good will of your business we consented, in haste, to schemes which we were told would put everything right. We fully recognize that what has happened since has upset your calculations, and we think that your idea of coming to us to ask us to help you in preserving the good will of the business is a sound idea. But as a condition of meeting your proposals we must insist on having full information, and we must be directly represented, so that we shall have somebody on this side of the world from whom we can demand

an explanation should it happen that, after all the concessions we have made, anything should again go wrong.

At the close of 1894 it was explained in the "Year Book of Australia" that Australian banking was rather more settled, although little recovery had, as yet, taken place. In the "Year Book" for 1895 it is added that, even "if the affairs of one or two of the reconstructed banks show improvement in respect to the recovery of stability following anticipation of deferred obligations, yet all the banks, without exception, have directly or indirectly suffered from the influence of adverse factors which are not peculiar to the Australian colonies, but which are world-wide in their operations. It is to be recognized, however, that the peculiar methods by which Australian banking has been conducted have intensified the effect of altered general conditions. Australasian deposits were fixed. Australasian advances were more fixed, and fixity of resources for short periods was treated as sufficient justification for fixity of loans for long periods."

Evidently, while the banks had not intended that their loans should run indefinitely, circumstances have prevented their repayment at maturity. It is also evident that the glut of money in London and elsewhere during the past year has contributed to the embarrassment of Australian banking interests at a time when they were engaged in trying to tide over the effects of a crisis. Meanwhile, the difficulty of realizing on properties in which there is no net annual profit is intensified by the low rates at which advances may be obtained. In addition, reference may be made to the failure of crops from drouth in Victoria. Yet, it must be plain to British creditors, as declared by the London *Financial News*, that it is incumbent on them to meet in a conciliatory spirit any proposition submitted for the preservation of their connection with like interests in Australia. It is a matter of congratulation that prudent counsels in this direction appear to prevail.

WHEAT PRICES IN THE UNITED STATES AND ENGLAND.

To the Editor of BRADSTREET'S:

SIR.—The serious error which pervades Mr. William E. Bear's discussion of wheat prices in your last issue, rendering his every conclusion worthless or even directly opposite to the fact, is his inattention to the difference between the units of value on which his two series of prices are based. The English prices, though stated, like ours, in cents, are throughout on a gold basis. The United States prices, derived from the reports of the Department of Agriculture, are general averages of estimates from its local correspondents, necessarily stated in terms of the currency with which the reporters were familiar at the time of reporting. They are founded for the most part on actual sales of commodity, and of course relate to the prevailing legal tender. Such are the figures the department at Washington received during the depreciation period, and such are the figures it published.

For an intelligent comparison of prices at different dates, under changing gold values of the legal-tender unit, it is essential that those prices be brought to a uniform gold basis. This reduction is made in the table below, which is Mr. Bear's table corrected. The factor by which United States farm prices are divided is the average currency value of a gold dollar for November in each of the years included, the government report being made at the end of that month. The English prices, already in gold, need no modification:

Years.	Currency value of gold dollar.	Farm prices U.S. Reported.	Farm prices U.S. In gold.	Official prices, England.	Excess in England
1862-66	160.7	151.3	94.1	139	44.9
1867-70	127.9	134.8	105.4	167	61.6
1871-74	110.9	114.7	103.4	171	67.6
1875-78	106.7	97.4	91.3	146	54.7
1879-82	100.0	103.3	103.3	134	30.7
1883-86	....	75.4	75.4	106	30.6
1887-90	....	77.2	77.2	94	16.8
1891-94	....	62.3	62.3	87	24.7
Percentage fall.					
1862-66 to 1891-94	....	....	33.8	37.4	....
1867-70 to 1891-94	....	....	40.9	48.0	....
1871-74 to 1891-94	....	....	39.7	49.1	....
1875-78 to 1891-94	....	....	31.8	40.4	....

It need only be added that when the two series of prices are made comparable, so that their real meaning can be seen, nothing is left for Mr. Bear's assertions to rest on. The inquiry would be a profitable one, however, if you could spare the space for it, why the difference in the fall of price between this country and England, whose existence is so clearly shown in the corrected table above, has not been greater; why so much of the saving ascribable to reduced cost of transportation appears to have been lost to the United States wheat grower. The cause pointed out on page 198 of a paper on "Prices of Wheat in England," in the Department of Agriculture Statistician's Report for May, 1895, "the westward progress of wheat growing in our own country," is doubtless the true one. The great bulk of the wheat during the latter years covered by this table was hauled a considerably greater distance than during the earlier years owing to this westward progress, and therefore a large reduction in mileage freights here appears as a comparatively small reduction in total freights. Very respectfully,

HENRY FARQUHAR.

Washington, D. C., April 28.

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

Under an order reported from the Committee on Rules of the House this week, the sessions until Friday were set apart for general debate on the bankruptcy bill, and to-day was directed to be devoted to consideration of the bill under the five-minute rule for amendment until the hour of 4 o'clock, when a vote on the passage of the bill is to be taken. The general debate upon the bill was opened by Mr. Henderson, of Iowa, who said that there were three lines of opinion upon the subject, as indicated in the division of time. He construed the constitutional provision giving to Congress the power to pass bankruptcy laws to devolve upon Congress the duty of passing such a law. As to the character of the law to be passed, no bankruptcy law, he said, had ever been enacted which did not, like the pending bill, contain both the voluntary and involuntary features. The committee, he said, had kept steadily in view: First—The rights of the debtor, giving him the most liberal remedies in voluntary proceedings, and in every possible way protecting those who are honest from unjust prosecution, and at all times from persecution. Second—The rights of the creditor, giving him ample protection, but leaving no cruel weapon in his hand. Third—The necessity for a law that will be as inexpensive and simple as possible in its operation. The committee sought to make this bankruptcy bill thoroughly national, adapted to all parts of the country, uniform in its operation, simple in its methods, and gave special attention to the subject of making it inexpensive in its administration, hoping thereby to frame a law that would so commend itself to the people and be so generally acceptable that it would become a permanent part of the general legislation of the country. The measure, he said, had the approval of the judgment and conscience of the members of the committee, and he hoped it would meet the approval of the members of the House and of the country. It is to be hoped that the House will respond to the demand of the country for the passage of the measure before it.

Information of some interest regarding the development of Southeast Africa has been received by the State Department from Consular Agent Andrews, at Beria. According to his report the wagon transport has been stopped for several months, owing to the scarcity of food for the oxen, caused by the swarms of locusts that have been devouring all green stuff between Beria and Salisbury. On account of the transport difficulties it has been decided to extend the railway to Umtali, which is in the Chartered Company's territory, and from there to Salisbury, to connect with the overland railway from Mafeking and Buluwayo, which is in course of construction. Another railway, now being built between Beria and Fontesvilla, will be opened for traffic next month. When this is finished the river service will be dispensed with. The telegraph line has been finished to Beria, and places that town in communication with the world via Mashonaland.

A Milwaukee dispatch, noting that the sale of the Northern Pacific Railroad was ordered in a decree signed by Judge Jenkins this week, says that the order of the court contains reservations which give any supply or labor creditors of the Northern Pacific Company, or others having like priority, the customary right to come into court at any time and apply for relief, which the court reserves for itself the right to grant. A supplemental decree orders the sale of lands west of the Missouri river, and which are held to be subject to a lien of the stockholders. The land is to be sold in parcels in North Dakota, Montana, Idaho and Washington. The total indebtedness from the issuance of bonds alone by the company is found by the decree to be $152,336,155. This, however, does not include the issuance of receivers' certificates, the collateral trust indenture bonds amounting to more than $150,000,000, and the back interest on bonds amounting to $44,051,500, which includes the general first mortgages on the Missouri and the Pend d'Oreille divisions. In addition to this, there is a large amount to which reference is made, but no specific figures are presented. The sale is to take place at the passenger depot of the Northern Pacific Railway in West Superior within sixty days. For the first parcel the bid must not be less than $10,000,000, for the second not less than $2,000,000, and for the third parcel not less than $500,000. The master must exact a deposit of cash or bonds from all bidders. The expenses of the sale and of the foreclosure proceedings are first to be paid from the proceeds of the sale of the first parcel. The balance is to be applied to the general second mortgage after the satisfaction of the prior liens, and if there is anything left, it will apply to the general third mortgage bonds. The net proceeds of the various branch-line bonds pledged for the consols are to be applied to that issue.

CURRENT BUSINESS NEWS.

Industrial.

At San Francisco the union painters at work at Hunter's Dry Dock scraping and painting the battleship Oregon struck this week because the men were being worked nine hours instead of eight, as provided by the federal statute.

A Pittsburgh dispatch says the structural iron workers, bricklayers, stonemasons and bridge builders joined the May-day movement at Pittsburgh for an advance of wages. They were to ask for $3 a day beginning May 1. The demand was to be presented to the contractors at once, and, it was believed, would be generally conceded. The horseshoers were also to join the movement, asking for a reduction in the hours of work a day from ten to nine.

The 110 striking trammers at the Quincy mine, at Houghton, Mich., who went on strike and caused suspension of production, have reconsidered their decision to remain out until their demands were granted, and returned to work. The company gave them a raise of 20c. a day.

A Chicago dispatch says a conference was held this week between the secretary of the Chicago Shipbuilding Company at South Chicago and the representatives of the strikers, but no settlement was reached. Four hundred of the 1,000 men who went out were at work at the close of the week, many of them having quit out of sympathy.

The gold production of Australia for 1895 is officially reported at 2,350,562 ounces, against 2,243,634 in 1894 and 1,389,607 in 1893. In ten years the gross income per annum for Australia in the production of gold has increased nearly $20,000,000, and the prospects favor a further increase in the production.

Union ore men employed on the Duluth, Mesaba and Northern ore docks, Duluth, have struck. They demand that only union men shall be employed.

The structural iron workers and bridge builders in Pittsburgh demanded an increase of wages May 1. The horseshoers joined the movement for a reduction of hours. "About 5,000 men were to quit Saturday (to-day) should these demands not be granted."

The Indiana soft coal miners are expected to close down, the operators having refused to grant the demand of the miners for the Ohio scale of 61c. per ton.

The *American Manufacturer* says: "It is likely that steel roads, as advocated by the Ohio road commissioner, will soon be tried in several states. According to this plan, steel rails of such a shape as to make it easy for wagons to enter or leave the track are to be laid on the country roads. The experiment will be closely watched, and, with the cheapening of manufacturing steel, may yet settle the 'good roads' question."

Arrangements have been completed for holding the first National Convention of Foundrymen in Philadelphia, May 12, 13 and 14, and "it is expected that the meeting will be the largest ever held in this country in connection with this branch of manufacturing enterprise."

Commercial.

The annual election of officers of the Maritime Exchange was held on Tuesday, and the regular ticket was elected as follows: President, Hugh Kelly; vice-president, Henry T. Knowlton; treasurer, Louis T. Romaine; directors, John A. Cormack, George Osgood Lord, W. V. Nichols, Albert Spencer, F. Whitney Doane and J. Raymond Smith; inspectors of election, C. J. Conlon, W. W. Thomas, John McNeil and Frank S. Parker; auditing committee, Jacob K. Telfair, Abiel Abbot and Albert H. Brown.

The business portion of Cripple Creek, Col., was destroyed by fire on Wednesday. Like the conflagration of Saturday last, it was the work of incendiaries. Three lives were lost, and 15 or 20 persons injured. Buildings were blown up with dynamite to stop the spread of the flames. The loss will not fall short of $2,000,000. One thousand persons are homeless.

Fourteen of the fifteen firms which manufacture shovels in the United States met at Philadelphia this week. They deny that they are about to form a trust, but admit there is to be an "understanding" among them that may lead to some stiffening of prices, and that an arrangement in the nature of an apportionment of territory, or something of a similar character, may be consummated.

Mr. Ellison reports European spinners' takings of American cotton from October 1, 1895, to April 1 this year at 4,064,000 bales, averaging 489.7 pounds, against 4,269,000 bales, averaging 497.9 pounds, in a like period in the preceding year. He reports the weekly consumption 182,000 bales of 400 pounds, against 182,000 a year ago; spinners' stocks April 1, 897,000 bales, against 1,048,000 bales April 1, 1895. Great Britain's exports of cotton goods October 1, 1895, to April 1, 1896, were 651,463,000 pounds, against 656,585,000 pounds for the like period in the previous season, with a value of $611,837,000, against $648,815,000 previous year. Egypt and India have sent Europe since September 1, 1,245,000 bales against 844,000 bales.

Governor Turney, of Tennessee, in behalf of the state, has issued invitations to President Cleveland, the Cabinet officers, the Vice-President, Speaker of the House, the Supreme Court and diplomatic corps to attend the inaugural ceremonies upon the opening of the Tennessee Centennial Exposition in June.

We sent abroad only 25,500,000 pounds of cheese during nine months ended April 1, compared with over 43,000,000 pounds in a like period in the previous season. There is no particular activity here or in Canada in the cheese business. Stocks in England, as in this country, are more moderate than a year ago, and the market abroad is in better shape.

There have been several "drives" in cotton goods at New York. One house "sold large quantities of a new dress fabric at about half the ordinary price, and several hundred cases were disposed of. Claflin & Co. offered a lot of Columbia Mills indigo blues at ½c. and ¾c. per yard below the regular price, and sold a large quantity. Brown cotton goods were more active, and some advances in sheetings were made. Other prices are expected to advance."

The *American Manufacturer* says: "Tests with acetylene for lighting railway cars are now being made in France. The night train which doubles the run between Paris and Lagny has been provided with the necessary apparatus, and the efficiency of the new lighting material is being studied by experts of the Eastern and Paris-Lyons-Mediterranean railways. The lighting effect of acetylene has proved much stronger than that of gas, the proportion being 1.5 carcels to 0.65, or 12 liters of acetylene equal to 35 liters of carburetted or enriched gas."

The first cargo of California redwood was recently sent to England, An exchange says it is strange that no one ever attempted this before, and the San Francisco *News Letter* prophesies good returns to any firm making a regular trade of it.

In 1881, says the *American Agriculturist*, "the United States exports of cheese were 148,000,000 pounds. Since that date they have been decreasing until now they are small. The following table shows the total exports (fiscal years) in the years named:

	From U. S.	From Canada.	Total.	Per ct. U. S.	Per ct. Can.
1895.....	60,448,000	155,781,000	216,229,000	27.8	72.2
1894.....	73,852,000	163,674,000	237,526,000	32.0	68.0
1893.....	81,351,000	142,312,000	223,663,000	36.4	63.6
1892.....	82,100,000	118,270,000	200,370,000	41.0	59.0
1891.....	82,134,000	106,202,000	188,336,000	45.6	54.4
1890.....	95,376,000	94,260,000	189,636,000	53.0	47.0
1889.....	84,992,000	88,535,000	173,527,000	49.9	50.1
1888.....	88,008,000	84,173,000	172,181,000	51.7	48.3
1887.....	81,256,000	73,604,000	154,860,000	54.1	45.9
1886.....	91,877,000	78,113,000	169,990,000	57.3	42.7

The new Welland Canal was opened for traffic on Tuesday.

Financial.

The following securities were sold at auction this week at New York:

$6,500	Kinderhook & Hudson Railway Company 1st mortgage gold 6 per cent. bonds, due 1909 (hypothecated)	49%
$2,000	Central City Brick & Tile Co. 1st mortgage gold 6 per cent. bonds, due 1911 (hypothecated)	40%
$3,000	Kalispell Water & Electric Co. 1st mtge gold 6 per cent. bonds, due 1912 (hypothecated)	81%
$5,000	Denver Water Storage Co. 1st mortgage bonds, on which $300 assessment has been paid, being full amount (State Trust Co. ctf. of deposit)	$400 lot
173	Shares Allentown Iron Co.	$4 lot
45	Shares Central National Bank, $100 each	123
1	Share Standard Oil Trust, $100	249½
1	Share Chicago Junction Railways & Union Stock Yards Company preferred, $100	100½
1	Share Westinghouse Air Brake Co., $50	313
2	Shares American Tobacco Co. pfd, $100 each	97¼
2	Shares National Starch Manufacturing Co. first preferred, $100 each	53¼
$2,000	Standard Gas Light Co. of New York 1st mtge 5 per cent bonds, due 1930	113
$2,000	Brooklyn Union Gas Company first mortgage 5 per cent. fifty-year gold bonds	106⅛
25	Shares Commonwealth Insurance Co., $100 each	84½
5	Shares National Park Bank, $100 each	269½
$100	Maine Central Railroad Company 7 per cent. consolidated mortgage bond, due April, 1912.	128⅛
20	Shares Fidelity Securities Co., $5 each	$5 per share
36	Shares Sioux City Traction Co., $100 each	$7 per share
3	Shares Morris & Essex Railroad Co., $50 each	163¼
2	Shares Pittsburgh, Fort Wayne & Chicago Railway Company, $100 each	168¼
$900	Brooklyn Union Gas Company, bond scrip	105¾
29	Shares Brooklyn Union Gas Company, $100 each	95
$1,000	New York Suburban Water Company 1st mortgage 5 per cent. thirty-year gold bonds, dated June 1, 1895	65½
100	Shares Maryland Coal Co. preferred, $100 each	45
400	Shares American District Telegraph Company, $100 each	25@25⅛

The amount of gold coin in use in the countries of the world is said to amount to $3,600,000,000. "About one-third of the gold mined is used for coinage purposes. The value of gold coin in the United States is $600,000,000, against $800,000,000 in France, 600,000,000 in Germany and $550,000,000 in England."

Gross	$4,431.11	$4,567.13	Dec. $145.02
Expenses and taxes	2,972.80	3,433.51	Dec. 460.71
Net	$1,458.31	$1,142.62	Inc. $315.69

The all-rail east-bound shipments of dead freight from Chicago last week were 61,899 tons, against 61,690 tons the previous week and 61,408 tons the corresponding week of the previous year.

The Kansas City, Pittsburgh & Gulf road is reported in operation from Kansas City, Mo., to Salislaw, I. T., 291 miles. A gap of about 100 miles extending to Horatio, Ark., is under construction. From Horatio to Shreveport, La., 120 miles, the line is completed and in operation. The road will be extended from Shreveport to Fort Arthur, 201 miles. The entire line from Kansas City to Fort Arthur will be 765 miles, and it is expected to be finished this year.

The Grand Rapids & Indiana foreclosure sale is announced for June 10.

Some months ago there was an exhaustive discussion by the members of the American Institute of Electrical Engineers of the question of how far electricity was likely to supplant steam on trunk railways. The opinion generally held was that, "while electricity was well adapted for the passenger traffic on trunk lines now carried on by steam, and its utilization for that purpose would make rapid headway, freight trains would, at all events for a long time to come, be more advantageously operated by steam than by electricity. William Baxter, Jr., in a recent series of articles, questions the soundness of this view. He contends that if electricity can compete with steam at all, it will be for heavy freight traffic, and shows that many of the arguments advanced to prove that electricity would be too expensive for freight traffic are specious."

Former President McLeod, of the Reading Railroad, is said to be the author of the plans to be presented by the Manhattan Railway for the proposed extension of the elevated system. "The idea of a double-decked road," says the New York correspondent of the Philadelphia *Ledger*, "is an old one, dating back to the time of Jay Gould. Russell Sage says that the talk he and George Gould had with Mayor Strong was very satisfactory and favorable to a definite and desired conclusion. A. E. Orr, chairman of the Rapid Transit Commission, says that he believes the commission will favor anything that will give New York the rapid transit it needs and facilitate anything to hasten a quick service. This is indorsed by Commissioner Inman."

The New York Produce Exchange "proposes to make a formal complaint to the Interstate Commerce Commission relative to the discrimination against this port in favor of Baltimore and Philadelphia in case the trunk-line managers do not soon give a favorable reply to its appeal for redress."

The *Railway Review* says: "The passage by the New York legislature and the signing by the governor of a bill providing for the transportation of bicycles as baggage has greatly encouraged the advocates of this plan throughout the country. With the precedent set by New York, it will probably not be difficult to obtain the passage of similar bills in other states."

Foreign.

At the annual meeting of the British Iron and Steel Institute, London, to be held May 7—an invitation to which is hereby acknowledged—the following papers are expected to be read and discussed: "The Rate of Diffusion of Carbon in Iron," Prof. W. C. Roberts-Austen, C.B., F.R.S.; "Some Alloys With Iron Carbides," J. S. de Benneville, Philadelphia; "Mond Gas as Applied to Steel Making," John H. Darby; "Hot Blast Stoves," B. J. Hall; "The Hardening of Steel," H. M. Howe, Boston; "The Introduction of Standard Methods of Analysis," Baron Hanns Jüptner von Jonstorff, Austria; "Production of Metallic Bars of Any Section by Extrusion," Perry F. Nursey; "Mr. Howe's Researches on the Hardening of Steel," F. Osmond, Paris; "The Treatment of Magnetic Iron Sand," E. Metcalf Smith, New Zealand, and "The Making of the Middle Lias Ironstone of the Midlands," E. A. Walford.

The œnotechnic station of the Italian government, No. 24 State street, New York, have began the issue of a fortnightly bulletin in order to keep the trade in the United States informed "on the conditions of the Italian wine markets, especially with regard to prices, supply and demand. Besides giving a general and faithful review of the wine trade in Italy, this bulletin will draw the attention of the merchants to those facts which bear particularly on the trade with the United States. According to the latest advices from Italy, the wine trade has taken a more active turn since the beginning of the milder season, which is more favorable to shipping operations. Greater activity is usual at this time of the year, in which the spring racking of the new wines takes place. This, however, appears to be more the case with the northern markets than with those of the southern part of the peninsula, where, owing to the deficiency of last year's vintage, prices show an increasing tendency, and holders of wine are firm in their demands. In consequence of the higher prices demanded by the growers of the south, the speculation has turned, in preference, to the wines of Piedmont and Romagna, where the vintage has been fairly good and wines can be bought at more favorable conditions."

A small volume, entitled "The Disunited States of South Africa," by Mr. R. W. Murray, London, presents views "as to the unwisdom of President Kruger's general policy, which he considers the main barrier to permanent union among the various states of South Africa, and contrasts it with the more enlightened spirit which pervades the Orange Free State." Mr. Murray believes that race feeling is of purely foreign importation, and foretells that "railways and matrimony will do away with anything of that sort amongst the whites." He suggests "a union of South Africa under which all the states should retain the regulation of their internal affairs, but should constitute a council of state, presided over by the high commissioner, to decide on questions of general policy."

The first party for the season in connection with the Self-Help Emigration Society has left Liverpool. The party consisted of 67 men and 5 boys. The greater number will settle in the Montreal district, and the rest will go to Ontario. The vessel also carries a party of 20 sent by the East End Emigration Society, and about the same number (of young women) under the care of the Society for Promoting Christian Knowledge. In the case of the Self-Help Society about 75 per cent. of the cost of passage is paid by the emigrants and their friends.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Insurance Contract—Repair—Election.

The Supreme Court of Louisiana held, in the recent case of Henderson et al. vs. Crescent Insurance Company et al., that when an insurance company under its contract elects to repair and fails to do so and the assured completes the repairs, the insurance company is liable for the costs of the repairs, without reference to the amount of the insurance; that the election to repair is a contract which can only be discharged by its performance or execution, and that defects in the material in the original building will not excuse nonperformance.

Mortgage—Note—Debt.

The Supreme Court of Louisiana held, in the recent case of Schwabacher et al. vs. Leibrook, that where several parties have obtained and recorded judgments against a common debtor, who prior to the obtaining of the judgments made a simulated sale of his property, on the return of the property to the debtor the judicial mortgages will rank according to the date of the record, and that where the debtor put a special mortgage on the property before transferring it, which was null, and this mortgage and the note evidencing the retended debt were purchased for an insignificant amount from the holder by one of the creditors pursuing the property, he could not assert the rights of an innocent holder against the other creditor who was also pursuing the property and who had attacked the mortgage.

Railroad—Shipment—Liability.

The Supreme Court of Minnesota held, in the case of Ratzer vs. Burlington, Cedar Rapids & Northern Railway Company, that where the shipper of goods consigned them to himself and received a bill of lading from the railway company accordingly, and the railway company delivered them with a proper way-bill to the next connecting railway company, who, at the shipper's request, delivered the goods to him in transit at an intermediate point, without the surrender or cancellation of the bill of lading, which he thereafter, and before the goods would have arrived at the original destination if the transit had continued, pledged in the usual course of business to an innocent pledgee for value, the latter railway company was liable to the pledgee for failure to deliver the goods at the place of destination, and was estopped from showing such intermediate delivery to the shipper.

Sale of Liquor—Druggist.

In Kentucky the Court of Appeals has rendered a decision (Lindsay vs. The Commonwealth) to the effect that license to sell liquor is not necessary in order to authorize one who is both a physician and druggist to prescribe and sell liquor as a medicine, nor is a written prescription necessary; that therefore, upon the trial of appellant for the offense of selling liquor without a license, the court erred in excluding testimony tending to show that as a physician and druggist he had prescribed and sold the liquor in question as a medicine; that a druggist need not have a license to sell liquor in order to authorize him to fill the prescription of a physician, or his own prescription, in which whisky is combined with other ingredients, provided he acts in good faith, and that the fact that one has had a license to sell liquor which he has forfeited does not deprive him of the right of subsequently carrying on the business of a druggist and selling liquor as such for medical purposes in accordance with the law.

Partnership—Insolvency—Creditors.

The Supreme Court of Georgia held, in the recent case of Fulton et al. vs. Gibian et al., that where an insolvent partnership executed and delivered to several of its creditors mortgages upon its assets, and also executed and delivered to these and other creditors, as collateral security for their claims, an assignment of the choses in action belonging to the partnership, these mortgages and the latter instrument, whether taken singly or collectively, did not constitute such an assignment as rendered the Georgia assignment acts of 1881 and 1885 applicable, there being nothing in any of these instruments creating a trust in favor of any one, and the only persons deriving any benefit therefrom being those to whom the instruments were given. The court said that it made no difference that the assignment of the choses in action provided that certain of the creditors therein named should be first paid out of the proceeds from the collection of the papers assigned, and that the balance of such proceeds should then be applied pro rata to the claims of the other creditors mentioned in the instrument, the assignment being directly to all these creditors of both classes, and not charging any of them with any duty of collecting for the others, or imposing upon any of the assignees a trust of any kind.

Sealing Contract Decision.

Judge Wallace, of the United States Circuit Court at New York, has rendered a decision in one of the suits brought by the United States against the North American Commercial Company. In this decision he holds, that, under the contract and the statutes, the Secretary of the Treasury has the right to fix the number of seals to be taken annually, without making any abatement of the rent of $60,000, the revenue tax of $2 per skin, or the $7.62 bonus for each skin. In the year 1893, however, the decision holds, the government was guilty of breach of contract in arbitrarily reducing the number of seals to be taken, as at that time the modus vivendi in connection with the Behring sea controversy between the United States and England was pending. But as the company took the seals in spite of the breach of contract, Judge Wallace holds that it must pay the United States a lump sum of $94,687.50 for that year. At the same time he decides the United States is liable to suit in the Court of Claims for $140,000 by reason of the breach of contract in 1893. Continuing, the decision says, however, that for the years ending April 1, 1895, and April 1, 1896, the company must pay the full rental of $60,000 per annum, together with the $2 tax and the $7.62 bonus for each skin, without regard to any reduction in the seal catch which may be ordered by the Secretary of the Treasury.

Creditor—Assignment—Insolvency.

The Supreme Court of Minnesota held, in the recent case of The Swedish National Bank of Minneapolis vs. Davis, that under the state insolvency law, the creditor, before he has exhausted his security or surrendered it to the assignee, is entitled to file his secured claim and have the amount and validity of the same determined by the assignee or the court on appeal, but he is not entitled to share in the distribution of the insolvent estate until he has so exhausted or surrendered his security; that where a creditor held as collateral security negotiable notes made by one third party and indorsed by another, obtained judgment thereon against the maker at his place of residence in another state, issued execution which was returned no property found, and then sold the judgment at public auction, but never had any power of sale from the insolvent pledgee, the sale was unauthorized and not a proper way to realize on the security; and that where it appeared that the collateral security was wholly uncollectable and yet of some considerable prospective value, the court in the insolvency proceeding might, as a condition on which it would allow the creditor to share in the distribution on the balance of his claim, allow him under proper restrictions to sell the collateral judgment instead of surrendering the security to the assignee, and that the court might also on proper showing after the sale ratify it, and allow the creditor to share in the distribution.

Civil Service—Veterans' Preference.

The Supreme Judicial Court of Massachusetts held, in the recent case of Brown vs. Russell et al., that the legislature cannot constitutionally provide that certain public offices and employments which it has created shall be filled by veterans in preferment to all other persons, whether the veterans are or are not found or thought to be actually qualified to perform the duties of the offices and employments by some impartial and competent officer or board charged with some public duty in making the appointments. The court said: "The principal question of law in this case, broadly stated, is, therefore, as follows: Can the legislature constitutionally provide that certain public offices and employments which it has created shall be filled by veterans in preferment to all other persons, whether the veterans are or are not found or thought to be actually qualified to perform the duties of the offices and employments by some impartial and competent officer or board charged with some public duty in making the appointments? If such legislation is not constitutional as regards public offices, the question may incidentally arise whether a distinction can be made between public offices and employments by the public which are not offices? Public offices are created for the purpose of effecting the ends for which government has been instituted, which are the common good, and not the profit, honor or private interest of any one man, family or class of men. In our form of government it is fundamental that public offices are a public trust, and that the persons to be appointed should be selected solely with a view to the public welfare."

BUSINESS NOTES.

Lumber Trade in Colorado.

The *Mississippi Valley Lumberman* says: "There is one oasis in the desert of quiet trade in lumber this spring, and that is Colorado. The development of the great gold-mining properties at Cripple Creek and other points has caused an increased demand for lumber and timbers, not only for the mines themselves, but for the settlements that are being built up about them. Oregon pine from Portland and yellow pine from Texas, which comes in over the Union Pacific, divide the honors with one another, although more or less white pine from Minnesota and Wisconsin is shipped to Denver and Cripple Creek."

British Columbian Gold.

In connection with Herr Schmeisser's report on the Western Australian goldfields, "Mr. Molyneux St. John writes calling attention to the position of British Columbia as a gold-producing country, 'whose richness in precious metals is supplemented by the advantage of the ore, as well as the pure gold, being procurable usually at a much less cost than in any other parts of the world.' There are many old miners who believe that it will prove to be the richest mineral country in the world. Since the first rush of Californian explorers in 1859, over $55,000,000 (£11,000,000) have been taken out of the country, without reckoning the gold dust and nuggets exported by the host of Chinamen who are constantly at surface work, but who do not report their results."

"United States of South Africa."

The Philadelphia *Ledger* says: "Probably it will make little difference in the end to the several colonies in South Africa whether they are under British or German domination; but the tone of the German press indicates the possibilty of a struggle for them between the two great powers. The impending danger should have the effect of stimulating the still infant movement for the formation of the 'United States of South Africa,' with complete autonomy and perfect independence from foreign dominations of every sort. It may not be possible to accomplish this desirable work; but if it is not done, South Africa will almost certainly be divided into British and German states, with probably a great deal of clashing before the division lines are permanently established."

British Steel Rail Trade.

The London *Iron and Steel Trades Review* says: "The steel rail trade does not appear to be in a good condition. It is well known that there is at present a conference or syndicate of manufacturers which practically determines what the prices taken shall be. The nominal price fixed by this organization is £4 15s.—at least it is given at this figure in American and continental journals. Now it would be perfectly reasonable to both quote and insist upon this price if it were usually received, but as it is not so the maintenance of nominal high prices has an inevitable tendency to drive orders away. In other words, rail consumers will see that competitive countries appear to sell rails more cheaply than our own, and will issue their orders accordingly. It is a deplorable commentary on this state of affairs that the total export of steel rails from the United Kingdom for the week ending April 4 was only 102 tons. This is at the rate of 5,304 tons of rails for the whole year."

Higher Prices for Rosin.

The *Oil, Paint and Drug Reporter* says: "Within the past two weeks the ordinary grades of rosin have advanced to the highest point known for many years, if, indeed, the prices have ever been so high as they are at present. The trade has been prepared for this appreciation in values, and it has occasioned no surprise, because the course of the market on these grades has been steadily upward for nearly a year. The chief interest in the situation, aside from the enhanced value of these particular grades, lies in the fact that never before in the history of the business have the quotations on all qualities of rosin ranged so closely together. While the dark grades have gradually advanced, the pale rosins have declined, under a depression in the demand, and the result is seen in the existing slight difference in quotable values. The prevailing conditions in the market for common rosin are due almost wholly to the extraordinary consumption of these qualities by European manufacturers."

British India Trade in 1894-95.

The statement of the trade of British India for 1894–95 shows that the imports were Rx.79,726,000, against Rx.92,382,000 in 1893–94 and Rx.90,954,000 in 1890–91. The exports from India were Rx.116,973,000, against Rx.110,472,000 in 1893–94 and Rx.102,208,000 in 1890–91. "The decline in imports was chiefly in silver and gold. Most of the increase in exports came under the same heading, and there was a heavy decline in cotton and oil seeds. It is noted that the proportion of India's cotton taken by the United Kingdom fell in seven years from 40 to 10 per cent., and of this latter amount half was reshipped to the continent. The European continent and Japan are the chief markets for Indian cotton. The report states that the tea trade was exceedingly prosperous in 1894–95, and that rice and opium were also profitable. The trade of Northwest India with Turkistan and Persia has been killed by Russia's ingenious arrangements, aided, no doubt unintentionally, by the unwise fiscal policy of Afghanistan."

Calcutta Competing with Dundee.

The large exports of bags to the United Kingdom continues, and the Dundee *Advertiser* thinks "the time is approaching when Dundee will find it necessary to retire from competition with Calcutta in the line of jute manufacture. There are other lines, however, in which the manufacture of that article can be carried on by Dundee without fear of effective competition from Calcutta, and perhaps those who anticipate the extinction of the manufacturing industry in Dundee as a result of Calcutta competition in the supply of gunny bags will find reason to believe that they have been rash. Noticeable as is the increase in the export of bags, that of jute cloth is even more remarkable. In five years it has risen from less than 30,000,000 yards to over 103,000,000 yards. About four-fifths of this cloth is shipped to the United States. The distribution of this increasingly important trade last year was:

	Yards.
United States	80,247,694
United Kingdom	15,693,708
China	3,087,550
Australia	736,270
Other countries	3,351,505

British View of Loss in Cuba.

The London *Financial News* says: "Consul-General Gollan, of Havana, gives a pitiable picture of the mischief wrought in Cuba by the rebels. Great areas of sugar cane have been burned, and the planters are afraid to grind what has survived, owing to threats that if they do their factories and machinery will be blown up. In place of an estimated production of 1,000,000 tons of sugar only 250,000 tons are now expected to be produced in the season of 1895–96. The 1894–95 crop was saved, and amounted to 1,004,264 tons, against 1,054,214 tons for the season before. The tobacco trade was also good last year, nearly 24,500,000 more cigars being exported than in 1894; but the crop this year is believed to have suffered great damage at the hands of the rebels. The paralysis of the import trade is complete, credit is at an end, and stagnation is universal. The railways of the island—largely owned by English investors—have not escaped, and not only is traffic practically suspended, but the lines themselves have been badly abused. The vice-consuls throughout Cuba confirm Mr. Gollan's statements, and one of them points out that the rebels have been largely reinforced by those whose means of livelihood they destroyed, the choice being between starvation and making a living by plunder."

The London Shoe and Leather Fair.

The London *Times* says that the shoe and leather fair at Agricultural Hall "includes exhibits from a number of American and foreign houses. The stand of the Goodyear Shoe Machinery Company has been brought from America and erected at a cost of £3,000. The leading feature of the exhibition, however, is a model boot factory, in which boots are made throughout and sold in the building. The machinery and the methods here shown are for the most part American. Mr. A. Lafone, M. P., presiding at the inaugural luncheon on Saturday, said that when he entered the business it took three years for the hide of a bullock to be converted into leather fit for shoemaking, but now it was possible for a bullock to be walking about on a Saturday and for its hide to be good, serviceable leather on the following Tuesday. Because of our primitive methods, trade had slipped away into other hands; but all that was past now, and the English tanner was able to produce cheap and fancy leather, and good leather as well. Still America was ahead of us in the matter of the cheaper production of the manufactured article, the reason being that the newest labor-saving machinery was used. American bullocks were brought to this country to be killed and their hides were shipped back to America to be made into boots for the English market."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

There is relatively less improvement in general trade this week, the present partaking of a between-seasons character. Wholesale merchants in staple lines in many instances look ahead with confidence to the autumn, and in such departments as agricultural implements, building materials and hardware there is reported a moderate revival in demand.

More favorable reports are received from Pittsburgh, where merchants have had the largest week's trade thus far this season; Buffalo, where the feeling is one of more confidence, owing to increased activity in distribution of merchandise, and from Atlanta and New Orleans, where request in wholesale lines is more active. At Providence there is a slight increase in trade, but manufacturing interests report no improvement. At Baltimore wholesalers announce only a fair business, and that interior dealers have not disposed of stocks as rapidly as anticipated. The movement of goods from Galveston is not active, but, in view of the large Texas acreage of cotton, more confidence is felt that fall trade will meet expectations. St. Louis houses find only a moderate improvement in demand, but report taking a number of orders for fall delivery. The volume of business at Kansas City is not as large as last week, and the like is true at St. Paul, where depression has followed continuous rains. Meanwhile, agricultural interests in Kentucky complain of lack of rain, which reflects itself in wholesale trade. Damage by frost to California grape and peach crops amounts to about 30 per cent. Shipments of merchandise from San Francisco to Central America continue heavy, and stress is laid on the statement that a Tacoma factory has received an order for 400 car loads of woodenware for delivery at Missouri river points. Salesmen traveling from Chicago report interior buyers purchasing with increased conservatism, and no decided improvement in trade. Slight increases in distribution are reported in only a few lines.

Bullish speculation in the New York stock market is checked by the renewal of gold shipments and the halt in the London market, caused by events in South Africa. Declines are moderate, and traders, though expecting reaction, act cautiously on the bear side. Public interest is, however, suspended, and quotations are the result of professional activity. The rapid progress of the Northern Pacific reorganization is a bull factor. London has taken little or no interest in the market. Foreign exchange tends to harden on the easing of the market and decreased demand for sterling loans. Gold shipments, contrary to expectation, are not large, $1,450,000 being taken for export to-day. The demand for bills is narrow, and selling against these gold exports depresses demand sterling about ¼c.—to 4 88¾.

Exports of wheat (wheat flour included as wheat) from both coasts of the United States this week are smaller than last week, amounting to 1,260,000 bushels, against 1,286,000 bushels last week, and totals between two and a half and three millions bushels each in corresponding weeks in three preceding years. In the like week in 1892 the total was 3,951,000 bushels.

There is an unexpectedly small number of strikes at this season. In iron and steel there are advances in prices for special grades of pig iron, due to the output of Lake Superior ores, required for their production, having been practically taken up by a few interests. The so-called steel trust is reported extending its territory. Quotations for southern pig have been cut, as are those for the few sales of Bessemer pig and billets made by middlemen. In addition to changes in prices of iron and steel, higher quotations are announced for coffee, cotton, petroleum and anthracite coal, while print cloths and lumber are practically unchanged Copper is easier, and wool has been sold at concessions, manufacturers preferring not to buy large lots at nominal prices. Cotton goods are depressed, notwithstanding the strength of cotton. The most encouraging feature of the woolen goods market, from the point of view of the domestic mills, is the higher cost of foreign woolens. Considerable men's woolen wear machinery remains idle. Lower prices are noted for wheat flour, wheat, corn, oats, pork, lard and sugar. The reaction in quotations for shoes has brought prices down to the level of 1894, at which the factories are fairly busy, and have rather more confidence.

Total bank clearings amount to $982,000,000 this week, a decrease from last week of not quite 3 per cent., and a falling off as compared with the corresponding week last year of 10 per cent. This week's bank clearings are 3 per cent. larger than for the corresponding week of 1894, but 28 per cent. smaller than the corresponding period 1893, and 23 per cent. less than in the like portion of 1892.

April bank clearings reflect continued quiet in business and speculation, the gain being only nine-tenths of 1 per cent. over April, 1895. Total clearings at 69 cities aggregate $4,280,769,889 for April, an increase over April, 1894, of 15 per cent., but a decrease from April, 1893, just before the panic, of 13 per cent. For four months clearings aggregate $17,059,514,662 this year, an increase over last year of 6.4 per cent., a gain over 1894 of 16.5 per cent., but a decrease from the large totals of 1893 of 20 per cent.

Weekly totals of business failures throughout the United States, while averaging fewer than in weeks during the first quarter of the year, still attract attention. The total number reported is 254 this week, against 240 last week, 206 in the last week of April, 1895, 179 in 1894, and as compared with 248 in the corresponding week of 1893. Business failures in the Canadian Dominion number 26 this week, against 37 last week, 36 in the corresponding week one year ago, 33 two years ago, and 30 three years ago.

Better weather, the subsidence of floods and the opening of navigation have stimulated sales in seasonable lines of merchandise at Montreal. At Quebec city there is a moderate improvement in business, following better roads, and it is announced that the damage from floods is less than expected. General trade at Toronto remains quiet, but the outlook is not entirely satisfactory, although dealers display increased confidence. Halifax reports the weather unfavorable and general trade slow. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $16,601,000 this week, against $17,725,000 last week, as compared with $18,561,000 in the week one year ago, and with $17,404,000 in the corresponding week of 1894.

FINANCIAL.

The Money Market.

The New York loan market has been dull and presents very slight changes. The principal feature continues to be the increased demand for mercantile paper and the ready absorption of all offerings of an acceptable character, which, it may be noted, are by no means plentiful. This condition points to the continued accumulation of funds and the return of considerable amounts from the interior. Rates for best named paper and indorsed bills receivable are now upon the basis of 4@5 per cent., and while there is no demand for inferior grades, they seem to be receiving attention. Time money has been very dull until the close of the week, when a little better demand showed itself. The supply is much in excess of current requirements, and neither in this department nor in commercial paper was any appreciable effect produced by the news that the Treasury had called upon the banks with which a portion of the proceeds of the recent bond issue had been suffered to remain on special deposit for another percentage of that fund. Rates are quoted at 3@3½ per cent. for thirty to ninety days and 3½@4 per cent. for longer periods. Call money on the Stock Exchange has ranged between 2 and 3 per cent., the bulk of the week's business and renewals being at about 2½ per cent.

The New York Banks.

The only feature of importance in the bank statement issued by the Clearing House last Saturday was the reflection of the large current receipts of money from the interior. This appeared in the increase of over $3,350,000 in the total reserves. There was a further increase of over $1,000,000 in loans and a gain of $3,250,000 in deposits, the surplus reserve increasing to the extent of $2,539,000. The figures of the statement compare as follows with those of the preceding week:

	Apr. 18, '96.	Apr. 25, '96.	Changes.
Loans	$466,219,800	$467,282,700	Inc. $1,062,900
Specie	58,629,400	59,002,700	Inc. 373,200
Legal tenders	80,524,200	83,504,200	Inc. 2,980,000
Deposits	484,057,600	487,312,500	Inc. 3,255,500
Circulation	14,351,900	14,317,400	Dec. 34,500
Total reserve	139,153,600	142,506,800	Inc. 3,353,200
Reserve required	121,014,250	121,828,125	Inc. 813,875
Surplus reserve	18,139,350	20,678,675	Inc. 2,539,325

At the corresponding period last year the surplus reserve was $25,270,625, against $83,417,950 in 1894.

The Boston Banks.

	Apr. 25, '96.	Apr. 18, '96.	Changes.

Silver.

The silver markets this week have been featureless, but strong, on a slight increase in the eastern demand and somewhat smaller supplies in the London market. New York quotations followed those in London very closely, a portion of the earlier advance being lost toward the close of the week.

SILVER PRICES.

	Apr. 25.	Apr. 27.	Apr. 28.	Apr. 29.	Apr. 30.	May 1.
London	31d.	31 1/16d.	31 3-16d.	31 3-16d.	31 3-16d.	31 1-16d.
N. Y.	68c.	68¼c.	68¾c.	68⅝c.	68⅝c.	68¼c.

Foreign Exchange.

Increasing firmness was displayed in the exchange market during the week, in spite of the fact that inquiry has been on a restricted scale, and that the dullness amounted at times to complete stagnation. Commercial bills were, however, in very poor supply, and the check to the stock market suspended offerings on account of foreign purchases of securities. In addition to this, the increased ease of money made the lending of foreign capital, which had been in progress for some weeks, more difficult, and deprived the exchange market of relief from that source. Another circumstance of some importance was the decline in the rate for London exchange at Paris, which, as usual in such cases, tended to reduce the gold-shipping point, and to facilitate triangular arrangements of that kind in which specie would be shipped from here to Paris. Posted rates were advanced ½c. for both classes on Monday, when the figures were marked up to 4.88½@4.89½, and on Wednesday demand sterling was again put up to 4.90. Actual business in demand sterling underwent a steady hardening in accompaniment to these changes, advancing from 4.88½ on last Saturday to 4.89 on Wednesday. At these figures gold shipments were considered inevitable, and estimates were made that something like $2,000,000 to $3,000,000 would go out on Saturday. The weaker tone of the exchange market on Thursday under offers of gold bills caused these estimates to be revised, and actual shipments were restricted to $1,450,000, rates declining under the pressure of gold bills to 4.88¾ on demand.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

April 25.	April 27.	April 28.	April 29.	April 30.	May 1.
4.88 @ 4.89	4.88½ @ 4.89½	4.88½ @ 4.89½	4.88½ @ 4.90	4.88½ @ 4.90	4.88½ @ 4.90

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.88½ @ 4.88¾	4.88¾ @ 4.88¾	4.88¾ @ 4.89	4.89 @ 4.89	4.88¾ @ 4.89	4.88¾ @ 4.89

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87½ @ 4.87¾	4.87¾ @ 4.87¾	4.87¾ @ 4.87¾	4.87¾ @ 4.88	4.87¾ @ 4.88	4.87¾ @ 4.87¾

Actual business on Friday in other classes of bills was quoted as follows: Cables, 4.89@4.89¼; commercial bills, 4.87@4.87¼; francs, 5.16¼@5.14¾; reichsmarks, 95 11/16@95¾.

The Bank of England discount rate remains unchanged at 2 per cent. The bank this week lost £246,173 in specie, and its proportion of reserve is 58.68 per cent., against 60.06 per cent. last week. In the London open market call money is firmer at ¾@1 per cent., and discount is up to ⅞@1 per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending April 24, 1896:

	1896.	1895.
Dry goods	$1,714,399	$2,583,762
General merchandise	7,183,798	7,065,679
Totals for the week	$8,898,197	$9,649,441
Previously reported	161,020,119	165,465,599
Since January 1	$169,918,316	$175,115,040

The exports (exclusive of specie) from New York to foreign ports for the week ending April 28 were $157,811 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,785,331	$6,742,755
Previously reported	120,863,238	111,385,414
Since January 1	$128,648,569	$118,128,169

THE STOCK MARKETS.

The New York Stock Market.

Dullness and reactionary tendencies have this week taken the place of the more active trading and advancing prices. The influences which were responsible for the change were chiefly, the check which events in the Transvaal have given to the bullish speculation at London, and the advance of exchange rates here and the fear of gold exports it produced. Another circumstance of some weight was reports from the northwest indicating that the wheat acreage may be restricted and the tonnage of the grain-carrying railroads correspondingly reduced. London was not a large seller of our market, and "Americans" were only slightly depressed by the news of the death sentence imposed on the leaders of the Johannesburg emeute, and the natural fear of serious complications it aroused. The foreign quotations for our securities showed, indeed, a further tendency to appreciate when the commutation of the sentence was announced, and the London market was released from the tension which they had created. At the same time the expansion which had been noted in the speculative movement has been arrested, and the inaction which now reigns over all departments of the London stock market has deprived Wall street of either actual or sentimental support from that quarter. The increase of public buying which had been noted for the past two weeks was checked, and, while no general liquidation ensued, there was considerable taking of profits and closing out of long accounts. The bull pools and manipulators would seem to have accepted the situation as one which offered little or no chance for a further display of their activity, and sentiment among the active traders changed from a bullish to a bearish character. Some street selling was accordingly indulged in, though pressure of this kind was, on the whole, light, and the professionals manifested a tendency to cover on slight provocation. The situation in exchange, resulting in the shipment of $1,450,000 gold, was also provocative of speculative hesitation, and had considerable effect in checking support and depriving the market of buying power, so that the "street," on the whole, seemed inclined to await reaction, if not to work actively for it. On Friday, however, the tone was on the whole firm, in spite of a continuance of these tendencies in some quarters.

The principal speculative feature of the week was Sugar. The stock on last Saturday recovered sharply from the drop which was occasioned on the day before by the passage of the anti-trust bill by the New York legislature. Short covering carried the price up from 121⅞ to 125¾, but its action since then has been of a character to raise doubts as to the intentions of the inside pool, which was supposed to be responsible for the recent advance. Doubts have been cast upon the possibility of an extra dividend, and the declining tendencies of raw sugar are considered bear factors on the stock. There has accordingly been irregular activity in it, the price declining to 122½, though the presence of a considerable short interest in it affords opportunity for a manipulation, the outcome of which is difficult to see. Chicago Gas was not active, but displayed strength on reports that arrangements for the payment of the long-delayed dividend have been practically perfected. Tobacco was not a feature, in spite of the fact that the chancellor of New Jersey has dismissed the application for an injunction against the scrip dividend.

In the railroad share list the declines were general, though not especially important in any case. The extent of the movement may, indeed, be measured by the downward course of St. Paul, 79⅛ to 78¼, and by Burlington, from 82¼ to 80. Manhattan was irregular, moving from 109½ to 111½, on the reports of a plan for double-decking the structure in conjunction with the city, but it afterwards receded to 105½ and rallied to 109¼. Missouri Pacific attracted a little attention and was in receipt of support, but, nevertheless, fell from 29¼ to 27½. The granting of the decree of foreclosure in the Northern Pacific case insures a sale of the property within sixty days, and promises to make the reorganization one of the quickest arrangements of the kind on record. The stock was correspondingly firm, and all classes of the company's securities felt the influence. The similar action of the court in the case of Reading was also effective in giving a firmer tone to that company's stock and bonds, while reports as to the condition of the anthracite coal trade continue to be favorable.

Boston Stock Market.

The market has shown rather more activity, but values are easier. Atchison has attracted little attention and closes ¾ lower, with Chicago, Burlington & Quincy down 1⅜ points. New York, New Haven & Hartford Railroad has declined 3⅞, with West End Railroad ½ point higher. Boston & Montana closes 1⅝ points lower. Sugar has had an active business, but the close shows a loss on the week of 1⅜ points. Bay State Gas shows more activity at the close, and is 1⅜ higher.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending Price Apr. 30, 1896.	Price Apr. 23, 1896.	Sales Apr. 30, 1896.	Sales Apr. 23, 1896.

Total number shares unlisted				72,979

General Mention.

The reorganization committee of the Green Bay, Winona & St. Paul Railroad, John I. Waterbury, chairman, give a final notice to holders of income bonds, preferred and common stock, that the sale of the property will take place on May 12, and that none of the aforementioned securities will be received on deposit under the plan after May 11, up to which date they will be received upon payment of the assessment fixed and a penalty of one-quarter of 1 per cent.

Messrs. Winslow, Lanier & Co. will pay dividends on a number of securities, list of which will be found in another column.

NO MARKED GAINS

IN THE DISTRIBUTION OF GENERAL MERCHANDISE THROUGHOUT THE COUNTRY. MANUFACTURING INDUSTRIES AWAITING REVIVAL OF DEMAND.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, May 1.—The general movement in merchandise continues quiet, with operations moderate in all departments. There is a light call for supplies to meet immediate necessities, but the absence of speculative features is marked. The money market is quiet, with no great surplus, but the demand for accommodation is light. Very little new paper is making. The boot and shoe trade is quiet, although the factories are fairly busy making up orders. Prices have been worked down to about the basis ruling in 1894, and this gives buyers confidence, but at the same time they are disposed to order very conservatively. Leather is quiet, and prices have been forced further down on some varieties. Hides are dull, but prices are held steady. Trade in iron and steel is quiet, but prices are steady. Lumber is quiet. Coal is in light demand.

Providence, May 1.—Manufacturing industries in all lines, especially that of manufacturing jewelers and woolen goods, remain quiet. There is a slight improvement in the general wholesale business.

Philadelphia, May 1.—Wool continues dull, with prices in buyers' favor. Very little doing in dry goods. Leather and morocco are in liberal supply, but demand is moderate. Drugs, paints and glass are not very active. Demand for sugar is light, those holding stock making no effort to sell, anticipating a higher market. Some little improvement in lumber, but prices are shaded to secure orders. Tobacco is dull, with few sales of domestic goods. Sumatra leaf rules low. Holders of Havana are very firm, looking for continued advance in prices.

Pittsburgh, May 1.—The volume of jobbing business this week is the largest of any week during the season. Prices are quoted firm on all staple lines, and a fair margin is being realized. Some improvement is noted in country collections, and the outlook in general is promising. The iron market, contrary to expectations, has been dull, but prices are firm and unchanged. Few sales are reported, but dealers in general look for an improvement in the near future.

Buffalo, May 1.—Some increased activity is noted in general business, and a better feeling prevails. The demand for money is good. Many still complain of collections.

Baltimore, May 1.—Trade is only fair, "filling-in" orders making up the bulk of the business. It is apparent that dealers have not disposed of stocks as fully as anticipated. Collections are fair.

West and Northwest.

Cleveland, May 1.—Trade continues to move along conservative lines without material change. Collections have not materially improved.

Cincinnati, May 1.—Merchandising is inactive; market weaker.

Chicago, May 1.—There has been no decided improvement in the wholesale trade during the week. A few lines of dry goods are receiving more attention and sales have increased, but, taking them all, the volume of business is not large, and is not above the average of the season. Buyers in the interior are disposed to go slow, and send in small mail orders. Increased sales of light hardware are noted, and prices on shovels and spades are up 25 per cent. Bar iron is moving well, but inquiries for steel rails, billets and pig iron are lighter. Manufacturers claim to be maintaining former prices, and say that their sales so far this year warrant them in doing it. Tanners continue to report good sales of leather, but prices are irregular. Hides are firmer, with larger sales. Lumber fairly active, but the 10c. rate in force from Minneapolis to Springfield, Ill., gives northern dealers a chance to undersell Chicago. Other building materials are fairly active and prices are low. Produce trade is fair. Butter has advanced and eggs and potatoes declined. Wool receipts, 634,345 pounds. Money easy, but demand active. Packers have arranged for large loans, and the general inquiry is increasing. Collections are fair, and with some houses show an improvement.

Detroit, May 1.—The movement of general merchandise continues fair in volume. In manufacturing lines a fair business is doing. Collections are, however, still reported unsatisfactory.

Louisville, May 1.—Trade in general is less active this week, and a quiet tone prevails. Country collections are only fair. The marked deficit in the rainfall for the month is beginning to seriously affect the outlook.

St. Louis, May 1.—The movement of seasonable merchandise continues to show fair improvement, and, while orders are mainly for filling-in purposes, travelers are doing some business for early fall delivery. Boot and shoe factories continue busy, especially on tan goods, and are buying leather in increased amounts. The harness trade shows signs of revival, supplies being purchased with more freedom. Hides firmer, and more inquiries are made. Trade in pig iron is quiet, the larger consumers having covered their wants several months ahead. Receipts of new wool are increasing, and conditions fair. Iron and steel bars, black and galvanized sheets, are higher; tinplates have advanced owing to the higher cost of raw material.

Kansas City, May 1.—Trade in all lines this week is not so heavy as in the week previous. Collections are fair.

Milwaukee, May 1.—A gradual improvement is reported in the volume and tone of trade generally. Collections are rather slow.

St. Paul, May 1.—Almost continuous rains throughout the week have had a depressing effect on trade, which shows a considerable falling off as compared with a week ago. Collections are in sympathy with trade.

Omaha, May 1.—Filling-in orders for staples in dry goods, boots and shoes and clothing maintain activity in these lines. Country produce is a drug on the market. Collections are fair.

Sioux Falls, May 1.—General trade is quiet. Collections are very fair. Farmers are busy, contending with much wet weather.

Southern Cities.

Charleston, May 1.—A slight improvement is noted in retail trade. Wholesalers in dry goods, boots and shoes report business quiet. Trade is dull in wholesale groceries.

Savannah, May 1.—General trade is dull; collections slow. A noticeable increase is shown in receipts and shipments of spirits and rosin.

Atlanta, May 1.—Trade in general seems improved. Collections are good.

Augusta, May 1.—Dry goods and shoe trade in wholesale lines are reported slightly improved, but other business remains unchanged.

Jacksonville, May 1.—No change is noted from last week.

Birmingham, May 1.—Some business is doing; about the usual volume for the season.

Chattanooga, May 1.—There is no change in business. The general feeling as to the future continues to be good.

Memphis, May 1.—General trade continues fair. Collections are fair.

Nashville, May 1.—The usual between-seasons quiet prevails. Dry goods and shoe drummers will soon start out. Calculations for fall trade are favorable. Retail trade, city, continues with some life. Country collections are not complained of.

New Orleans, May 1.—Some improvement is noted in general jobbing lines. Trading in cotton is restricted. The sugar market is easier; rice dull. The demand for loans is seasonable.

Galveston, May 1.—Trade generally shows some improvement, though is unusually dull for this season. Wholesalers anticipate a large fall trade, based upon reports from the interior of a large cotton acreage being planted. Collections are dull and money matters tight generally.

Pacific Coast.

San Francisco, May 1.—Commercial lines are generally quiet. Produce dull. Freights firm. Heavy merchandise shipments have been made to Central America. There have been recent frosts throughout California, and the damage is estimated at at least 25 to 30 per cent. of the usual fruit crop. The loss is particularly in grapes, affecting wines and raisins and clingstone peaches.

Portland, May 1.—The railroad between Portland and Astoria, Ore., is now an assured undertaking, and many persons are expected to find employment thereon as soon as the contracts are let. Trade in general continues quiet, especially in clothing, millinery, and those lines which depend upon settled weather. Collections are fair.

Tacoma, May 1.—Mills are reported short of wheat, and feed prices are advancing. Local factory has received orders for 400 car loads of woodenware from Missouri river points. Exports and imports for April show a slight increase over March. For the first four months of the year exports show over 30 per cent. increase over the same period last year, and imports 40 per cent. decrease.

Seattle, May 1.—Trade is somewhat better. Extra large shipments of provisions are being made to Alaska and south. Contracts made for three cargoes for Central America.

Canada.

Toronto, May 1.—Wholesale trade is quiet and without special features. The outlook is not considered very satisfactory, but dealers display a good deal of confidence. Wheat is steady, with limited offerings.

Montreal, May 1.—Favorable weather, subsidence of floods and the opening of navigation have tended to stimulate sales. Hardware and paints are active. Somewhat less activity is noted in dry goods and groceries. Collections are moderately good. Dominion elections tend to unsettle trade. Quebec city reports a slight improvement. Country roads are better. The shoe manufacturers are not very busy, as it is between seasons. The damage by floods is less than was expected, but collections not good.

Halifax, May 1.—The weather conditions have not been favorable, consequently there is not much activity in general trade, and remittances are not satisfactory.

Dry Goods.

The market continues to show a quiet tone in nearly all departments, although a fair retail business is in progress. This should help conditions later. Cotton fabrics are depressed through oversupply, and sales are at low figures compared with the cost of production. Raw cotton is strong, owing to the light crop, in spite of the slow demand. Some specialties in printed fabrics continue to go well, but the movement in general prints is slow. Ginghams are dull and featureless. Dress woolens are quiet, but the mills, as a rule, are fairly employed on fall orders. The higher cost of foreign goods compared with domestic should help business with American mills. Men's-wear woolens are dull and much machinery is idle, with the prospect yet very unfavorable.

Wool.

Trade continues dull, and values are in buyers' favor for all kinds of domestic wool. Manufacturers are picking over the market, and only taking large lines when they find a bargain. Fleece wools have declined fully 2c. a pound since February, if not more, as at the decline they go slowly. For XX and above Ohio 18c. is a full price to quote, with X at 16½c. Combing wools and No. 1 clothing fleeces are also lower, although offerings are light. Dealers have been holding up prices in sympathy with Australian grades, but they would not sell. Territory wools are dull, and not enough business is doing to establish prices. For fine medium and fine scoured it would be hard to sell much above 30c. The London auction sale of wool opened April 28, with prices about 2½@5 per cent. lower than the close of the previous sale. There is little call from this country, as prices are yet above the basis ruling here.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

SOUTHERN TEXTILE MANUFACTURERS' ASSOCIATION.

The Boston *Journal of Commerce* says: "A call has been issued and sent to prominent men in the south, inviting all southern textile manufacturers to attend a meeting at Atlanta, Ga., on Wednesday, May 13, 1896, at 10 o'clock in the forenoon, at the auditorium of the Aragon Hotel, for the purpose of discussing matters of mutual interest, and, if thought advisable, to effect a permanent organization. This call is in response to a circular letter sent out some time since to the textile manufacturers of the south, and of which we made mention at the time, in which it was stated that in the event of one hundred or more favorable replies being received, obligating as many manufacturers to attend a meeting for the purpose of effecting an organization, a meeting would be called. The required number of names were obtained, and the call is signed by the same manufacturers who signed the circular letter.

"The object of this convention is to form an organization which will be to the mutual advantage of southern manufacturers and to regulate prices of production of all southern manufacturers. In the circular letter the scope of the organization was outlined, the best features of the New England Cotton Manufacturers' Association being taken as a basis. For the purpose of maintaining a general interest, it was thought that the association should meet in convention annually, discuss subjects of general interest and hear papers by practical men, with an annual banquet to be held in conjunction with the regular meetings. The committee announced that it wished it to be distinctly understood that the movement was not in the interest of any particular locality or for the promotion of any particular idea, the whole purpose being to effect an organization that should be of mutual benefit on general lines.

"The call of the committee is without restriction of any character, and whether or not reply has been made to the circular letter sent out, all southern textile manufacturers are cordially invited to attend or send delegates, and to use their influence for the success of the meeting. From the interest which has already been manifested in the convention it can be confidently predicted that it will be large and enthusiastic.

"The organizing committee consists of the following gentlemen: J. D. Turner, president Exposition Cotton Mills, Atlanta, Ga.; T. B. Dallas, treasurer the Dallas Manufacturing Company, Nashville, Tenn.; J. F. Hanson, agent Bibb Manufacturing Company, Macon, Ga.; George E. Mebane, treasurer and manager Asheville Cotton Mills, Asheville, N. C.; James P. Verdery, president Enterprise Manufacturing Company, Augusta.

"In this list will be recognized the names of some of the most active and enterprising men connected with the manufacturing interests of the south. Under their direction it cannot be a question about the success of the organization, and that it will be a great help in advancing the textile interests of the south."

COTTON GOODS OUTLOOK.

A Fall River dispatch, April 25, says: "Manufacturers are still further discouraged. Viewed from the point of primary market indications, the outlook is not an agreeable one. The shutting down of the American print works brings into the open market the production of the Iron Works mills, and emphasizes the fact that no great demand exists for indigoes or shirtings, or the older products of the largest calico printing establishment in the country, and reminds the business men again that this one concern alone is carrying nearly a million pieces of printed goods, while the stock of gray goods in this center is 1,351,000 pieces. Until this large supply is moved, the manufacturers do not look for a steady trade at higher prices.

"There has been talk of offering a large block of gray goods at a discount from the ruling quotation to-day, but the fact that a cut in prices failed to move any appreciable amount of American goods has effectually put a quietus on that suggestion.

"The high price of cotton is the most disheartening feature of the situation. The grades of cottons used here cost now 8⅛c. per pound, and it is believed that the quotation will be higher before it is lower. There is no mill in the city that can do any better than break even, at the present prices of cotton and print cloths, and a majority of manufacturers predict a shutdown in July or August. Some of them are urging a curtailment now rather than waiting until later, when a reduction in wages will be suggested as a means of forcing a curtailment.

"An old and skillful manufacturer here says that

in no way can he secure contracts in small or large lots that will net him a profit. Under those conditions he is ready and willing to curtail production in a manner that will best keep his help together. If it is agreed that the time has arrived when Fall River must run until all its competitors are compelled to shut down, he is willing, he says, to live up to such an agreemeet; sull, he believes it is not good business policy to do so.

"Another manufacturer says he does not think any Massachusetts mills can fight Rhode Island, Connecticut or New Hampshire to a standstill while handicapped by a 58-hour law as against a 61-hour law.

"The King Philip mills have shut down about 384 out of 2,900 looms. They were running on the finest grades of American satines, made from sea-island cottons, and there is no pressing demand for these goods now.

"There have recently been several warm discussions among stockholders in mills whose dividends have been cut down. One corporation having a surplus of $137,000, and which made $20,000 in the past quarter, declared a quarterly dividend of only 1 per cent., while another having a surplus of $200,000 is preparing to cut down its dividend, and at the same time is agitating the erection of a large weaving shed."

BRITISH VIEW OF THE TINPLATE TRADE.

The London *Iron and Steel Trades Journal* says: "The trade returns issued this week show that this important Welsh trade continues to diminish in volume. The contraction is chiefly due to the diminished requirements of the United States, which, in the returns for last month, are again very marked, the falling off for the quarter amounting to £371,631, or about 34 per cent. Last month we exported 21,258 tons of tinplates valued at £244,611, as against 30,801 tons valued at £360,128 in March, 1895. The falling off in the exports to the United States is most marked, the total exports to that country during last month only amounting to 8,903 tons valued at £101,901, as against 18,743 tons valued at £219,174 in March, 1895. It is evident that the United States will continue to take less and less from us in the way of tinplate, and it is like flogging a dead horse for tinplate manufacturers to endeavor to get the American trade back again while a duty of 5s. 2d. per box continues in force. The tinplate industry has taken firm root on American soil, and all that may be said and done will not alter the fact. It is true that we have some slight advantage from cheaper labor, but this is compensated for by the more modern plants and labor-saving appliances which the Americans have adopted. We have every evidence that the American tinplate manufacturer is well able to hold his own against Welsh competition. It cannot be gainsaid that the Welsh makers did much to encourage the establishment of the manufacture of tinplates in America. Previous to the McKinley tariff coming into force, the Welsh manufacturer enjoyed good times and got every farthing possible for his goods, and it is a well-known fact that many made a very good thing during the boom. When the bottom dropped out of the trade, several of the knowing ones retired on what they had made. Those remaining in the trade kept prices up as long as they could, and only made concessions when absolutely compelled, until the American manufacturer had to be reckoned with. In addition to this, when the American tinplate industry was in its infancy, makers here did not hesitate to supply the American firms with black plate until they got their mills in order and were ready to roll their own; and we now find, according to the latest advices from the United States, that there are 35 black plate plants in operation, or ready to operate, with 156 black plate mills completed. Most of these plants have the equipment to coat some or all of their black plate; two of them have additional black plate mills, to the number of 13, in process of erection, while there are two black plate plants, with six mills, in process of construction. This makes a total of 37 black plate plants, with 175 mills, built or building. Of the black plate mills ready to operate, between 75 and 80 per cent. are turning out their full quota of black plate. There are about 34 coating plants, and between 50 and 75 per cent. of them are in steady operation. Our exports of black plate for last month also show a falling off as compared with the previous month, and tend to show that the Americans, having got their mills in order, are now becoming independent of our supplies of black plate. The consumption of tinplates in the United States has remained apparently stationary for nearly four years at about 6,500,000 boxes. We may reasonably expect in the next two years a period of activity that will greatly increase the demand. It is only the experience of the past twenty-five years on this article. Whether the Welsh tinplate industry will benefit to any extent from this probable increase in consumption remains to be seen, but it is extremely doubtful. The Americans are able to cope with their present requirements, and we may take it for granted that any development in the demand or considerable advance in prices would cause more mills to be put into operation.

"With regard to the present position of affairs in South Wales, in a recent issue we suggested that a joint conference of masters and men should meet as soon as possible in order to consider the best means of finding a way to adjust the difficulties and depression now existing in the trade. It is satisfactory to note that at the annual meeting of the council of the South Wales Tinplate Workers' Union, held on Saturday last at Swansea, an important discussion ensued respecting the depressed condition of trade took place. It was generally expressed that the Welsh tinplate trade was passing through a most critical period, the predominant question being how to recover the trade lost by the Americans manufacturing their own plates. It was eventually decided to endeavor to arrange a conference between both masters and men. This is a move in the right direction, and we hope that the masters will meet it in the right spirit, and that the outcome may be that the relations between masters and men may be put on a more satisfactory footing. The crux of the whole question, however, is that the production of tinplates greatly exceeds the demand, and until the supply and demand are more equally adjusted, the depression must continue. It is true that mills continue to close, but there still remain running more than sufficient to supply the existing demand."

LUMBER OUTLOOK ON THE PACIFIC COAST.

The Minneapolis *Mississippi Valley Lumberman* says: "Pacific coast lumbermen seem likely to fare pretty well as far as trade is concerned this year, according to our latest advices from beyond the Rockies. Well-posted lumbermen of San Francisco are of the opinion that the present will be a big year for lumber in California, for in San Francisco already, with only a little over one-fourth of the year gone by, 128,216,000 feet of lumber has been received. The trade has gone on increasing in volume since the first of the year, and the different mills from Puget sound to the Golden Gate that seek a market in San Francisco for a whole or a part of their product have been especially active in shipping, and it does not seem at present as if there was to be any let up in the volume of business. The vessels that make a living for their owners, whether steam or sailing vessels, or which are owned by the mill companies, are now kept busy handling lumber.

"The January receipts at San Francisco, by sea, were 31,049,000 feet, in February 36,626,000 feet, and in March 43,209,000 feet, besides a large quantity of shingles, lath and railroad ties, which shows that there has been a steady increase right along. April receipts at the Golden Gate may be a little behind those of March, but not much, and it is estimated that San Francisco will receive altogether this year fully 150,000,000 feet of redwood and 250,000,000 feet of pine. The total cut of the state will be in the neighborhood of 500,000,000 feet, of which there will be 230,000,000 feet of redwood from Humboldt, Del Norte, Mendocino and Sonoma counties and 30,000,000 feet south of the bay of San Francisco. The rest of the cut will be out in the interior from the headwaters of the Sacramento to those of the San Joaquin along the great mountain slopes, where fine timber grows. Yellow and sugar pine of various descriptions will make up the balance of the cut. Besides this, there will be shipped to southern California from the Puget sound country and the Columbia river about 75,000,000 feet of pine, which will make, consumed in the state and shipped from its borders, between 800,000,000 and 900,000,000 feet of lumber.

"Some of this will be used in the construction of the San Joaquin and other new railroads in California, which are also making a good demand for railroad ties. The most encouraging thing about the situation, looked at from the manufacturers' and wholesalers' standpoint, is the fact that under the present manner of doing business on the Pacific coast, among the cargo men, a living profit is possible for the mill men. For the past three years the lumber trade of California has been such that many large handlers of lumber have been in the business largely because they couldn't get out of it, and continued to do business often at a loss, with the hope that the tide would some day turn. It looked to be a survival of the fittest. But the cargo combination, it is reported, has now solved the problem, and, owing to the hard work put upon the formation of the Central Lumber Company by the few men who originally had faith in it, Pacific coast lumber is now being handled on a paying basis. It may yet be too early to predict with a certainty as to the future and the effect that the combination will have on the business out there, but from all that can be learned it is already having a beneficial effect, and is destined to continue so. After a short season of better trade, timber lands of California will recover something of their original value, and will become a desirable investment. And not only will California be benefited, but the lumber interests of Washington and Oregon will receive their share of the prosperity that now seems nearer at hand for those in the lumber trade than for some years past."

JAPAN FILLING HER OWN REQUIREMENTS.

The London *Colonial Importer* says: "While so much is being heard about Japanese competition abroad, it should not be forgotten that this at the present time is only, so to speak, fractional in proportion to the general increase of the trade, and that it is rather to her future competition that so much importance attaches. Japanese enterprise, up to the present, has been more severely engaged in filling the requirements of her own markets than in opening out export markets to any appreciable extent. When she finds that she is unable to easily consume her manufactures, no doubt special energy will be thrown into the export connection. Within the last seven years especially the industry of the country has increased simply by leaps and bounds. There is too eager an assumption, however, on the part of foreigners that this increased vitality is due to her export trade. That her export trade is steadily increasing is proven, but in no comparison whatever to the increase of her productions. Formerly Japan imported practically every manufactured commodity and exported only her artistic goods. Now she manufactures the greater portion of her requirements, and it is in feeding her internal consumption that the great bulk of her factories are employed, rather than in supplying an export demand. Her manufactories have recently displaced imported goods for homemade goods in textiles, nickel and electro-plated goods, furniture, cutlery, matches, soap, wearing apparel generally, paper, and similar domestic requirements. The things in which foreign exporters continue to fairly hold their own are machinery and chemicals, more especially the heavy chemicals—alkali, bicarb. soda, sulphate of copper, etc. A few years ago chlorate of potash was entirely imported, but now a considerable percentage of this chemical is produced locally, and exactly the same remarks apply to caustic soda, the local production of this latter, indeed, bidding fair to soon come up to the total consumption of the article, while for the manufacture of sulphuric acid the Japanese have quite recently laid down several plants. A very large portion of the trade in the other chemicals named lies in the hands of English merchants, and almost the whole of the machinery trade. We do not intend to convey that Japanese manufacturers are now supplying the country's domestic requirements entirely, because a fairly heavy import trade in general articles of commerce is still being done, decreasing, however, year by year. Whereas a comparatively few years ago the manufactured article only was imported, it is now the raw article, and the money that was being paid out of the country for foreign labor is being distributed among the industrial classes."

THE BRUSSELS BIMETALLIST CONGRESS.

The New York *Engineering and Mining Journal* says: "The cause of international bimetallism is by no means dead; on the contrary, it is making substantial progress, and especially in Great Britain, where nearly every prominent political economist of less than seventy years of age is a bimetallist. On the 20th inst. there was at Brussels a very important meeting of bimetallists, representing, unofficially, most of the European countries, and it was decided to establish a permanent bimetallist congress, with the object of discussing such suggestions as are brought before it, and finally arriving at the most desirable practical plan for an international adoption of bimetallism.

"This is the first rational step that has really been taken of an international character, for, in all the monetary congresses of the past, in 1878, 1881 and 1892, no plan whatever was ready or presented, and such an official congress, called together without any prearranged plan, could never be empowered by the respective governments to do anything; failure was, therefore, inevitable. Now it may reasonably be expected that a workable plan will be formulated, and will be understood and generally approved by the several governments before the next official monetary congress convenes.

"The names of the principal representatives of the various nations at this conference were as follows: Herren von Mirbach de Wabnitz and Arendt, for Germany; Sir William Houldsworth and Messrs. Grenfell and Shacksommer, for Great Britain; M. Raffalowich, for Russia; M. Rochussen, member of Council of State, for the Netherlands; Counts Alexandre Karolyi and Koloweat, for Hungary and Austria, respectively; M. Bonesco, for Roumania, and M. Raeder, for Denmark.

"The first session of the congress was exclusively devoted to the establishment of a bureau. The second session opened under the presidency of M. Beerneart, Belgian Minister of State. The congress commenced its labors with a speech by M. Allard, a Belgian bimetallist, and one of the directors of the National Bank, who explained at length the object of the congress, namely, to place the question of bimetallism on a practical basis, removed from any question of any school.

"Herr Arendt, member of the Reichstag, supported the speech of M. Allard, and the session was concluded by a speech by the French delegate Fougerolle.

"How can Americans best promote the success of the bimetallist cause? Assuredly by rejecting all propositions that would lead to a depreciated currency and that would identify, in the public mind, bimetallism with depreciated or dishonest money."

HIGHER COAL PRICES.

The Philadelphia *Press* this week says: "The Philadelphia & Reading Coal and Iron Company yesterday issued a circular announcing that an advance of 25c. a ton would be made in all sizes of coal on and after this date. The advance has been made at Port Richmond and at Port Liberty; the changes at Port Richmond are:

	Broken.	*Egg.*	*Stove.*	*Chest.*
Hard white ash	$3.35	$3.60	$3.75	$3.50
Free white ash	3.25	3.50	3.75	3.50
Shamokin	....	3.75	4.00	3.60
Schuylkill red ash	....	3.75	4.15	3.75
Lorberry	....	3.75	4.15	3.75
Lykens Valley	4.25	4.60	4.75	4.50

"The new prices at Port Liberty are:

	Broken.	*Egg.*	*Stove.*	*Chest.*
Hard white ash	$3.60	$3.85	$4.00	$3.75
Free white ash	3.50	3.75	4.00	3.75
Shamokin	....	4.00	4.25	3.85
Schuylkill red ash	....	4.00	4.40	4.00
Lorberry	....	4.00	4.40	4.00
Lykens Valley	4.50	4.85	5.00	4.75

"At about this time every year there is considerable talk afloat about the railroad companies in the east going to secure all the coal needed from Canada. Last week bids were asked from all the bituminous coal companies, and it appears that the bids of the coal companies of Pennsylvania, Maryland, Virginia and West Virginia were rejected on the ground that the coal could be bought cheaper from the Canadian operators.

"The coal companies of the states mentioned are united, and the business is conducted under the name of the Bituminous Coal Association. This association was organized a few months ago for the protection of the bituminous coal trade, as for the past few years bituminous coal has been sold at such a price that has not been profitable either for the operator or the miner. This year the price has been advanced, and the operators have so far stuck together. The refusal of the bids by the New England roads is not taken seriously by the operators here, as it is well known that the mines in Nova Scotia have not the facilities at present for supplying any large demand, and if a large lot of coal was ordered from them it would have a tendency to increase water rates, which would, of course, add to the cost of the coal. A number of the bituminous operators were seen yesterday, and they all unite in saying that there is little fear of Nova Scotia coal supplanting ours."

Circulars issued at New York by the Lackawanna and the Lehigh Valley companies intimate the advance in the price of anthracite coal. Each coal-producing company will make a general advance of 25c. per ton, to take effect May 1. Following is the new schedule: Grate, per ton, $3.50; egg, $3.75; chestnut, $3.75, and stove, $4. The circulars of the Pennsylvania, Delaware & Hudson, the Erie and other companies were to be out before the end of the week. The aggregate anthracite output for April will reach about 3,000,000 tons, which is about the same as April, 1895, although the output for April of last year was, by agreement, restricted to 2,400,000 tons.

In the United States about 79 per cent. of the total number of concerns failing had $5,000 or less, and 13 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

E. S. HOOLEY,
} Committee.

LEOPOLD WALLACH, of Counsel.
HENRY ZUCKERMAN, Secretary.

FINANCIAL.

TO THE HOLDERS OF

St. Louis & San Francisco Railway Company

4 % CONSOLIDATED BONDS.

Holders of Bonds should forthwith deposit them at either The Mercantile Trust Company, 120 Broadway, New York City, or at its agency for this purpose, American Loan & Trust Company, 53 State Street, Boston, Mass., under the Plan and Agreement of reorganization, dated April 21st, 1896.

Holders of 4 per cent. Consolidated Bonds paying the assessment of 10 per cent. will receive for each Consolidated Bond of $1,000,

$140 IN FIRST PREFERRED STOCK,
$1,000 IN SECOND PREFERRED STOCK,
$1,800 IN COMMON STOCK,

and will have the right to subscribe to securities as set forth in the plan.

The first instalment of the assessment, 5 per cent., on the Consolidated Bonds, must be paid at the time of deposit; the second instalment, 5 per cent., July 15th, 1896. The right to subscribe to the securities offered for subscription to depositing Bondholders must be availed of at the time of deposit of the Consolidated Bonds.

JUNE 1ST IS THE DATE SET FOR FINAL DEPOSIT UNDER THE PLAN; THEREAFTER BONDS, IF TAKEN AT ALL, WILL ONLY BE RECEIVED UPON TERMS TO BE ANNOUNCED.

NEW YORK, April 29th, 1896.

Northern Pacific & Montana Railroad Company First Mortgage Bonds,

having deposited the same under the Plan and Agreement of reorganization dated March 16, 1896, said Plan and Agreement are hereby declared operative.

Holders of outstanding securities of the above described issues may still deposit same under the terms of said Plan and Agreement, but only on payment of the following penalties:

On Bonds, Dividend Certificates, Notes and Equipment Stock..... 2%
On Northern Pacific R. R. Co. Preferred Stock..... ½%
On Northern Pacific R. R. Co. Common Stock..... ¼%

The right is reserved to terminate this privilege of deposit at any time and without notice.

Holders of certificates heretofore issued by the Mercantile Trust Company of New York for Bonds deposited under the Bondholders' Agreement of February 19, 1894, not already stamped by us as approving the Plan and Agreement of March 16, 1896, are hereby notified to present their certificates at one of our offices on or before Thursday, May 7th, 1896, in order that we may stamp their approval thereon.

The Managers hereby give further notice that they will exclude absolutely from the Plan and Agreement any and all bonds represented by any such unstamped certificate, unless, on or before said date, such certificate shall be so presented and stamped.

INSURANCE.

THE UNITED STATES LIFE INSURANCE CO.

1850.—1895.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

OFFICERS:

GEORGE H. BURFORD, *President.*

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 9, 1896.

It seems likely that the adjournment of Congress will take place not later than the first week in June. The House has already declared in favor of an early adjournment. By a resolution adopted a few days ago it provided for adjournment on May 18. It is not regarded as likely that the Senate will agree to the date fixed by the House. One cause of delay will be the River and Harbor bill, about which there is usually a difference of opinion involving a conference between the two houses. After the bill has been agreed upon it may be necessary to wait another ten days for the action of the President upon the measure. It is thought that the President may disapprove the measure, and that it may be necessary to make an attempt to pass the measure over his veto. In view of these contingencies the best informed observers at the capital do not think that an adjournment can be had earlier than June 1, and perhaps not for some days thereafter.

Once again the Torrey bankruptcy bill, which has been before Congress for many years, has succeeded in passing the House. The majority by which the measure was passed was a large one, viz., seventy-six. It was generally believed that the bill could secure the indorsement of the House, but it was not expected that the decision in its favor would be so pronounced. The vote upon the bill was taken on Saturday, after five days of debate. A number of votes were had upon amendments offered to the bill, some of which were adopted, and upon all these questions the majorities were much narrower than the final one recorded upon the passage of the completed measure.

The House struck out, on motion, as a ground for the declaration of involuntary bankruptcy, suspension and failure to resume for thirty days, and until a petition was filed, while insolvent, the payment of commercial paper of the debtor aggregating $500 or over. By another amendment, a petitioner to have a person declared a bankrupt was required to file a bond for damages and costs before the court could act upon the petition. Still another amendment altered the bill so as to require at least three creditors to join in any case to throw a debtor into bankruptcy. The House refused, by a substantial majority, to strike out the involuntary features of the bill, and, by a smaller majority, declined to restrict the application of the involuntary features to cases of actual fraud. A larger majority was recorded against the Bailey substitute for the Torrey bill, while the bill reported by the Senate Committee on the Judiciary was rejected by a narrower margin.

The situation as regards the bankruptcy bill is, therefore, as follows: The House has adopted the Torrey bill, whereas the Senate Judiciary Committee has reported a different measure, which is a very much less desirable one, and which, indeed, would do little to improve the existing condition of things. Having regard to the present composition of the Senate, it seems more than likely that the measure reported by its Judiciary Committee would secure a majority. There would then ensue, apparently, a deadlock, which could only be broken—if, indeed, it could be broken—by a conference. There seems no likelihood, however, that the measure will be progressed so far in the Senate at the present session, owing to the near approach of adjournment, and the habit of almost interminable debate which has become such a feature of the proceedings of the upper chamber of the national legislature of late years. There still remains before the advocates of a proper national bankruptcy law, therefore, still another period of earnest propaganda before they can count with confidence upon the enactment of such a measure.

No little consternation has been created in the ranks of political spoilsmen by the sweeping order of President Cleveland, signed this week, which placed about 30,000 additional places upon the classified lists. It is understood that this action increases the number of offices protected from the devices of the spoilsmen to the number of over 85,000, so that the bulk of the employees of the general government now hold their offices subject only to the conditions which hedge about employment in ordinary business. No one who looks back at the change which has taken place in the course of the last decade and a half can fail to be struck by the vast progress made in the substitution of the merit for the spoils system. The results of what often seemed a discouraging struggle should encourage advocates of reform in governmental systems and methods everywhere to "abide and endeavor."

In accordance with an invitation of the Chamber of Commerce of Toledo, the first annual convention of the Credit Men of the United States will be held at that city on June 23, 24 and 25 next. This gathering will be composed of the credit managers of representative financial and commercial establishments throughout the United States. The scope of the work which may be accomplished by such an association is very wide, and will, no doubt, be elaborated as the body gathers force. For the present the projectors of the movement have set before themselves the following objects, viz.: The better protection of credits, the reduction of losses from bad debts, the prevention of fraud and injustice to creditors, the making the prosecution and punisbment of fraud more certain; the reform and improvement of collection laws, the improvement of commercial reporting systems and collection methods, and the improvement of present methods of handling bankrupt estates, etc. The deliberations of the meeting at Toledo will be watched with interest.

A compromise has been reached by the Senate Committee on Foreign Relations on the bills before it for the construction of a cable to Japan by way of Hawaii. The measure ordered to be reported directs the Postmaster-General to contract with the lowest bidder for the construction of a telegraphic cable between the United States and Japan by the way of Hawaii and the midway Islands. It is stipulated that the price shall not be in excess of $160,000 a year, and that the subsidy shall be dropped after the payment of this sum for a period of twenty years, during which time and forever afterwards the company shall carry government messages free of all cost. These are in substance the terms offered by the Scrymser Company, which has been offering terms in competition with the Spaulding Company before the Senate Committee for some time past. In the report submitted with the bill the committee calls attention to the decree of the Hawaiian government to secure telegraphic communication, and the probability of Canada getting the cable in the event of the United States withholding its assistance.

The distinction between affording shelter from motives of humanity and the grant of the so-called right of asylum was recently drawn by Secretary Olney in a communication to Minister Tillman, of Ecuador. The communication was called forth by a request for instructions from Minister Tillman, in whose care the Minister of War of Ecuador placed himself and his family during the recent revolution in that republic. Secretary Olney advised the minister that the shelter thus given to one of the prominent members of the overturned government, and, as it appeared, similarly granted by other foreign representatives to the families of members of the late government, did not appear up to the time of writing to have been of the nature of asylum, as the word is properly understood by international authorities, there having been apparently no national or municipal government in the capital.

Shelter under such circumstances, the Secretary said, was a mere act of humanity, unaccompanied by any assumption of extra-territorial prerogatives or interference with any rights of legitimate government or sovereignty, and was quite distinct from the so-called rights of asylum, which can logically only be exercised in disparagement of the rights of the sovereign power by withdrawing an accused subject from its rightful authority. The practice of this kind of asylum, the Secretary said, is not a right derived from positive law or custom; it is not sanctioned by international law, and can only find excuse when tacitly invited and consented to by the state within whose jurisdiction it may be practiced. Secretary Olney further declared that it is the uniform rule of the government of the United States to discountenance asylum in every form, and to enjoin upon its agents the exercise of the utmost care to avoid any imputation of abuse in granting such shelter. It may be tolerated as an act of humanity when the hospitality afforded does not go beyond sheltering the individual from lawlessness. It may not be tolerated should it be sought to remove a subject beyond the reach of the law to the disparagement of the sovereign authority of the state.

The millenium or thousand years' existence of the Hungarian nation is being celebrated at Budapest with unusually impressive ceremonies. The chief feature of the commemoration is a national exhibition, both historical and contemporary, which aims to portray the romantic past and the existing condition of a picturesque nationality. The project has been taken up enthusiastically by the nation itself, and has the active support of the Emperor-King and the imperial administration generally. The exhibition will continue until the end of October, so that there will be ample time for all interested to get a close view of the work done by the ancient Magyar kingdom in developing its material resources, as well as of the race peculiarities of a people who have, since their advent upon European soil, maintained a position distinctively their own.

STOCK MARKET PRICES AND PROSPECTS.

In spite of the dullness and the liquidating tendency which has accompanied it, the stock market still displays more or less of a hopeful feeling. A fortnight ago the impression prevailed in speculative circles that Wall street was on the eve of a "boom" of no inconsiderable proportions. In fact, at the present time some of the most prominent among the stock market bears are quoted as saying that they still look for a decided appreciation in values, and for that reason are unwilling to institute a campaign having for its object the production by manipulative arts of a lower range of values for the prominent railroad and industrial securities. In spite of the declines of the past week (declines which are attributable partly to the weariness of the speculative community of a situation which gives no definite promise of anything but further delay, and partly to the recommencement of gold shipments), the quotation list offers satisfactory evidences that the professional traders in the Wall street market are, as a class, imbued with these ideas. There appears no longer to be any organized bear party, and the so-called short interest is, on the whole, reduced to narrow proportions. Nor are large interests which hold the bulk of the stocks, the floating supply of which are the vehicles of active speculation, at all inclined to part with them at the present level of prices. In other words, the underlying tone is one of hopefulness, if not of positive strength.

The prevalence of such views is checked by one consideration, which, whether right or wrong, has taken possession of the business and financial world. In Wall street there is still doubt about the deliverances of the political parties upon the currency question, it being feared that one or both may make an equivocal declaration on the question of our monetary policy. The party which inspires the most confidence in this respect is deemed likely to triumph at the polls, and the "street" is apparently impressed by the situation, to the extent that it is ready to discount the effect of this upon the general prosperity of the country and its corporate interests just as soon as the political platforms are formulated. One thing not to be disregarded is that foreign speculative and investment interests need only some encouragement to at once take an active part in our market and to buy largely of our securities. This view is supported by the greatly reduced interest shown in mining shares, which have so long monopolized the attention of the London market, in consequence of the political complications in the Transvaal Republic and the unsatisfactory condition in which the mishap to Mr. Rhodes' adventurous policy has left British interests. Equally effective is the extreme advance in the London market price for all classes of British home investments, the quotations for securities of that class having reached a level which leaves little or no return upon capital. Under these circumstances American railroad and other stocks and bonds seem to be the natural refuge of the immense amounts of idle capital with which the London market is replete. That the tide of foreign investment and speculation has not already turned in this direction is ascribed to the uncertainty and distrust which our currency policy has created, and it is now argued that any reasonable assurance that compromises like those of the last two decades with the silver-producing interest and the upholders of the silver cause are at an end will at once cause a revival of European buying and give support to a wide speculation, with a permanent effect upon prices.

Events may not bear out these views. Wall street itself is, to say the least, nervous on the subject, but for the moment the case is as stated above, and the factors in question are still powerful in deciding the attitude of the professional class of speculators who, in the complete absence of public or foreign participation, make the stock market.

Under these circumstances it is interesting to consider the position of stock quotations relatively to the recent general movements of the market. This may be exhibited in a tabular form. The twenty stocks selected include only those which have not passed through reorganization or been subjected to assessment. This excludes a number of important stocks which play a very considerable part in the daily fluctuations. The figures given herewith include the closing quotations on May 8, compared with the highest and lowest figures of the current year (which in the average were made during the last week of April and the first week of January respectively), the highest in 1895 (made, as a rule, in September), and the lowest of the July panic in 1893. The figures are as follows:

	Closing May 8, '96.	*Highest, 1896.*	*Lowest, 1896.*	*Highest, 1895.*	*Lowest, 1893.*

It will be observed that the prices of the present week are somewhat lower than the list of the current year, though still considerably above those touched in January. The room for improvement as compared with the best quotations of the "boom" of 1895 is, however, striking. The average of the highest figures which the given twenty stocks have attained since January 1, 1896, is 78, while in September, 1895, the same stocks sold up to an average level of 87¾. The difference between the latter and the average in the panic of 1893—54¾—is, however, great. It suggests that the room for improvement is not as large as might be imagined, though in particular stocks the changes which might ensue should the hopes which the speculative community now entertains be realized would certainly be of a marked nature.

ANNUAL CONSUMPTION OF WHEAT PER CAPITA.

For nearly twenty years it has been estimated by the officials of the Agricultural Department that the average annual consumption of wheat per capita throughout the United States has been 4⅔ bushels, and this has entered into official reports and estimates, in which it has been sought to arrive at the quantity of wheat carried over at the end of cereal years; or, at least, into the calculations to test the results of reports of farmers' reserves and other stocks of wheat. In the report of the Secretary of Agriculture for 1893 it is stated: "It has been said before that authorities are not agreed as to the average consumption of wheat per capita in the United States. Mr. Edward Atkinson, who has given careful study to the question of food consumption, says ("Industrial Progress of the Nation," pages 34 to 38) 'the average ration of wheat flour to each adult person in the United States is well ascertained to be one barrel each year.' He rates as adults all persons of ten years and upwards, and counts two children under ten years as the equivalent of one adult in respect to their consumption of this item of food."

In 1885 the statistician of the Department of Agriculture reported that "eight years ago, as a result of careful and repeated investigation and analyses of the local distribution, the estimated average consumption was placed at 4⅔ bushels per annum." This carries back the date of the determination of the average total consumption of wheat per capita at 4⅔ bushels to about 1877, nearly twenty years. Just what investigation and analyses of local distribution were made by the statistician of the Department of Agriculture in 1877 or prior thereto is not explained in the copies of the reports of the Commissioner of Agriculture now at hand. It remains true, however, that this estimate of 4⅔ bushels of wheat as the average consumption of wheat per capita, with, so far as we know, Mr. Atkinson's variation, 4½ bushels per capita, has remained the basis of calculations of the consumption of wheat in the United States ever since.

During the last five years reports of the Agricultural Department on the annual production of wheat, when examined in connection with annual exports, quantities used for seed, farm reserves on March 1, and other data, have shown that either the reports of the size of the crops or the farm reserves, or, by inference, the quantities allowed for annual consumption as food, or all, were erroneous. So plain has this fact become during the past semi-decade that the trade have, perforce, regarded the government estimates of the size of the crops as by far too small. This was made plain because so much more wheat was found on farms and in the available and visible supplies than the reported size of the crop would permit in view of known exports. Reports of the size of the crops of wheat of late years have undoubtedly been understatements, some of them strikingly so. It is likely that the quantities estimated as used for seed have been approximately correct and quantities reported sent abroad, either in the form of wheat or wheat flour, are undoubtedly correct. The inference is therefore forced, in view of unexpectedly large supplies on hand, on and off the farms, on March 1, or at the close of the cereal year, for several years, that several crops have been underestimated.

It is only natural, in view of this, that the question of the accuracy of the twenty-year-old calculation or estimate of the annual consumption of wheat per capita, 4⅔ bushels, should be raised. It goes without saying that hardly anything short of a thorough canvass or census report of the consumption of wheat per capita would prove the case. Yet light may be thrown on the subject by an investigation in the nature of a canvass throughout the country, which, though complete in itself, does not include every household. It was with this thought that BRADSTREET'S undertook an inquiry among heads of families, householders and others, institutions, public, semi-public, educational, charitable, penal and others, at representative centers, at cities, towns, and in the country districts throughout the United States, with a desire to learn, as far as possible, to what extent wheat is consumed per annum per capita so far as the ground covered may indicate.

Accordingly, a form of inquiry was sent out containing a few questions, replies to which should indicate the number of members of families, the number of adults, the number of children under one year, and the number of servants, during March last, together with the total number of pounds of wheat flour consumed, in gross, including that consumed in the form of crackers, bread, pastry, etc., whether purchased or made at home, as well as the quantity of wheat breakfast food consumed.

It is needless to explain that many of the replies received contained inaccuracies which rendered them useless. It should be added that all children over one year of age were counted as bread eaters, the same as adults, but those under one year of age were omitted from the calculation. These inquiries were mailed in the proportion of one-third to cities, and two-thirds to small towns, villages and the country districts quite generally throughout the United States, and also in the Dominion of Canada, and out of 5,000 circulars so distributed a total of about 1,300 apparently correctly answered circulars have been received and analyzed. The proportion of replies received from cities and from towns, villages and country districts has not been the same as that in which they were sent out. It is, furthermore, found that in some instances the inclusions of returns from certain institutions, educational, charitable, penal and others, have been so widely different from the general range of consumption in private families as to prove a possible source of misapprehension, and such have therefore been withheld in order to receive special attention.

Without claiming the results of the inquiry as equivalent to a demonstration, it remains true that what it does show in the different sections of the country is so much in accordance with what one might naturally expect, when conditions of life, environment, climate and other influences are considered, as to point unmistakably to the results of the inquiry being valuable.

In order to properly utilize the returns, an inquiry has also been made among leading (spring and winter wheat) millers at nearly all of the more important flour centers and some of the less important ones, in order to arrive, so far as possible, at a determination of the average quantity of wheat used in the manufacture of one barrel of flour weighing 196 pounds. The latter investigation results in valuable information, the general meaning of which alone we are at liberty to make public, inasmuch as millers are averse to making their names public in this connection. Suffice it to say that, taking spring wheat and winter wheat mills together, the quantity of wheat required to produce a barrel of flour would appear, on the face of statements furnished, to be nearly 4.4 bushels, which may perhaps be called actually 4.4 bushels when minor milling establishments are considered, those in which, perhaps, the relative efficiency of the processes is not highest. The general calculation heretofore has been that it required 4.5 bushels to produce a barrel of flour, and that only in mills of high efficiency.

In order to make as fair a test of the consumption of wheat per annum as possible, a list is given below of the varieties of occupations and businesses in which those are engaged who have made replies to our in-

quiries. Under the head of "merchants," it will be borne in mind, dealers in merchandise of all varieties are included, while under the head of "manufacturers" are comprised all who are at the head of manufacturing enterprises.

OCCUPATIONS OF THE 1,290 PEOPLE MAKING REPLIES.

Farmers.	Compositors.	Nurserymen.
Capitalists.	Barbers.	Blacksmiths.

Physicians.	Canvassers.	Government officials.
Clergymen.	Lumber.	City officials.
Lawyers.	Judges.	County officials.
Merchants.	Brokers.	Heads of institutions.
	Dairymen.	

The form of these questions, although few in number, is so comprehensive as to require care and intelligence to secure satisfactory answers. The blanks were placed in the hands of selected lists of individuals, as indicated above, and in many instances a correspondence was conducted with them to the end that full and accurate replies might be obtained. The inquiry thus made is merely preliminary, and, it is probable, may be pursued at a later date. When the character of the questions asked is regarded and the lack of available information in almost any household on the points asked about is considered, it is perceived that when we have obtained one set of complete and accurate replies out of every four letters of inquiry sent out, a fair beginning has been made in an effort to perform a public service. It would, indeed, be interesting to test this report by an investigation involving the coöperation of 100,000 heads of families.

From the foregoing exhibit, together with the summary thereof, it will be found there are forty-two states and territories included by the inquiry, North Carolina, West Virginia, Michigan, Indian Territory, Alaska and Oklahoma being excepted. There are 1,163 fairly complete returns covering the quantity of wheat flour consumed during March, 1896, by 30,227 people, the aggregate being, as given, 572,612 pounds, an average of 19.7 pounds each. It may be confessed this result looks large, yet hardly so when it is pointed out that some of the results of the inquiry, quite satisfactory in themselves as to details, have been omitted as not being typical.

Thus, one of the more important New York hotels, which fed an average of 500 people daily during March, used 24,304 pounds of wheat flour in that period, an average of 48 pounds each; another and similar hotel entertained 525 people daily at table during that month, supplying them with 27,918 pounds of wheat flour, an average of a little more than 53 pounds each. The mere fact that another and equally prominent hotel fed an average of 650 guests daily during March, and that they consumed an average of only 21.5 pounds each during the month, would seem to reflect either on the accuracy of the two preceding instances of the consumption of flour at hotels, or on its own report. Inasmuch, however, as the latter conforms more nearly to the general result as shown elsewhere, it alone of these three has been used. Reports of the amount of wheat flour consumed in several penitentiaries during March, where servants are not required to any great extent, and where bread probably forms an extra important staple in the bill of fare, show a range of wheat flour consumption per capita during March of from 35 to 40 pounds. These, likewise, have been withheld from the summary and the totals in the foregoing tabular exhibit as not illustrating the general condition.

It is a striking fact in the summary of replies, yet in accord with what may be regarded as preconceived notions, that at the south and in the northwest one finds the lowest rates of consumption of wheat flour per capita, 16.3 pounds in each instance, and it is due to special reports that replies from the Pacific states show the highest rate of consumption of wheat flour, 25 pounds. In the far-western states, and the territories included, next to the largest average consumption per capita is reported, 21.1 pounds of flour, while in seven central western states, from which the largest number of replies are received, covering the largest number of people in any of the groups, the average rate of consumption is 19.8 pounds of flour for March, and in the ten eastern and middle states the rate is 18.3 pounds.

There appears to be something more than a mere coincidence in the approximation to an average consumption of about twenty pounds of wheat flour per capita during March by more than 30,200 people throughout the country.

This is borne out by the result of that portion of our inquiry which extended throughout the Dominion of Canada, from which region 106 replies were received referring to the quantity of wheat flour consumed in March by 1,452 people, amounting to 29,090 pounds, or 20 pounds each.

From the public and semi-public institutions, military, educational, charitable, religious, penal and others, including institutes for the deaf and dumb, insane asylums, hotels and larger boarding houses and hospitals, some valuable statistics have been received. Omitting several New York institutions with the remarkably high average rates of consumption of wheat flour already referred to, other large hotels in that state show a rate of consumption of only 25 pounds, while one religious institution reports only 14 pounds, and one hotel as low as 18 pounds. Three orphanages in south Atlantic states report from 9.3 pounds as high as 15.4 pounds of wheat flour consumed per capita during March, while the rate at one Georgia hotel is 14 pounds, and at a school in Tennessee a little more than 12 pounds. At Fort Meyer, Va., from which the report may be considered exceptionally accurate, the rate of consumption of flour during March was 20.4 pounds, while at the United States Marine Corps at Washington it was 18.7, and that by the regulars at Washington barracks was 18 pounds.

An Ohio hospital reports a consumption of 20 pounds of wheat flour per capita during March, and an Indiana insane asylum 15.7 pounds. An institute for the blind in the same state reports 23.3 pounds; an Indiana hospital for the insane, 23 pounds; an orphanage in the same state, 18.2 pounds, and an Illinois home for the friendless, 22.8 pounds. An insane asylum in Illinois reports 20.7 pounds, and an Illinois school for girls says the rate during March was 17 pounds of wheat flour, while a large charitable institution reported the rate as low as 9.1 pounds. Seven Missouri public institutions report 3,776 inmates during March, who consumed 84,868 pounds of flour, or 22.4 each. At a Missouri asylum the March consumption of flour was 18 pounds each, and at a seminary in the same state only 10 pounds, while at a large hotel in Missouri it was 20 pounds, and at a soldiers' orphans' home in Iowa it was 18 pounds. A Wisconsin poorhouse, insane asylum and hospital including 870 inmates consumed 11.7 pounds of wheat flour; a college in that state 15.6 pounds; an asylum and almshouse 18 pounds, while the inmates of a deaf and dumb institute consumed 18.6 pounds of wheat flour during March. The students of a university in one of the northwestern states required 23 pounds of flour each as food, and the inmates of an insane asylum in the same state 22.5 pounds. A portion of the high average consumption per capita reported on the Pacific coast is accounted for by the inclusion of one or two institutions, hotels, asylums, etc., where there was an exceptionally high rate of consumption of wheat flour per capita during March.

While no reports are included in the accompanying tabular exhibits from West Virginia, it is proper to add that a special correspondent reports having made a fairly close investigation of the question under discussion, with the result that the annual consumption of wheat per capita there is ascertained to be about 5.5 bushels, a little in excess of the general average consumption per capita per annum elsewhere, as indicated by our investigation.

Accompanying some of the replies from farmers, merchants, millers and other business men, are letters which explain that the consumption of wheat per capita, particularly in country districts, was small in February and March, at the close of the winter season, owing to the more general use of corn meal, buckwheat and other substitutes, and that the flour trade generally reported the distribution of wheat flour during March smaller than what might be called the sales of an average month. This is the general tenor of such information as has been obtained on this point.

Whatever value the foregoing analyses of the returns of the consumption of wheat flour per capita during March by 30,227 people throughout the United States may have, it cannot be said to indicate less than that the average consumption did not, in all probability, vary much from 20 pounds of wheat flour per capita. Regarding the quantity of wheat flour consumed during March as one-twelfth of that for a year, and considering the average per capita consumption during March as approximately 20 pounds, it is plain that, so far as this test goes, the total annual consumption of wheat flour per capita is approximately 240 pounds.

If the 196 pounds of flour in the average barrel require 4.40 bushels of wheat in its manufacture, then one pound of flour is the equivalent of 1.346 pounds of wheat, and the 240 pounds of wheat flour which this inquiry seems to indicate to be the average annual consumption per capita, are equivalent to 323.25 pounds of wheat, or 5.387 bushels of wheat of 60 pounds each, or 1.224 barrels of flour. For those who choose to consider 4.40 bushels of wheat to the barrel of flour too low, notwithstanding the opinions offered by numerous millers, a like calculation may be worked out by such as prefer to use 4.5 bushels as the equivalent of a barrel of flour, or a higher proportion, but the result in either case will be that instead of the average annual consumption per capita being 4.5 bushels of wheat, as Mr. Atkinson has said was "well ascertained," or 4⅔ bushels of wheat, as the Agricultural Department has believed it to be, it is about 5.387 bushels, a little more than one and one-fifth barrels of flour per annum.

It is plain that the results of this inquiry, if accepted, might further upset those who have been endeavoring to explain the existence of unusually large wheat reserves and underestimated wheat crop totals by the claim that the accepted estimate of consumption of wheat per annum is too high. Our attempt to test the question appears to show that we are eating more wheat per annum per capita than has hitherto been suspected, even taking into account the eliminated child under one year of age, in this investigation.

CONDITION OF THE TREASURY.

Government receipts for the month of April amounted to $24,282,893, which represents a slight increase—a little over $35,000—as compared with those for April, 1895, but a decrease of over $1,700,000 as compared with those for March of the current year. The receipts for customs exceeded those from internal revenue sources by a little over $790,000, whereas for April last year the excess of customs over internal revenue receipts was over $1,800,000. The expenditures for the month amounted to $28,987,381, which represents an increase of a little over $1,700,000 as compared with those for the preceding month, but a decrease of over $4,000,000 as compared with those for the corresponding month of last year. The most marked reductions have been under the heads of war and pensions, though every item of expenditure shows some decrease.

The receipts for the ten months ending with April amounted to $274,892,733, which represents an increase of about $14,300,000 as compared with the corresponding period of the preceding fiscal year. Receipts from customs show a gain over those from internal revenue as compared with the corresponding period of the preceding fiscal year, the excess amounting to over $17,100,000 for the ten months of the current fiscal year, as compared with a little over $7,300,000 for the ten months of the fiscal year preceding. The expenditures for the ten months amounted to $298,347,923, which represents a decrease of over $7,500,000 as compared with the corresponding period of the preceding fiscal year. The most marked item of decrease was one of nearly $7,600,000 under the head of civil and miscellaneous. Other decreases were a little over $2,000,000 in expenditures for the navy and over $2,900,000 on account of pensions, while there were items of over $3,200,000 on account of interest and of over $1,700,000 on account of Indians. There still remains an excess of expenditures over receipts, but the excess has fallen from about $45,300,000 in ten months of 1894–95 to a little over $13,400,000 in ten months of 1895–96.

The debt statement shows an aggregate debt, including certificates and Treasury notes offset by an equal amount of cash in the Treasury, amounting to $1,778,972,583, which represents a net increase of not quite $2,100,000 for the month. The interest-bearing debt shows an increase of $4,908,000 for the month, whereas the other items of debt show decreases, as does the amount of certificates and Treasury notes. The cash balance in the Treasury amounted on April 30 to $270,090,660, which represents a decrease of $1,551,087 for the month. Setting aside $100,000,000 for the gold reserve, the net cash balance amounted to $170,090,660.

DECREASING WORLD'S AVAILABLE WHEAT.

The total quantity of wheat in the United States and Canada, both coasts, on the 1st instant amounted to 83,572,000 bushels, a smaller quantity than had been held at a like date since May 1, 1892, when it was much less, only 51,870,000.

Details of stocks of wheat available, both coasts of the United States, together with those in Canada, on May 1, as reported to BRADSTREET'S, are contrasted with those on like dates in preceding years as follows:

	East Rockies.	*Pacific coast.*	*Totals.*
May 1, 1896	80,390,000	3,182,000	83,572,000
May 1, 1895	80,454,000	10,150,000	90,604,000
May 1, 1894	82,085,000	9,378,000	91,463,000
May 1, 1893	95,710,000	3,537,000	99,247,000
May 1, 1892	49,382,000	2,488,000	51,870,000
May 1, 1891	33,662,000	4,211,000	37,873,000
May 1, 1890	33,327,000	3,828,000	37,155,000
May 1, 1889	34,363,000	1,750,000	36,113,000

The enormous increase in the total quantities of available wheat in the United States on May 1 in late years as compared with the quantities so held on May 1 in 1889, 1890 and 1891 is made plain in the foregoing table, available stocks on the date named in recent years being about two and one-half times what they were at the periods mentioned in years specified.

The decrease in available supplies east of the Rocky mountains during April must be characterized as disappointing, it being a little less than in April last year, and, although larger than the decrease in 1894 and 1893, it is again less than in April, 1892. When stocks on both coasts are considered, the total falling off last month is seen to be 10,727,000 bushels, as compared with 11,148,000 bushels in April, 1895, 6,904,000 bushels in that month in 1894, 9,282,000 bushels in 1893, and as contrasted with 10,468,000 bushels decrease in April, 1892.

Available stocks of wheat in the United States increase gradually from July until about the close of December, when they begin to decline, and continue to do so, generally, during the following six months, or until July again. During the ten completed months of the cereal year ending with April 30 last there have been six months of increases and four of decreases. During the latter half of the last calendar year, when wheat stocks were accumulating, the net gain east of the Rocky mountains during that period was 44,110,000 bushels, as compared with 48,457,000 bushels in the like six months of 1894. During the previous four months the decrease was only 17,359,000 bushels, as compared with 33,253,000 bushels in January, February, March and April, 1895. The decrease in the last four months, therefore, has been only about two-fifths of the increase in the preceding six months, while in the like four months of 1895 the decrease was two-thirds of the increase between July 1 and December 30, 1894.

In this feature of the movement of available stocks of wheat is found the relatively unfavorable situation. It was confidently believed that reductions of stocks would be heavy and rapid beginning with January last. They have been little more than one-half of what they were in the first four months of the last calendar year, and a trifle smaller than in the first four months of 1894, and noticeably smaller than in the like period of 1892.

Combining stocks of available wheat east and west of the Rocky mountains, it appears that the decrease during the past four months amounts to 21,293,000 bushels, compared with a net increase of 44,677,000 bushels in the latter half of the calendar year 1895, a four months' decrease of a little less than one-half of the increase in the preceding six months. In the like four months of 1895 the falling away in available stocks, both coasts, was 36,412,000 bushels, compared with 53,506,000 bushels increase in the preceding six months, a falling off of in the first third of the preceding calendar year two-thirds as large as the increase in supplies during the next preceding six months. It is perhaps of interest, and may gratify to an extent those looking forward to the return of bullish influences, to note that the decrease of 21,293,000 bushels on both coasts during the past four months is compared with a decrease of only 18,792,000 bushels on both coasts during the like four months of 1894, and with a decrease of only 14,790,000 bushels during the corresponding period in 1893.

The total quantity of wheat available for immediate distribution in the United States and Canada, both coasts, plus the quantity afloat for Europe from all exporting countries, on May 1, added to available stocks in Europe, as reported to BRADSTREET'S, is as follows:

	East of Rockies.	*Pacific coast.*	*Europe and afloat.*	*Grand total.*
May 1, 1896	80,390,000	3,182,000	47,744,000	131,316,000
May 1, 1895	80,454,000	10,150,000	64,376,000	154,980,000
May 1, 1894	82,085,000	9,378,000	79,230,000	170,695,000
May 1, 1893	95,710,000	3,537,000	72,792,000	172,039,000
May 1, 1892	49,382,000	2,488,000	74,024,000	125,894,000
May 1, 1891	33,662,000	4,211,000	57,536,000	95,409,000
May 1, 1890	33,327,000	3,828,000	39,840,000	76,995,000
May 1, 1889	34,363,000	1,750,000	50,679,000	86,793,000

Stocks of wheat afloat for and in Europe from all exporting countries on May 1 are seen to have been 47,744,000 bushels, the smallest quantity of wheat in transit by water for and in store in Europe on a like date for eight years past. Adding available supplies on both coasts of the United States and Canada to those afloat for and in Europe, we have the grand total 131,316,000 bushels available on the date named, as compared with 154,980,000 bushels on May 1, 1895, 170,695,000 bushels on May 1, 1894, 172,039,000 bushels on that date in 1893, and as contrasted with 125,894,000 bushels on May 1, 1892, and with similar totals on May 1 in preceding years.

The shrinkage in American, Canadian, afloat and European stocks of available wheat on the 1st instant as compared with a year ago is, therefore, 23,664,000 bushels; as compared with two years ago it is 39,379,000 bushels, and with three years ago it is 40,723,000 bushels. On the other hand, as compared with May 1, 1892, preceding accumulations specified are 5,422,000 bushels larger.

The decline in stocks of wheat afloat for and in Europe has had an encouraging effect from the traders' point of view, in that American, Canadian, afloat and European stocks show a decrease for April of about 13,000,000 bushels, compared with a decrease of only 8,000,000 bushels in April, 1895, 5,000,000 bushels in April, 1894, and 6,000,000 bushels in April, 1893. The decrease in that month of 1892, however, was 17,000,000 bushels, and in 1891 4,400,000 bushels, while in 1890 there was an increase of 2,000,000 bushels.

It is worth noting at this time that what may be regarded as the world's available supplies of wheat were nearly as small on May 1, 1896, as on July 1, 1895, and much smaller than on July 1, 1894 or 1893. Between May 1 and July 1, 1894, like supplies of wheat fell away 24,000,000 bushels, and between those dates in 1895 they declined similarly—about 24,000,000 bushels. Should this ratio of reduction of stocks of wheat here, afloat and in Europe be maintained during May and June, 1896, it would push the grand total held on July 1 next down lower than it has been for four years past.

OUR EXPANDING EXPORT TRADE.

The amount of attention which our export trade in manufactured goods is receiving is abundant testimony, if any were needed, to the fact that while the discussion as to the best methods of developing foreign trade has been most active, the agents of American manufacturers have been diligently proceeding to develop this very trade. A review of the import and export trade of the United States for 1895, published in BRADSTREET'S, February 15, said, in part:

"The exports of products of agriculture were smaller in 1895 than in any previous year since 1888, while exports of manufactured goods were the largest for any year on record, pointing to the fact, already remarked upon in these columns, that while our exports of products of the farm have shown a steady shrinkage of late years, our exports of manufactured goods, though of smaller relative volume, have shown a gratifying increase. While our exports of products of agriculture fell off from 71 per cent. to about 67.5 per cent. of our total exports, in the past two years the shipments

TOTALS OF AVAILABLE WHEAT IN THE UNITED STATES, CANADA AND EUROPE AND AFLOAT FOR EUROPE.

* Decrease. † Increase.

of manufactured goods increased from 22 per cent. to nearly 25 per cent. of our total exports.

"That this increase in the export of manufactured goods is not a temporary feature, but has come to stay, seems evident from the gain shown over the years 1893 and 1894, when prices were at their lowest, and, while prices in 1895 advanced sharply, no perceptible influence seems to have been exerted upon the total volume of export trade in manufactured articles. Among the items of export showing increases in 1895, manufactured articles figure largely. Iron and steel, leather, mineral oils, chemicals and drugs, machinery, naval stores, oil cake and wood, all showed increases."

All obtainable evidence points unmistakably to the fact that the tendencies toward expansion above noted have been very generally maintained during the first quarter of the present year. The following table illustrates the tendencies above mentioned:

	Value manufactures exported.		*Proportion of manufactured goods to all exports.*	
	1896.	1895.	1896.	1895.
January....	$18,732,547	$14,101,738	21.89	17.55
February...	19,250,280	14,274,318	22.60	22.24
March	19,125,785	15,576,786	25.85	24.48
Totals . .	$57,108,612	$43,952,842	24.25	22.11

The total exports of manufactured goods for the first three months, it will be seen, were $57,108,612, a gain over the first quarter of 1895 of 30 per cent.

For the nine months ending March 31 the total exports of manufactured goods aggregate $163,187,927 out of total exports of $664,286,000, or 24.57 per cent., whereas last year, in the same period, the exports of manufactures aggregated only $132,405,784 out of a grand total of $612,964,271, or only 21.60 per cent. Calculations of the effect upon the export trade of the entire fiscal year of a continuance of above conditions are of interest in this connection. Estimates given in press dispatches from Washington are that this proportion of increase, if maintained until the end of the fiscal year on June 30, would result in manufacturing exports of $217,000,000 out of total exports of 885,000,000. This would represent a total of manufacturing exports $32,000,000 larger than ever before attained in the commercial history of the country.

Naturally enough, the largest increases have been noted in those lines of manufactured goods in which Americans are widely celebrated, but the manifest of a ship recently sailing from this port to South Africa reads like a roll call of the products of almost every American industry. The following table, compiled from a report of the Bureau of Statistics of the Treasury Department, illustrates a few of the directions in which an enlarged export trade manifested itself during February this year:

Agricultural implements.	Malt liquors.
Blacking.	Marble and manufactures.
Brass goods.	Matches.
Bricks.	Musical instruments.
Brooms and brushes.	Nickel.
Candles.	Oil cake and meal.
Carriages and street cars.	Oils, animal.
Cartridges.	Oils, essential.
Casings for sausages.	Oils, mineral.
Chemicals, drugs and dyes.	Oils, vegetable.
Cigars and cigarettes.	Oleomargarine.
Clocks and watches.	Paints and colors.
Coke.	Paper.
Copper.	Plated ware.
Cotton goods.	Quicksilver.
Cycles.	Rice.
Fish.	Rubber and manufactures.
Flax, hemp and jute mfrs.	Soap.
Fruits, canned.	Starch.
Glass and glassware.	Stationery.
Glucose.	Stereotype plates.
Glue.	Straw manufactures.
Ink.	Sugar, refined.
Instruments.	Toys.
Iron and steel and mfrs.	Trunks and bags.
Machinery.	Varnish.
Nails.	Vinegar.
Sewing machines.	Wood and manufactures.
Lamps.	Wool and manufactures.
Leather and manufactures.	

The above list, it will be seen, is a very comprehensive one, and in every case the exports this year in February exceeded those of last, while for the elapsed portion of the present fiscal year a majority of those items showed an enlarged export.

It is a notable and encouraging fact that every one of the grand divisions of the world took an enlarged amount of our exports in February, 1896. Specially notable in the enlarged takings, however, are many of the countries south of this country, notably Mexico and Central America, the West Indies, except Cuba, Argentina, Colombia, British Guiana, Uruguay and Venezuela. Other countries taking larger quantities of American manufactures were British Africa, Australia and the Hawaiian Islands.

CIRCULATION INCREASING.

Statistics of money in circulation show a net increase of $11,377,619 for the month of April. The most notable item of increase was $8,313,400 in gold coin. Other increases were $5,060,899 in United States notes, $2,397,150 in national bank notes and $1,801,987 in silver certificates. The decreases were $1,190,390 in standard silver dollars, $480,796 in subsidiary silver, $186,690 in gold certificates, $2,807,941 in Treasury notes and $1,530,000 in currency certificates. The statement showing the changes in money and bullion in the Treasury show a net decrease of $6,572,676 for the month. The principal decrease was $7,236,209 in gold coin. Other decreases were $204,059 in Treasury notes of 1890, $5,060,899 in United States notes and $1,247,646 in silver bullion. The increases were $2,690,390 in standard silver dollars, $212,629 in subsidiary silver, $476,160 in national bank notes and $3,379,179 in gold bullion.

The following table shows in detail the amount of money coined or issued, the amount in the Treasury, and the amount in circulation on May 1:

	General stock coined or issued.	*In Treasury.*	*Amount in circulation May 1, 1896.*
Gold coin	$589,820,494	$135,594,838	$454,225,656
Standard silver dollars.	427,780,916	374,187,554	53,602,362
Subsidiary silver	77,048,510	15,459,003	62,489,507
Gold certificates.....	43,817,469	764,910	43,052,559
Silver certificates.....	350,417,504	11,578,091	338,834,413
Treas'y notes, act July 14, 1890.....	133,069,280	32,148,255	100,921,025
United States notes....	346,681,016	109,331,635	237,349,381
Cur'y cert'f's, act June 8, 1872.....	33,295,000	365,000	32,930,000
National bank notes...	224,189,337	7,587,158	216,602,179
Totals.....	$2,227,023,526	$687,016,444	$1,540,007,082

The decreases as compared with the corresponding date last year were over $25,200,000 in gold coin, a little over $300,000 in standard silver, nearly $5,800,000 in gold certificates, over $20,500,000 in Treasury notes of 1890, over $19,500,000 in United States notes, and nearly $3,900,000 in currency certificates of 1872. The increases were over $2,600,000 in subsidiary silver, over $15,000,000 in silver certificates and over $13,500,000 in national bank notes. The total circulation on May 1 amounted to $1,540,007,082, which represents a decrease of over $44,000,000 as compared with the corresponding date last year. The circulation per capita, as calculated by the Treasury experts, on the basis of an estimated population of 71,136,000, on May 1, amounted to $21.65. This represents an increase of 12c. for the month, but a decrease of $1.32 as compared with the corresponding date last year.

National bank circulation on April 30 amounted, according to the monthly report of the Comptroller of the Currency, to $224,101,345, which represents an increase of $2,873,540 for the month and of $14,472,422 for the year ending therewith. The portion of the circulation based on the deposit of bonds amounted to $203,403,209, an increase of $3,680,224 for the month and of $20,868,915 for the year ending therewith. The portion of the circulation secured by the deposit of money amounted to $27,094,599, which represents a decrease of $806,694 for the month and of $6,396,493 for the year ending therewith.

THE LAKE SHORE REPORT.

It has often been remarked that the Lake Shore & Michigan Southern Railway occupies a unique position among American railroad systems. This refers not so much to its excellent physical condition as to the remarkable conservatism of its financial management. Year by year enormous amounts of earnings have been put into the property itself, although its sinking funds have been kept up with the utmost exactness, and everything has been done to strengthen its position against the rapidly approaching maturity of the 7 per cent. bonds, which commence to fall due in 1898. There being about $45,000,000 in all of various issues at that rate, which will be due between 1898 and 1906, the unquestioned ability of the company to refund them at 4 per cent. would involve a saving in annual interest charges of $1,350,000, while the possibility that they can be replaced at 3 per cent. (which is by no means unlikely in the case of a company with such a standing in the borrowing market) would mean a reduction of about $1,800,000 from the present annual fixed charges of $3,420,000. At the same time that the company has, year by year, prepared itself for such a gigantic conversion scheme, it has been singular, in the fact that it has contracted no fresh obligations, and, indeed, has added nothing to its capital account since the year 1883. It is these features, rather than the regular payment of the very moderate dividends, which justify the high price the stock has maintained even through the hard times, and which caused Lake Shore, rather than New York Central, to be regarded as chief among the railroad properties with which the name of Vanderbilt is associated.

The annual report for 1895 is in keeping with the past history and settled policy of the Lake Shore Company. The figures presented compare as follows with those of the two preceding years:

Year.	1895.	1894.	1893.
Gross earnings	$21,016,035	$19,557,870	$23,685,932
Operating expenses.....	14,568,419	13,186,067	17,123,915
Net earnings	$6,447,815	$6,371,802	$6,562,019
Fixed charges	3,419,500	3,402,862	3,305,375
Surplus	$3,028,314	$2,968,939	$3,196,643
Dividends.....	2,967,990	2,967,990	2,967,990
Surplus	$60,324	$949	$228,653

Compared with 1894 the items show the following changes:

	Increase.
Gross earnings.....	$1,458,165
Operating expenses.....	1,382,152
Net earnings	76,013
Fixed charges	16,638
Surplus.....	59,375

According to this the amount earned and applicable to dividends on stock were equal to 6⅛ per cent., against 6 per cent. in 1895 and nearly 6½ per cent. in 1894. The feature of the report, however, is the heavy increase in gross earnings and the equally marked augmentation of operating expenses, the proportion of the working cost to gross revenue being 69.32 per cent., against 67.42 per cent last year and 72.29 per cent. in 1893. This increase in operating expenses was, however, devoted to improvement and equipment, the latter item absorbing $1,650,954, including the purchase of a large number of new locomotives and cars. But for these expenditures the earnings, after payment of charges, would have been equal to over 9 per cent. on the stock.

There is little else in the report calling for comment, except that while the tonnage was the largest in the history of the road, the rates were the lowest. These features may be exhibited in the form of the following comparative table, covering the record of three years:

	1895.	1894.	1893.
Tonnage	14,382,641	12,142,256	13,142,844
Rate per ton	.561c.	.572c.	.587c.
Passengers	4,697,175	4,542,924	5,311,086
Rate per mile.....	2.139c.	2.229c.	2.092c.

Freight earnings, however, increased $3,313,150, or 10 per cent., and passenger earnings $91,730, or 2 per cent., while the freight tonnage was 2,240,385 tons, or 18 per cent. larger, and the increase in the number of passengers carried was 84,250, or 1.85 per cent. The revenue per ton per mile was, nevertheless, the smallest the road has ever known, the figures (.561c. per ton per mile) comparing with 1½c. per ton per mile in 1870.

Nevertheless, the Lake Shore figures are eminently satisfactory, and show that the skill and conservatism of railroad managers, when pr perly applied, is adequate to contend with the new conditions which have asserted themselves in the field of transportation.

LIFE INSURANCE IN NEW YORK.

A comprehensive review of the business of life insurance companies in New York state for the year 1895 is presented in the annual report of Superintendent Pierce. From the figures given, it appears that the gross assets of life insurance companies doing business in the state on December 31 last were $1,142,419,926, an increase of $86,088,243 as compared with the previous year. Of this amount New York state companies had $689,420,488, an increase of $53,068,835, and companies of other states $452,999,437, an increase of $33,019,408. The aggregate of premium notes and loans showed an increase of $4,477,302 during 1895, while deferred and uncollected premiums increased $394,726. The total liabilities of the several companies, excepting $9,570,500 of capital stock, were $982,669,752, an increase during the year of $66,078,614. The liabilities of New York state companies, as reported, were $588,467,641, and those of companies of other states $394,202,111. The gross divisible surplus was: New York state companies, $100,952,847; companies of other states, $58,797,326; aggregate, $159,750,174.

The aggregate receipts of the New York state companies for the year amounted to $165,940,315, an increase of $4,225,351 as compared with the preceding year, while those of companies from other states amounted to $100,956,887, an increase of $6,047,372, making the gross receipts $266,897,202, and the gross increase over the receipts of the preceding year $10,272,724. The excess of receipts over disbursements for 1895 was $81,124,300, while for 1894 it was $78,761,144. The total premium receipts for 1894 were $205,132,043; for 1895, $215,199,302. The disbursements for the year were $185,772,902, an increase of $7,909,569 compared with the preceding year; $84,791,621 was paid for claims; $22,889,492 for lapsed and surrendered policies; $15,297,603 in dividends to policyholders; $741,312 in dividends to stockholders; $29,804,165 for commissions; $15,571,620 for salaries and medical examiners' fees, and $16,677,085 for miscellaneous purposes. It appears that $122,978,718 was paid to policy-holders, while the cost of management, including dividends to stockholders, was $62,794,184. During the year the New York state companies issued 207,936 policies, insuring

$524,523,019, and terminated 153,706 policies, insuring $427,985,360. The companies of other states issued 158,629 policies, insuring $340,312,515, and terminated 98,173 policies, insuring $224,919,127. The aggregates of the above were 366,565 policies issued, insuring $864,815,534, and 251,879 policies terminated, insuring $652,904,487. It appears that the companies issued 30,278 policies less last year than the year before, and decreased the amount of insurance written $120,704,499. There were 42,745 less policies terminated in 1895 than in 1894, and $184,734,736 less insurance. The above figures do not include the industrial business. Compared with 1894 the business of the companies shows that the increase of policies for 1895 was 114,686, and of insurance $211,911,047.

One fact of interest brought out in the report is that during the last three years the insurance department has examined all of the domestic life insurance companies with two exceptions, and the examination of one of these companies was almost completed at the date of the report. Such a general examination of the condition of the companies had not been made before since 1875. The examinations have not been instituted solely by the independent action of the department, having been in many cases requested by the companies themselves, who have desired that their affairs be looked into by the state and the result made public. With the exception of one company, now in the hands of a receiver, the superintendent says, the examinations have established the fact that the domestic companies have been well managed, and that they are entitled to the confidence of their policy-holders. The opinion gained by the superintendent as the result of these investigations leads him to conclude that there is little need for subjecting them to investigation at intervals of three or even five years, unless some special occasion should arise requiring an examination generally into the condition of a particular company.

Attention is called to the fact that the number of applications for insurance, either rejected or held in abeyance by life insurance companies, is very large, and that many of the rejected applicants are not, properly speaking, impaired or under-average lives. Regarding this class of cases, the superintendent points out that the business of insuring under-average lives has for many years been carried on by the British life insurance companies in connection with the insurance of selected lives, and he says that there seems to be no reason why this class of insurance could not be undertaken by our life insurance companies now insuring selected lives only. Companies have incorporated in other states to do this business, and one of them, a Pennsylvania corporation, has recently been admitted in New York. The British offices, through the transaction of this business, Superintendent Pierce says, have for some time past been able to formulate a reliable mortality experience, and he adds that there would seem to be no reason why this experience could not be utilized by such American companies as may see fit to furnish insurance to a class of persons now unable to obtain it.

Naturally enough, the report refers to the exclusion from Prussia of three of the best known American insurance companies. The superintendent expresses the view that the refusal of Prussia to permit the companies mentioned to continue business there has been arbitrary and not based on any reasonable grounds, and, while deploring the occasion for the enactment of retaliatory legislation, he commends the action of the legislature of New York in making it compulsory upon the head of the insurance department to retaliate against companies from countries which have arbitrarily excluded American companies. It appears that already under the law one Prussian insurance company has been refused permission to transact business in the state, and the certificates of two others previously licensed have not been renewed. The situation is a regrettable one.

SOUTH AFRICAN DEVELOPMENTS.

The attempt of Mr. Cecil Rhodes and his coadjutors to erect a gigantic corporation modeled on the old East India Company has met with complete and merited failure. The Jameson raid on the Transvaal resulted in the prompt withdrawal by the imperial authority of all rights of the British Chartered Company of South Africa to exercise military control within its territories, and the events of the past fortnight have made it difficult for the English government to allow the company's charter to continue in force. The London stock market has discounted this probability by a sharp drop in the market quotation for Chartered Company shares, and the utterances of various public men in Great Britain leave little doubt as to what is expected of the Cabinet in this juncture. President Kruger of the Transvaal, it is scarcely needful to remark, remains absolute master of the situation. The possession of the incriminating telegrams showing that the so-called Johannesburg reform committee were in direct communication not only with Dr. Jameson but with Rhodes, and the further developments showing that the Chartered Company was responsible for and provided funds and munitions for last winter's attempted revolution in the Witwatersrand, have placed the Transvaal authorities in an unassailable position—one in which public opinion even in England itself would sustain them—while it leaves no escape from the conclusion that the Chartered Company will have to receive adequate punishment for the sins of its leading members. In other words, it has been found that administrative functions cannot with safety be intrusted to a corporation of this character, with the danger of Great Britain being involved in serious troubles through the rapacity of private individuals.

The events to which reference has just been made seem to end a chapter in the history of South African development. That it will materially change the tendency of that development may, however, be doubted. Thus far, of all the nations which have indulged in a scramble for the partition among them of the Dark Continent, Great Britain alone has shown the capacity to develop and utilize its acquisitions. The opposition of the Afrikander Boers to English aggressions and interference would be even more pronounced in the case of some of the would-be protectors of their independence. As already indicated, public opinion in England is not unjust toward the Boers, even if the disposition is to consider that the Uitlanders have been badly used and unduly oppressed. News dispatches in the daily press and the intemperate utterances of some organs of British opinion like the London *Times* might convey a contrary impression. The financial press, which more clearly reflects the views of the financial interests which have done so much to develop South Africa, however, takes a decidedly different tone, and recognizes that, while England's supremacy in the region in question must be upheld, the Boers are in a majority, and their feelings will also have to be considered to the fullest extent before the desirable settlement is arrived at. The events of the fortnight have brought this fact home, and the sacrifice of the Chartered Company appears to be a necessary preliminary to the establishment of a better understanding.

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

A more than usually interesting report regarding the operations of the Patent Office has been submitted to Congress in the annual report of Commissioner Seymour for the year ending December 31 last. It appears that the aggregate receipts during the year were $1,245,247 and the expenditures $1,084,496; the total balance in the Treasury to the credit of the patent fund at the beginning of this year was $4,529,886. In every year since 1861 there has been a surplus over all expenditures, and in every year but eight since the foundation of the Patent Office on its present basis, in 1836, there has been a surplus. During the year there were issued 21,998 patents and designs, exclusive of 59 reissues and inclusive of 2,049 issued to foreigners; 1,829 trade-marks and three prints registered, and 46,899 applications filed for patents, trade-marks, labels, prints, etc., requiring investigation and action. There were also 12,345 patents expired and 3,428 patents forfeited for non-payment of final fees. In the United States, the states leading in the number of patents issued to its citizens are New York, 3,539; Pennsylvania, 2,270; Illinois, 1,876; Massachusetts, 1,793, and Ohio, 1,423, while Arizona territory is at the foot of the list. In proportion to population, however, Connecticut leads the list with one to every 927 people, District of Columbia one to 1,047 and Massachusetts one to 1,248; Mississippi is at the foot with one to every 34,854, with South Carolina on the basis of 28,076 next. Prior to 1870 the United States issued nearly half as many patents as all foreign nations combined. Since 1870 the United States has issued more than half as many as all foreign nations combined, and in the aggregate of patents issued in both periods the United States issued more than half as many patents as all foreign nations combined. During the past twenty-five years 25 inventors had more than 100 patents granted to them. In these, Thomas A. Edison leads with 711, Elihu Thomson, the electrician, coming next with 394.

CURRENT BUSINESS NEWS.

Industrial.

The president of the Adams Express Company says regarding the report of a threatened general strike of the employees of that company: "The whole thing amounts to eight porters quitting work because they were dissatisfied with the 'hours of work' per day. Their places were immediately filled by other unskilled men. There has been no reduction of wages affecting these men. All talk of a general strike is groundless."

Only about 125 men went to work one day this week at the Newport News shipyard under the clock system. The shipyard authorities have declined to say what action they will take in the matter.

Arrangements have now been perfected for the thirty-third meeting of the American Society of Mechanical Engineers, which is to be held May 19 to 22.

Four hundred union plumbing, gas and steam fitters went on strike in Kansas City this week for eight hours' work and the same wages heretofore paid them for nine hours.

The reported consolidation of the Coats and Clark thread companies involves several million of dollars and thousands of workingmen.

The Milwaukee street railway employees struck this week for an advance in wages and for recognition of their union. Every line in the city was tied up.

The seventh annual convention of the Textile Workers of America has been in session in Lawrence, Mass.

Such of the 1,500 painters of Boston as had not previously secured the eight-hour workday went to work on the shorter day on the 1st instant. There was no opposition to the change.

An exchange states that "the knitting mills have been directly helped by the bicycle craze more than any other industry. An entirely new class of hosiery has been created, which has met with great demand and on which a fair profit can be made. Bicycle hose of various kinds are now a necessary part of a hosiery stock. In addition to hosiery and sweaters, the knit goods industry has profited by the increasing demand for knitted underwear, equestrian tights, leggings, knitted caps, belts and gloves. These garments have attracted many manufacturers to this line."

The Chattanooga *Tradesman* says: "The textile industry is active in all parts of the south, but there is a need of improvement in both demand and prices. Stocks are accumulating somewhat."

During the year ending April 30 the mills of Minneapolis produced 12,040,215 barrels of flour. One mill alone produced over 4,000,000 barrels. These figures break the records. The statistician of the Crosby Company stated that of the Minneapolis production for the year shipments had gone into every state of the Union and into every country of Europe.

In Newark, N. J., this week 1,100 carpenters struck for an advance from $2 to $2.75 per day, uniform scale, and eight hours on Saturday. It is said that all other trades unions will strike in sympathy if the carpenters do not win within the week.

Washington advices say that it has been found that the proposals of the companies offering to furnish armor to the government will make this material cost the government about $52 per ton less than the price paid under the contract of 1893, the last made. This includes the Harvey treatment of the plates, while the bids of 1893 included simply the nickel-steel plate, without hardening.

In his address to the National Electric Light Association at New York city this week, President Wilmerding said the advance in electricity since the World's Fair, and particularly in the last twelve months, has been wonderful. The Röntgen discoveries held the first rank, but Tesla's inventions were almost as grand. The transmission of high-power currents for long distances, as illustrated by the Exposition just opened, he said, promised to be of the greatest commercial and mechanical utility. He predicted that electricity would soon replace steam power on all the elevated roads, for it had been shown in Chicago that the electric elevated system could be operated at half the cost of steam roads. While electric industries everywhere were forging ahead, not the least important developments had been made in lighting. Since seventeen years ago, when the first central station had been erected, $300,000,000 had been invested in public electric light plants in this country, 200 of them under municipal control and 2,000 of them owned and managed by corporations. A great advance, he said, had been made since the last convention in the direction of having fixed standards and rules for electric construction and wiring.

Commercial.

A Chicago judge (Judge Horton) decided last week that bucket-shops are as legitimate as the Board of Trade, and quashed indictments against a number of persons charged with being proprietors of or employed in bucket-shops. The grand jury, however, has ignored Judge Horton's decision, and issued 149 more indictments against proprietors of bucket-shops.

As a practical step towards the establishment of more intimate trade relations between the United States and the most important South American nations, the National Association of Manufacturers proposes to organize a party of representative American business men for the purpose of visiting the Argentine Republic, the republic of Uruguay and the United States of Brazil in response to invitations which have been extended by the governments of those countries, and by which the visitors will be considered as the guests of the nations and will be honored as such. The party is now in process of formation, and the arrangements for the trip are now being made. The tour will cover the months of July, August and September, which constitute the most comfortable and most pleasant period of the year for such a journey. These months form the southern winter season, when the temperature remains steady around 60 degrees in the Argentine and in Uruguay, and when there is no yellow fever in Brazil. It is an interesting commentary upon the present condition of transportation facilities between the United States and South America that this party will proceed to Pernambuco, the first port reached in South America, by way of Southampton, Lisbon and the Canary Islands.

The Seattle *Trade Register* says: "A boom article from Tacoma to the *Market Record* of Minneapolis, from which BRADSTREET'S made quotations April 11, was incorrectly credited to the latter journal by a Tacoma paper."

Messrs. Clapp & Co., New York, say: "Flour is now reported in ample supply in all the world's markets and hard to sell at quotations. The stock of both wheat and flour in the west is larger than two years ago, and only fractionally less than a year ago. France now reports a probability of having fifty odd millions for export in place of importing on an average about 45,000,000 bushels."

Reports to BRADSTREET'S are that the maple sugar crop in New York state is reported to be well below the average this year, Scoharie county reporting only 40 per cent. of an average during the past twelve years. Advices from Sullivan county are that maple sugar groves there are gradually being abandoned, and the production of maple syrup and sugar correspondingly decreased. Maple sugar counties in New Jersey are said to be practically supplying only the local demand. The supply of maple sugar shipped from Ulster county, New York, this year is said to be small compared with that in preceding years. The Vermont crop is about 50 per cent. of "a good run" this year, or 60 per cent. to 70 per cent. of an average year, although it is larger than last year.

Financial.

The American Cotton Oil Company has declared the regular semi-annual dividend of 3 per cent. on its preferred stock, payable June 1. Books close May 15 and reopen June 2. It has been decided that it will be for the best interest of the stockholders to make no further redemption of debenture bonds at present. The payment of 10 per cent. premium involves a needless outlay, and, in view of the fact that the bonds have only four and one-half years to run, it is believed that more favorable arrangements can be made later on.

The manager of the San Francisco Clearing House writes to BRADSTREET'S: "I noted your article in your journal, April 25, on the irregular methods of making up the Clearing House figures of the clearings. We only give the totals of amount brought to the Clearing House, and we do not have any checks given in settlement of balances that come in afterwards to swell the figures of clearings. Balances are paid in cash."

The Bell Telephone stockholders in Philadelphia meet May 29 to vote upon the proposed increase of capital stock from $1,000,000 to $2,000,000, the increase to be for extensions and improvements.

A Boston dispatch says it is understood that the "gas war" in that city has been settled by the purchase of the Brookline Gas Company by the Bay State Gas combination. The price is said to have been $5,000,000.

The New York city Clearing House banks have kept $36,000,000 gold on deposit in the vaults of the Mercantile Trust Company, but this sum is now removed to the vaults of the new Clearing House building.

The following securities were sold at auction this week at New York:

5	Shares Importers' and Traders' National Bank, $100 each	540
50	Shares Playa de Oro Mining Company (of Playa Rica, Ecuador), $100 each	13⅜
1,000	Shares Keely Motor Company of New England, represented by stock powers duly executed by the officers of the company	$150 for lot
$10,800	New York City 6% dock stock, due November 1, 1905	121½
$10,000	New York City 7% consolidated stock, due December 1, 1896	101¼
150	Shares Pennsylvania Coal Company	336
100	Shares Consolidated Gas Company	161⅝
$30,000	State of Tennessee 3% settlement bonds, due 1913	83
$10,000	Nebraska Loan and Trust Company 6% debentures, Series 4, due June 1, 1898	65
$10,000	Council Bluffs Water Works Company 1st mortgage 6% bonds, due 1906	91½
$1,000	Salt Lake City 5% water bond, due 1911	100
8	Shares New Jersey Zinc and Iron Company	81
$470	Atlantic Mutual Insurance Company scrip, viz., 1891 to 1894	100¾
$5,000	Fort Scott Water Company, of Fort Scott, Kansas, 6% gold bonds, due 1912, lot	$500
$13,500	Denver Union Water Company 1st mortgage 20-year 5% gold bonds, due 1914	70
$7,520	State of Louisiana 3% bonds (known as Baby Bonds)	25
180	Shares National Citizens' Bank	130
$5,000	Hecker-Jones-Jewell Milling Company 1st mortgage 6% gold bonds, due September, 1922. Interest March and September	98½
25	Shares The Maxim Powder Manufacturing Co.	9
20	Shares The John Good Cordage & Machine Co.	5
50	Shares Atlantic Trust Company	178
73	Shares Brooklyn Bank (hypothecated)	160
180	Shares Northern Pacific Railroad Co., common	1⅛
$3,000	Northern Pacific Railroad and Land Grant consolidated 5% gold mortgage bonds	48¾
5	Shares Nineteenth Ward Bank	123¼
15	Shares Gold and Stock Telegraph Company	109
7	Shares Journeay & Burnham, pfd., $100 each	98
$4,000	New York Equitable Gas Company consolidated 5% bonds, due 1932. Coupons March and Sept	113⅝
$24,000	New York & Texas Land Company, L'td., scrip	64
$3,000	Louisville, New Albany & Chicago Railroad Company consolidated 6% bonds, due 1916	100
$6,000	Texas & Pacific Railroad Company 1st mortgage 5% bonds, due 2000	89
$1,000	Minneapolis Street Railway Company 1st mortgage 7% bond, due November, 1910	108½
108	Shares Metropolitan Trust Company	287

The Comptroller of the Currency has declared a second dividend of 10 per cent. out of the assets of the National Bank of Middletown, Pa.

The New York Stock Exchange "has struck off from the list Northern Pacific second, third and consolidated mortgage, dividend certificates and collateral trust notes, and the reorganization receipts alone are now dealt in."

The all-rail east-bound shipments of dead freight from Chicago last week were 63,830 tons, against 61,899 tons the previous week and 53,285 tons the corresponding week of the previous year.

The Chicago & Alton Railroad Company has declared a quarterly dividend of 2 per cent. on both its common and preferred stocks, payable June 1.

The report of the Michigan Central for the fiscal year ending December 31 shows:

	1895.	1894.	1893.
Freight	$9,177,964	$8,314,026	$9,244,355

Miscellaneous income not included. Taxes not deducted.

The Pennsylvania Railroad has declared a semi-annual dividend of 2½ per cent. on the capital stock, payable in cash on and after May 29.

The New York, Chicago & St. Louis Railroad Company reports for the year ended December 31:

	1895.	1894.	*Changes.*
Gross earnings	$6,317,950	$5,629,239	Inc. $688,711
Net earnings	1,141,308	964,252	Inc. 177,056
Fixed charges	860,000	954,925	Dec. 94,925
Surplus	$281,308	$9,327	Inc. $271,981

Chicago telegrams announced that the Joint Traffic Association has arranged the schedule of charges for transfers of cars laden with grain at that point, the maximum charge being $1.50 per car on oats and $1 on wheat, corn and other grains.

The Louisville, St. Louis & Terre Haute Railroad has been sold under foreclosure proceedings at Owensboro, Ky., to the reorganization committee for $300,001.

Legislative.

The House Committee on Pacific Railroads has ordered a favorable report on the bill permitting the bondholders of the Atlantic & Pacific Railway Company, who have purchased the property of the old company, to reorganize as a new company.

The House Ways and Means Committee has ordered a favorable report on a bill allowing the bottling of distilled spirits in bond under regulations of the Treasury Department.

The House Committee on Labor has ordered a favorable report on a bill to protect free labor from competition with convict labor by restricting the sale of convict-made goods to the states in which they are produced.

A bill has been passed by the House appropriating $75,000 to defray the expenses of the commission to be appointed under the recent treaty with Great Britain to determine the claims for damages for the seizure of the alleged Behring sea seal poachers.

The House has voted against the engrossment of the measure to give Alaska a delegate in Congress.

Foreign.

The Berlin Industrial Exhibition was formally opened on May 1.

The Swiss National Exhibition was opened at Geneva on May 1.

Taking 100 as the average price of wheat in 1860, it was up to 116 as late as 1882 in the United States, the figures for 1891 being: United States 88, England 74 and Germany 82. Other prices closely follow. The average value of 22 articles of food, clothing and shelter that were worth 100 in 1860 averaged for 1891 in the United States 84, England 81, Germany 80, France 79.

Messrs. Neill Bros. are still bullish as regards the prospects of cotton, but they are greatly worried because the jingoism of the British government, and the course of political events in general, "exercise a depressing effect on enterprise and speculation."

Signor Colombo, minister of the Italian Treasury, has made a financial statement in which he said that the situation was satisfactory. He added that the budget deficit of 1896–97, amounting to 1,000,000 lire, would be readily covered by a slight increase in the revenue. The statement made a favorable impression in the Chamber of Deputies. Everybody recognized that the improvement in the national finances was due to ex-Minister Sonnino, whom a number of the deputies congratulated.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Constitutional Law—Taxation—Debt.

The Supreme Court of Minnesota held, in the recent case of State vs. Moffett et al., that that part of General Statutes, 1894, section 1526, which authorizes a person liable to taxation, when making up the amount of credits which he is required to list, to deduct from the gross amount thereof all his bona fide indebtedness, is constitutional.

Land—Trust—Creditors—Purchaser.

The Supreme Court of Georgia held, in the recent case of Reid et al. vs. McFerran, that where one who was in possession of land which he had conveyed in secret trust to another for the purpose of defrauding his creditors cut and sold timber from the land, an innocent purchaser of the timber in this contest with the fraudulent grantee had the right to show the facts in regard to the secret trust, under which the title to the land was held.

Mortgage—Note—Foreclosure.

The Supreme Court of Indiana held, in the recent case of Kane vs. Terrell et al., that one who takes a note and mortgage with the fraudulent intent of aiding the mortgagor to defraud his creditors cannot enforce a foreclosure of such mortgage, and that one who surrenders a note and mortgage for which she gave no consideration, and executes but does not acknowledge a release for the same, cannot foreclose such mortgage against a person who, by contract with the mortgagor, expressly undertakes to pay it.

Exemption—Personalty—Creditors.

The Supreme Court of Georgia held, in the recent case of Stowers vs. Matthews, that an exemption of personalty being void as to certain creditors for want of notice to them, it was the right of the head of the family to make another application for exemption, to give notice thereof to these creditors, and to have the same personalty exempted as to them, but that if, before the allowance of the second application, the applicant had sold and parted with the title to and possession of a portion of the property, although he had included the same in the second application, the exemption thereafter allowed was, as to the property thus sold, ineffectual and void as to such creditors.

Mechanic's Lien—Waiver—Credit.

The Supreme Court of Minnesota held, in the case of Flenniken vs. Liscoe et al., that a mechanic's lien is waived or discharged where the parties enter into a special agreement inconsistent with the existence of the lien, as, for example, by the laborer or material man extending credit to the owner beyond the statutory period for bringing an action to enforce the lien, and that this rule is not changed by the General Statutes of 1894, section 6243 (providing that the taking of a promissory note for labor and material shall not discharge the lien), where, by the terms of the note, the time of payment is extended beyond the date fixed by statute for bringing an action to enforce the lien.

Stocks—Executors—Sale.

The Supreme Court of Louisiana held, in the matter of the Succession of Henrietta Kaiser, that where executors have the administration of a succession composed entirely of stocks which have a market value, but fluctuate, and they sell the same at private sale in small lots for the interest of the succession, when a public sale would have had the effect of depreciating the value of the stocks by putting on the market large amounts at one time, they will not be held responsible for the loss in value estimated at the highest market quotations, when no demand has been made upon them by particular legatees, or the universal legatees, to pay the legacies, etc., for this purpose demand a public sale of the stocks by an order of court.

Guaranty—Promise—Agent's Authority.

In the case of Weikle vs. Minneapolis, St. Paul & Sault Ste. Marie Railway Company, recently decided by the Supreme Court of Minnesota, it appeared that the general manager and general freight agent of the defendant corporation requested plaintiff to ship certain hogs from Glenwood and Elbow Lake, Minn., to a third person at Hankinson, N. D., saying that if he did so, they would guarantee the payment to plaintiff of the price of the hogs. Plaintiff shipped the hogs, but the third person was unable or unwilling to pay for them and so informed the plaintiff, and thereupon the general manager and general freight agent, without plaintiff's knowledge or consent, had the hogs reshipped to Minneapolis, Minn., and demanded of the plaintiff that he receive and accept them at that point. The defendant made no charges for transporting the hogs and received no benefit or profit from the transaction. The court held that this promise of the manager and freight agent was strictly a guaranty of the debt of the third party and not an original undertaking on the part of the defendant, and that, as there was no express authority from the defendant to the manager or agent to make such a guaranty of payment, and as none could be implied because giving such guaranty was beyond the scope of their authority, the defendant was not liable.

Partnership—Note—Payment—Evidence.

The Supreme Court of Georgia held, in the recent case of Powell vs. Fraley, that where an action was brought against a partnership composed of two persons, and against one of them individually, on a promissory note upon which there was an entry of a payment made after the note had become barred by the statute of limitations, which entry was signed by one of the partners, the petition, in effect, also declaring upon the new promise evidenced by such entry, there was no error, so far at least as the defendant was concerned, in striking a plea alleging that he made the entry in question in consideration of an agreement that he was to be liable for only half of the amount of the note, nor was there any error committed in rejecting evidence offered in support of that plea.

Partnership—Note—Interest—Usury.

The Kentucky Court of Appeals held, in the case of The Warren Deposit Bank vs. Robinson's Administrators, that where each of two partners upon a settlement assumed one-half of a partnership debt, each releasing the other to that extent, one of the partners who executed a note for his half was, upon a plea of usury, properly allowed a credit for one-half the usury which had been paid by the firm prior to the settlement; that where a note had been renewed from time to time, interest being paid in advance each time, in paying the claim of usury it was error to deduct from the principal the amounts paid as interest as of the dates they were paid, and then calculate interest upon the balance, and that as the receiving of legal interest in advance is not usurious, the payments, to the extent of the legal rate, should have been treated as interest paid in advance, and the excess of the legal rate credited upon the principal.

Conversion—Jurisdiction—Evidence.

In the case of Putnam vs. The State, just decided by the Supreme Court of the United States, it appeared that Putnam, who was indicted for the conversion of bonds and money, executed certain checks in Boston, the bank of which he was president being located in New Hampshire, and the question arose whether the transaction was committed partly in Massachusetts and partly in New Hampshire, so as to justify the prosecution in the latter state. Incidentally holding that the president had no authority to draw the checks involved, the court held that the transaction did take place partly in both states, and the New Hampshire court, therefore, had jurisdiction. Upon this point the court affirmed the decision of the court below, but reversed the decision upon another ground, viz., that the court erred in permitting a witness to refresh his memory by reference to certain memoranda. The doctrine of refreshing the memory from written documents, the court stated, was confined to the use for that purpose of documents contemporaneous in their preparation with the events recorded, decisions holding that the witness may otherwise in refreshing his memory violate the elemental rules of evidence.

Contract—Railroad Extension—Deed.

The Kentucky Court of Appeals held, in the recent case of Northup et al. vs. Mollett, that the appellee having executed to appellants a bond agreeing to convey to them one-half the minerals upon and under a certain tract of land in consideration of the extension of a certain railroad, and the road having been extended as agreed and appellee having executed a deed in compliance with his bond, the fact that the extension of the road was made under a charter other than that under which the original road was built afforded no ground for canceling the deed; that, besides, appellee having executed the deed after the extension was made, could not complain that the road was built under the charter of another company; that even if it were true that the public was not getting the same train service on the extension of the road that they were getting on the original road when the bond was executed, that fact afforded no ground for canceling the deed, as there was no provision in the bond or deed stipulating what kind of train service there should be on the extension, and that appellee, by executing the deed with knowledge of the fact that the trains were not running regularly on the road, must be regarded as waiving the objection.

BUSINESS NOTES.

Wheat Prices in France.

The *American Agriculturist* says: "A history of agricultural prices for six centuries has just been completed in France! Wheat started in at 25c. a bushel, advanced to 60c. in 1375, then dropped to 27c. in 1500, advancing to $1.36 a hundred years later, hung around a dollar until 1725 to 1850, when it averaged 75c., but then advanced to a dollar at the opening of this century, reaching nearly $2 in 1867, averaging $1.07 in 1885, and going up to $1.40 as the French average for 1891. Since then prices have declined.

Looking for Trade in Venezuela.

A Panama dispatch, April 24, says that the *Star and Herald* says: "Venezuelan papers report the visit to Caracas of the representatives of several English and North American mercantile houses, who have extended their journeys to Valencia, Puerto Cabello and Maracaibo, it is said, with very favorable results. The trade of Maracaibo is almost entirely in the hands of the Germans, and at Ciudad, Bolivar, though French residents predominate, the principal trade is carried on by Germans and North Americans. The English are nowhere at present as competitors. Almost the entire wholesale trade of the country appears to be gradually settling at Caracas since the opening of the various railways leading to the capital. The French consul calls attention to the fact that French commerce is gradually being ousted from Venezuela."

The Population of Chicago.

The Chicago *Inter-Ocean* says: "The present population of Chicago is probably nearer 1,800,000 than 1,700,000. There is no other way so reliable for estimating population as to take the registered vote as a basis of calculation. It is a safer basis than the vote itself. Now it is considered by experts that there are four and a half people, old and young, of both sexes, to every head of a family, and five and a half to every registered voter. The registered vote in Chicago in the spring of 1894 was 285,933. Multiply that by five and a half and the result would be 1,572,632. The school census of that year gave 1,567,757. Thus the actual varied from the estimate only 4,876. Now take the registered vote of the spring of 1896, which was 322,689, and multiply the same by five and a half, and we have an estimated present population of 1,774,790. Deduct from this the variation between the estimate and the actual population of 1894 and the result is 1,769,763, or, in round numbers, 1,770,000."

The April Fire Loss.

The *Journal of Commerce* says: "The fire loss of the United States and Canada during the month of April, as compiled from our daily files, amounts to $12,010,600, or about $1,000,000 more than the total for the month in 1895. The following comparative table exhibits the losses for the first four months of 1894, 1895 and 1896:

	1894.	1895.	1896.
January	$10,568,400	$11,895,600	$11,040,000
February	11,297,600	12,360,200	9,730,100
March	9,147,100	14,239,300	14,839,600
April	11,540,000	11,018,150	12,010,600
Totals	$42,553,100	$49,513,250	$47,620,300

During the month just closed there were 172 fires of a greater destructiveness than $10,000. * * * The most important fires during April were these:

Brunswick, Ga., dock property and warehouses	$450,000
Fairbury, Ill., various	250,000
New York city, dry goods commission house	440,000
Philadelphia, Pa., railroad depot and other	350,000
Cripple Creek, Col., various	800,000
Paris, Tex., various	250,000
Cripple Creek, Col., various	2,000,000

* * * Had it not been for the two conflagrations at Cripple Creek, Col., the record for the month just closed would have been remarkably light."

British and Germans in South America.

The London *Times'* special correspondent in Venezuela writes: "In Venezuela, as in all other South American republics, German goods are in many cases ousting those of English manufacture. Two principal reasons are everywhere given. The first is that British manufacturers will not pay sufficient attention to the requirements of the South American markets; cheap goods are an absolute necessity and find a far more ready sale than those of better quality. German manufacturers inquire what is wanted and what price the article can be sold for; they then make their goods in accordance with the conditions specified. British manufacturers, on the other hand, continue in a routine groove, and appear to think that they know what people require better than the purchasers themselves. This conservative obstinacy, if persevered in, can only result disastrously and end by driving British trade from South American markets. Another reason for the greater expansion of German trade as compared to British is the better means employed to push it. The German commercial travelers sent abroad have in nearly all cases some knowledge of foreign languages; they speak them, though badly as a rule, sufficiently well to make themselves understood, and carry on their business wherever they may be. Quite the reverse is generally found with representatives of British manufacturers, although lately I have noticed a tendency toward remedying this evil. The South American markets are large consumers of European manufactured goods of all kinds, and will well repay careful study by business men; but in order that British trade may make progress, earnest attention must be paid to the points I have called attention to."

New York's Electrical Exposition.

The National Electrical Exposition was formally opened at New York city, May 4, in the Grand Central Palace. There were delegates from over 10,000 electric light plants in the United States. Governor Morton was present. The introductory speech was made by C. H. Wilderming, president of the National Electric Light Association. Mayor Wurster, of Brooklyn, was chairman of the meeting. Ex-Senator Commodore Perry Vedder made an address on the "Electric Era." Governor Morton was introduced and received with enthusiasm. He pressed the key "which was to cause artillery salutes simultaneously at San Francisco, New Orleans, St. Paul, and Augusta, Me." A few minutes later messages were received from San Francisco, New Orleans, St. Paul, and Augusta, Me., "stating that the cannons had been fired." An interesting feature was the demonstration of the power generated by the Niagara Falls. The current turned a model of the power plant in the building, and, "by putting a receiver to the ear, the visitors were able to distinctly hear the roar of the great cataract 462 miles away."

"An Ungrateful Child."

A London trade paper says: "What has happened to our friends in Canada? They have all along protested their great anxiety to be more closely allied to the mother country in business dealings, and yet they are giving an increasingly large share of their orders for iron and steel to the United States. This has culminated in the importation from the United States in 1895 of more than twice the value of dutiable iron and steel exports that were received from the mother country. The import figures show, indeed, that Canada is buying more goods from the United States than she buys from Britain. In 1875, to go back twenty years, Canada's gross purchases for home consumption from Britain amounted to $68,500,000; from the United States it was $48,000,000. The protective tariff was established in 1879, and it was thought by its framers that it would favor the British rather than the American exporter, although the duties levied on British goods were and are precisely the same as those imposed on American. In reality, imports from the United States have grown since then, while imports from Britain have diminished. In 1894-95 they were $55,000,000 and $31,000,000 respectively."

A Satisfactory Copper Year.

The *Westminster Gazette* (London) says: "As was anticipated from the recent dividend announcement of the Rio Tinto Copper Company, the report is of a very satisfactory character. Several incidents have contributed to the bringing about of the favorable result shown. For one thing, the earnings were assisted by the better price obtainable for copper, the average quotation per ton for G.M.B.'s during 1895 having been £42 16s. 6d., as compared with £40 7s. 3d. in 1894. Another factor has been the conversion of the 5 per cent. bonds into the new 4 per cent. issue. This operation, effected by Messrs. N. M. Rothschild & Sons in July last, has resulted in a net saving of £64,000. In future years the saving will be £74,000, or equal to more than 2¼ per cent. on the share capital. A feature in the accounts is the formation of a reserve fund, which now stands at £100,000, while £25,000 has been added to the general depreciation account, and the overburden account has been reduced by £10,000. The net profit for the year was £534,067, after providing for interest and expenses. The accounts show the unusually large cash balance of £422,575. The manager estimates that while 23,000,000 of tons of ore have already been extracted since 1873, the quantity now opened up is not less than 135,000,000, or, say, seventy years' supply. The copper produced, including pyrites shipped, amounted to 32,985 tons, while the sales were 31,295 tons. The reserve heaps, it is stated, now contain 106,164 tons of fine metal, standing at a cost of £4 7s. 6d. on the company's books, or 13s. 6d. less than last year."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

Relatively unfavorable features of the general business situation this week include unseasonably cool weather, which at some centers has checked trade; continued surplus stocks of cottons, which depress prices; dullness and idle machinery in the woolen goods industry; a falling off in demand for lumber at St. Louis and Minneapolis, and continued dullness in iron and steel, where, although mills and furnaces are fairly active, there is a continued absence of new orders. Chicago jobbers report the week's business in light seasonable fabrics as only fairly satisfactory, transactions in clothing smaller than in the like period a year ago, and the leather market weaker, owing to lack of demand, but light hardware relatively more active.

The favorable side of the picture includes a marked increase in the total volume of bank clearings, a longer list of staples for which quotations have advanced, almost uniform and unexpectedly improved prospects for cereal and cotton crops, and a reflection of the more confident feeling as to the autumn's business in an improved demand throughout the territory supplied by St. Louis, Kansas City, Omaha, St. Paul, Minneapolis, Milwaukee, Duluth and Sioux Falls. The least favorable crop report is from Oklahoma, where wheat is in need of rain, and from Washington, where, as per Seattle advices, wheat has been hurt by too much wet weather. In Texas further improvement in the cotton crop outlook has stimulated jobbers to send out travelers to anticipate demand, and the region of which Chattanooga is the commercial center is enjoying the results of an extension of the truck-gardening industry. Savannah's rosin and turpentine receipts and shipments are quite active. The outlook for wheat in eastern Oregon is bright, and the like is true of Kansas, Nebraska and Iowa.

More important staples for which prices are higher are cotton, print cloths, Indian corn, oats, lard and coffee, while quotations for pork, coal and lumber remain practically unchanged. A sale of wool is reported at Boston at "lowest price on record," from which it may be inferred bottom has been reached. Wheat flour, wheat, sugar, petroleum, Bessemer pig and foundry irons have likewise been shaded in price.

Revival of demand for lumber from China, South America and South Africa is showing itself up and down the Pacific coast, San Francisco feeling the demand this week. The arrival of the first cargo of tea of the season is awaited at Tacoma, where the cotton and flour are ready to supply a return cargo.

The dullness of the New York stock market has culminated in renewed bearishness and liquidation on the resumption of gold exports, the failure of public or foreign interest to develop, and the fear that sound money principles will not be emphatically declared in the national political platforms. The declines have extended throughout the active stock list, both railroad and industrial. There was considerable bear selling, and covering operations tend to create a recovery. Foreign exchange is dull and firm around 4.88¾ for demand sterling. The only supply of bills comes from gold shipments, which amount this week to $5,150,000. These transactions are rendered possible at the present level of exchange by higher rates for money in Germany, whither the gold is going.

The evident, though gradual, increase in the volume of business during the past two or three weeks shows itself in an enlarged volume of bank clearings. The aggregate for the week is $1,135,000,000, or 15 per cent. more than last week, but only seven-tenths of 1 per cent. larger than in the first week of May, 1895, although 25 per cent larger than in the corresponding week of 1894. As compared with the like period in 1893, the week's total clearings show a decrease of 17 per cent., and as contrasted with 1892 a decrease of 7.8 per cent,

Stocks of wheat and flour afloat for and in Europe May 1 were equivalent to 47,774,000 bushels, the smallest total so held and in transit on a like date for eight years, 23,664,000 bushels less than one year ago. The world's available wheat stocks May 1—131,316,000 bushels—were almost as small as on July 1, 1895, and much smaller than on July 1, 1894 or 1893. The present prospect is for a smaller quantity of available wheat to be carried over on July 1 next than for years.

Exports of wheat (wheat flour included as wheat) from both coasts of the United States this week amount to 1,882,000 bushels, compared with 1,260,000 bushels last week, 2,805,000 bushels in the first week of May, 1895, 2,815,000 bushels in the corresponding week of 1894, and 2,712,000 bushels in the like week of 1893.

There are 267 business failures reported throughout the United States this week, as compared with 254 last week, 224 in the week one year ago, 198 in the first week of May, 1894, and as compared with 219 in the corresponding week of 1893.

The results of the preliminary investigation by BRADSTREET'S of the annual consumption of wheat per capita in the United States and Canada are given at length in to-day's issue. The degree of coöperation extended by thousands of householders and others who were asked for information is gratifying. While the test is not a demonstration, the amount of corroborative detail from individuals, families, public and semi-public institutions, and the coincidences shown in returns from communities and families where like conditions exist, render the results of exceptional interest, and, it is believed, of value. The somewhat surprising result is reached that the annual average consumption of wheat per capita in the United States is about 5 38 bushels per capita, as opposed to the heretofore accepted rate, 4.66 bushels.

General trade is more active in the Province of Quebec, as reported by Montreal jobbers and by those at Quebec city. There is a fair movement in dry goods and hardware at Toronto, but prices are unchanged and collections slow. At Nova Scotia the volume of business is small, and there is no improvement in the demand for fish. Exports of lumber from New Brunswick to the United States are heavier than last year. The Newfoundland seal fishery turns out better than expected, and the higher price of codfish and better prospects of the lobster fishery are additionally encouragfng as to the business situation in that colony. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $20,849,000 this week, reviving evidently with the opening of navigation and the demand for staple goods throughout the Dominion. The increase as compared with last week is about 25 per cent., but there is a slight falling off compared with the week one year ago, while compared with the week two years ago a moderate increase is indicated. There are 38 business failures reported from the Dominion of Canada this week, against 26 last week, 27 in the week one year ago, and 30 two years ago.

FINANCIAL.

The Money Market.

There has been no specially noteworthy incident in the New York loan market this week. The current gold shipments and consequent reduction of the Treasury specie reserve to about $121,500,000 has been without apparent influence, as also has been the payment of some $3,000,000 into the Treasury by the special depositories for a portion of the bond issue proceeds. The latter payment was mainly in the form of legal tenders. Money has continued to come in from the country, and to this fact must be ascribed the comparative insensibility of the loan market. The demand for commercial paper is increasing, and the supply of choice names is small. Best names and doubles are readily taken at 4½ @5 per cent. Time money is in light demand and more than ample supply at 3@3½ per cent, for short and 3½ @4 per cent. for long dates. Call loans have been quoted on the Stock Exchange at 1½ @4 per cent., the bulk of the week's business being done at 2½ per cent.

The New York Banks.

Neither the gold shipments of last week nor the bond funds covered into the Treasury by the special depository banks appear in last week's bank statement. The feature of the averages is the large increase of $4,188,500 in cash holdings, due to the return of money from the interior. Loans increased $3,380,800 and deposits $7,691,600, while the effect of the other changes was to increase the surplus reserve $2,265,600. The figures of the statement compare as follows with those of the preceding week:

	Apr. 25, '96.	May 2, '96.	Changes.	
Loans	$467,282,700	$470,663,500	Inc.	$3,380,800
Specie	59,002,600	59,324,000	Inc.	321,400
Legal tenders	83,504,200	87,371,300	Inc.	3,867,100
Deposits	487,312,500	495,004,100	Inc.	7,691,600
Circulation	14,317,400	14,370,700	Inc.	53,300
Total reserve	142,506,800	146,695,300	Inc.	4,188,500
Reserve required	121,828,125	123,751,025	Inc.	1,922,900
Surplus reserve	20,678,675	22,944,275	Inc.	2,265,600

At the corresponding period last year the surplus reserve was $27,233 575, against $82,808,150 in 1894.

The Boston Banks.

	May 2, '96.	Apr. 25, '96.	Changes.	
Loans	$159,114,000	$158,489,000	Inc.	$625,000
Circulation	9,838,000	9,833,000	Inc.	5,000
Deposits	100,871,000	99,969,000	Inc.	902,000
Due from reserve agts	20,016,000	20,060,000	Dec.	44,000

Foreign Exchange.

The exchange market is again in the midst of a gold-shipping movement which seems likely to attain considerable proportions. The withdrawals this week have amounted to $5,150,000, all of which goes to the continent, and seems to be shipped as the result of special transactions which, rumor has it, are connected with the operations of the Russian Treasury. As it was understood some time ago that the scheme of readjusting the currency of that country had been temporarily abandoned, the matter is not fully explained. The payments of part of the Chinese war indemnity now in progress at London and Berlin may offer a solution. On

the whole, the exchange market has been very dull, the restricted inquiry resulting at times in positive stagnation. The supply of bills, apart from the offerings of gold shippers, was, however, very small, though there were reports that some amounts of security bills had found their way on the market. The recent offerings of loan bills have practically disappeared. The pressure of gold bills, however, made amends for this, and posted rates for demand sterling were reduced on Wednesday from 4.90 to 4.89½. Actual business in sight sterling was at or near 4.88¾ all week, the quotation touching 4.88½ on Tuesday. The gold shipments consisted of $2,150,000 on Tuesday, $1,500,000 on Thursday, and $1,500,000 engaged for shipment to-day. Foreign bankers are of the opinion that unless something occurs to seriously weaken exchange further shipments are probable next week. Among the incidents of the week was the announcement by the Atlantic steamship lines of a small advance on the freight charge on gold, amounting to about $150 on the $1,000,000.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

May 2.	*May* 4.	*May* 5.	*May* 6.	*May* 7.	*May* 8.
4.88½ @ 4.90	4.88½ @ 4.90	4.88½ @ 4.90	4.88½ @ 4.89½	4.88½ @ 4.89½	4.88½ @ 4.89½

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.88¾ @ 4.88⅞	4.88⅝ @ 4.88¾	4.88½ @ 4.88¾	4.88¾ @ 4.88¾	4.88¾ @ 4.88¾	4.88¾ @ 4.89

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87¾ @ 4.88	4.87¾ @ 4.87¾	4.87½ @ 4.87¾	4.87½ @ 4.87¾	4.87½ @ 4.87¾	4.87¾ @ 4.88

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¾ @4.89; commercial bills, 4.89@4.89¼; francs, 5.14⅜ @ 5.16½; reichsmarks, 95¾ @95 5/16.

The Bank of England discount rate is unchanged at 2 per cent. The bank this week lost £498,000 in specie. Its proportion of reserve to liability is 59 per cent., against 59 69 per cent. last week. In the London open market discount is ⅞ per cent. and call money ½ @¾ per cent. Both the London and German money markets are affected by the payment of an installment of £8,500,000 of the Chinese war indemnity, half of which will be placed to the credit of Japan in the Imperial Bank of Germany and the balance in the Bank of England. Perhaps this transaction would account in a measure for the gold exports here, as it certainly does for the higher rates for money in the German markets.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending May 1, 1896:

	1896.	1895.
Dry goods	$1,228,164	$2,224,186
General merchandise	7,042,590	6,988,065
Totals for the week	$8,270,754	$9,212,251
Previously reported	169,918,316	175,115,040
Since January 1	$178,189,070	$184,327,291

The exports (exclusive of specie) from New York to foreign ports for the week ending May 5 were $739,892 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$7,045,439	$7,328,506
Previously reported	128,648,569	118,128,169
Since January 1	$135,694,008	$125,456,675

Silver.

The silver market is featureless. The London quotations for bars have declined slightly, to 31d. per ounce, and New York has followed suit with a drop to 68c. Recent mail advices attribute the movement of silver to the operations of the Indian Treasury.

THE STOCK MARKETS.

The New York Stock Market.

Dullness in the early portion of the week was succeeded later on by speculative weakness, with some liquidation and renewed bearish pressure. The stock market may be said to have been ripe for a moderate reaction, as the recent improvement had been mainly founded upon the belief that the adjournment of Congress was near, that the foreign markets were ready to join in a bull movement in American stocks, and that emphatic declarations in favor of sound money on the part of the political parties would inspire general confidence. These presumptions were, indeed, the basis both for the recent professional buying of stocks and the steadiness of holders, in the face of dullness and public apathy. Waiting and uncertainty are proverbially likely to culminate in more or less liquidation, and in the present instance the tendency has been increased by the fact that, owing to delay on the part of the Senate, an adjournment of Congress is not probable till next month, while not only is London decidedly indisposed to interest itself in the American market, but foreign exchange is in a position which facilitates the export of gold to the continent, about $5,000,000 having been shipped this week. More or less capital has also been made of the uncertainty about the attitude of the coming St. Louis convention on silver and the currency question, and the United States Senate has contributed its quota toward unsettling the market by the passage of a resolution for an investigation of the recent sales of bonds by the Treasury. The street, in short, is impressed with a belief that the political outlook is not altogether favorable to the embodiment of sound money views in the platforms of one or the other of the great political parties. As pointed out elsewhere in this issue, some of the leading bears are of the opinion that the market presents little or nothing favorable to the short side of the account, and that, on the contrary, the prospect favors increasing strength in prices and a widening speculation. Such interests seem, however, to have revised their opinions, and in the declines during the latter portion of the week the leaders of the bear party were more or less active, and were followed by the bulk of the traders. The bullish feelings which for a fortnight past have animated the latter element in the speculative world was, indeed, already weakened by the complete absence of commission orders or outside buying, and by the gold shipments and the continued indifference of Europe to the situation here. London, while a moderate seller on the declines, has not been a factor of importance, though the growth of favorable sentiment in regard to American securities there has been checked by the renewal of bearish tendencies on the part of Wall street itself. On Friday afternoon, however, the market tended to recover on buying by the shorts against their contracts put out during the two preceding days.

The market has not been at all suggestive of important changes. There is, indeed, little to say about the general railroad share list other than that prices sold off under the combined liquidation and bearish pressure already referred to. St. Paul fell from 79⅛ to 76⅞, Burlington from 81 to 78⅞, and Rock Island from 72⅛ to 69⅝. Missouri Pacific was particularly weak and was the object of aggressive bear selling in which it fell from 28⅜ to 25⅛. There was also considerable selling of Atchison securities, attributed to foreign interests, the adjustment 4s of the company being particularly weak. Crop reports were irregular in their tenor, though the general impression of the "street" continues to be favorable.

In the industrial list Sugar was the feature, declining from 125⅛ to 121¾. The manipulators apparently relaxed their efforts in the face of the general decline, and there was no further reference to the presumptive extra dividend. The weaker tone of the sugar market was also effective in this connection. Tobacco stock was also lower on the indictment of the company's officials at the instance of a rival manufacturing concern, and United States Rubber fell on talk of an opposition to the manufacturing combination.

Boston Stock Market.

The market has shown more activity, considerable excitement being worked up in Bay State Gas, which closed 4 points higher. Atchison has ruled quiet and closed ⅞ lower, with Chicago, Burlington & Quincy only 1¾ lower at the close. New York, New Haven & Hartford Railroad advanced 3 points, with West End Railroad ½ higher. Boston & Montana Copper shows 2½ points advance, while Sugar has held up well in price, but closes lower. United States Leather yet very quiet, but preferred advanced 1 point.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending—

General Mention.

The reorganization managers of the Philadelphio & Reading Railroad Company announce that the decree of foreclosure sale having been entered, all holders of general mortgage bonds, first, second and third preferred income bonds, deferred income bonds and stock of the company, who have not already deposited their securities under the reorganization plan, must do so up to May 21, after which date the following penalties will be exacted: $20 on each bond of the three grades of preference income bonds, $1 per share of stock, and 50c. on each deferred income bond. The first installment, being one-quarter of the entire assessment on the income bonds and stock, must be paid at the time of deposit, with interest at 6 per cent. from January 10, 1896.

The holders of reorganization certificates or receipts for preferred and common stock of the Northern Pacific Railroad Company, deposited under the plan and agreement of March 16, are notified that an installment of $3 per share in respect of preferred stock, and $5 per share in respect of common stock, is called and payable at the office of J. P. Morgan & Co., New York, Drexel & Co., Philadelphia, or Deutsche Bank, Berlin, on or before May 26 next. Reorganization certificates or receipts must be presented so that such payment may be indorsed thereon.

Messrs. J. P. Morgan & Co. announce that they have acquired another of the Northern Pacific branch lines, viz., Northern Pacific & Manitoba Terminal Railway Company, on the basis of 50 per cent. in new Northern Pacific 3s, and 50 per cent. in new Northern Pacific preferred stock.

* Pittsburgh. † Nominal.

TRADE FEATURES.

DEMAND RELATIVELY MOST ACTIVE AT THE NORTHWEST.

GENERAL TRADE MODERATELY IMPROVED.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, *May* 8.—General conditions continue to result in quiet in all merchandise departments. Buyers in nearly all lines are doing little, and values for most kinds of merchandise favor buyers. Money market is easier under a moderate demand for accommodations, call loans being made on choice security at 3 per cent., while time loans on choice collateral, four and six months, are quoted as low as 4 per cent., with mill paper at 4@5c. as to names. The boot and shoe business is fairly steady, the low prices made having a tendency to give confidence to buyers, and the latter are placing orders readily where they need supplies. Leather is dull, but the tone is firmer on the part of holders, who are asking an advance in many instances. Hides are dull, but the situation west is firm. Iron and steel are moving quietly, but the pools hold prices steady. Lumber is quiet but steady. Coal is steady, and recent buying to stock up has increased.

Providence, *May* 8.—In woolen manufacturing there is no improvement. Manufacturers are still making heavy-weight goods and will not change until midsummer. The mills are running but a portion of their capacity. A strike is in progress among the journeymen tailors of Providence, headed by the Tailors' Union. Printers of cotton goods continue to find trade quiet.

Philadelphia, *May* 8.—There is no improvement in dry goods; a number of mills are on one-half time, and wage-earners necessarily restrict expenses. This is felt, to a degree, by smaller retailers, hence there is a curtailment of orders to jobbers. Petroleum firmer, under the most liberal offerings. Leather continues inactive, and the demand for boots and shoes light. There is a slight improvement in the sale of paints and glass. Lumber in more active demand.

Pittsburgh, *May* 8.—There has been no marked change since last week. A steady demand continues for all staples, and prices generally are well maintained. Money is somewhat easier. Country collections are fair. Contrary to expectations, the iron market has been dull, and very few sales are reported. A slight decline in the price of Bessemer iron is noted, but aside from this prices remain unchanged and firm.

Baltimore, *May* 8.—There is no new feature in trade circles. Orders, as a rule, have been small, and are still confined to the "filling-in" variety. Collections are seasonable.

West and Northwest.

Cleveland, *May* 8.—Trade conditions are without noteworthy change from those ruling throughout April.

Cincinnati, *May* 8.—Business is quiet; collections slow.

Detroit, *May* 8.—The general trade situation here is featureless. In most lines business is fair for the season. Collections show very little improvement, being still slow.

Chicago, *May* 8.—There has been a good business with the dry goods houses in light summer fabrics and upholstery, but orders are mostly to replenish stocks. Clothing is slower than last year, the exception being the enlarged sales of bicycle clothing, which is cheap, and is cutting into the sales of regular goods. There is only a limited demand for shoes. Tanners report less inquiry for leather, and say the manufacturers have supplied their wants for the present. There is a good speculative inquiry for steel, but no large sales have been closed. Bar iron and light hardware are moving well, especially the latter, and prices are stiffening. Groceries are fairly active. Lumber sells fairly well in cargoes, and the yard trade is picking up. Potatoes are selling the lowest on record, 1c. to 6c. in Wisconsin, and 12c. to 17c. at Chicago; shippers are mostly losing money. Eggs are the lowest on record, 8c. for fresh. Wool receipts, 1,442,980 pounds.

Louisville, *May* 8.—General wholesale trade is quiet. Leaf tobacco receipts are very light; sales chiefly in low grades. Jobbers in whisky report a fair volume of business, but the market is still depressed by reason of the production exceeding the demand. Collections are not seriously complained of.

St. Louis, *May* 8.—There are no new features in general trade. Summer weather is of considerable benefit to retailers, who are ordering in fair amounts, but mainly for immediate use. Jobbers and manufacturers of staples are in better spirits, as crop reports continue favorable, and they anticipate a betterment by fall. Leather is selling in fair quantities, but values are complained of. Hides are dull, with light stocks, and the market is a waiting one. Pig iron is ordered in only small lots, as far as new business is concerned, prices being easier. Structural material shows continued improvement, especially for local buildings and general railroad purposes. The wool market is steady, with ready sales of new clip. The lumber business in general is unsatisfactory, both receipts and shipments being much less than in the same period of last year. Collections are a trifle better, but still unsatisfactory.

Kansas City, *May* 8.—Jobbing trade in all lines

is quite satisfactory, with fair collections. Kansas wheat crop is very promising for an immense yield. Oklahoma is badly in need of rain. Without rain, in a few days wheat crop will suffer. Live stock receipts are liberal, with low values.

Milwaukee, May 8.—The volume of business has been quite fair, and continues to increase by degrees as the season advances. Collections are somewhat improved.

St. Paul, May 8.—Spring trade, which has apparently only been waiting for settled weather, has been good with retailers during the past week, and has had a stimulating effect on business among jobbers who report sales larger than last week, and collections fairly good.

Minneapolis, May 8.—Business is very fair for the season, the warm weather giving trade some impetus. Lumber is quiet.

Omaha, May 8.—The prospects for a bountiful crop have improved. Orders for goods are small and collections are fair.

Sioux Falls, May 8.—Travelers report a good trade, with small orders for sorting up stocks. Retail trade is fair. Collections very fair.

Southern Cities.

Charleston, May 8.—Business in all lines is quiet. Collections are very slow.

Savannah, May 8.—Trade for the week is good. Collections are fair. There is an increase in receipts and shipments of both rosin and turpentine, with good demand.

Atlanta, May 8.—Trade remains in about the same condition as last week. Collections seem to be satisfactory.

Augusta, May 8.—Business in general lines is about the same as last week, with a little improvement in groceries. Collections are not satisfactory.

Jacksonville, May 8.—There is no change in trade, except improved collections.

Birmingham, May 8.—Trade is dull, as expected, for the season. Calculations for the fall are favorable.

Chattanooga, May 8.—Collections are reasonably good; trade about the same. Truck gardening in this section has been considerably increased during recent seasons, and is now bringing in considerable money.

Memphis, May 8.—General trade shows no change. Collections are fair.

Nashville, May 8.—The weekly output of goods is up to the average for the season, though it is almost too early for other than quiet trade. The volume of wholesale business done since January exceeds that at the same period last year, although profits are lighter. Retail business is not so active as last week, although it is not dragging.

New Orleans, May 8.—The weather is favorable for crops, and conditions reported good. General trade is not brisk, and the volume is under expectations. Stocks of cotton show a steady reduction. Rice is dull. Holders of sugar firmer; offerings light. Movements in local securities light.

Galveston, May 8.—Trade is dull in all lines, but jobbers are starting out travelers with fall goods, and anticipate a good business on the excellent crop outlook.

Pacific Coast.

San Francisco, May 8.—Business is quiet in wholesale lines; retail steady. Freights firm; produce market more active. Ship loaded May 8 with lumber for South America. Orders for lumber from China and South Africa are increasing. Weather conditions are favorable for wheat crop. Collections are slow.

Portland, May 8.—There are good prospects for a large wheat crop in eastern Oregon. The wool industry in that locality is very quiet on account of the indisposition of farmers to shear during the continued cold weather. Both retail and wholesale trade is quiet, while collections are only fair.

Tacoma, May 8.—General trade is quiet. China steamer with the first tea cargo of the season is due this week; return cargo of cotton and flour awaiting. Last wheat cargo of the season is now loading.

Seattle, May 8.—General trade continues better. Wet weather has been bad for grain and crops.

Canada.

Toronto, May 8.—General trade is without special feature. There is a fair movement in dry goods and hardware, with prices unchanged. Collections are slow. Wheat is lower at 75c. at Ontario points.

Montreal, May 8.—The trade situation shows but little change. However, it is more active with more encouraging prospects. Quebec City reports a decided improvement both in the movement of goods and in collections.

Halifax, May 8.—The volume of business done during the week has not been large. Wholesale dealers report a fairly good country trade, principally in sorting-up orders. There is no improvement in the fish business. The sugar and provision markets are quiet, with prices unchanged. Reports from various sections of New Brunswick show considerable activity in the movement of lumber, and shipments to the United States are in excess of last year. The result of the Newfoundland seal fishery has turned out somewhat better than was at first anticipated. There has been an advance in the price of codfish, and the prospects of the lobster fishery are encouraging, as the season promises to be an abundant one.

WEEKLY EXPORTS OF WHEAT, CORN AND FLOUR TO EUROPE.

Dry Goods.

The weather has been cold since the first of the week, and this has been unfavorable to the retail movement. With jobbers and agents general business is slow. Raw cotton has hardened, and 1/16c. advance on print cloths is asked in Fall River, but the general position of the market for cotton goods is bad. The surplus goods made up is excessive, and tends to depress values and prevent improvement. Printed fabrics are dull outside of some season's favorites, which yet go well. Ginghams continue dull. Dress woolens are quiet, with the mills fairly employed on orders. The jobbing call is slow. Flannels are dull and the outlook unsatisfactory. The market for men's-wear woolens continues dull, with much machinery idle, and the outlook unfavorable for any immediate improvement.

Wool.

Trade continues dull, with prices weak and in buyers' favor. Larger manufacturers are well supplied with wool, and to tempt them to buy ahead very low bids have to be accepted. One large manufacturer is reported to have picked up a line of quarter-blood unwashed wool at 14½c., there being about 400,000 pounds in the purchase. The wools were bought in Boston and other leading eastern markets. This price is the lowest ever known for this grade of wool. Other fleeces are dull, and, in the absence of business, quotations are nominal. Territory wools are in slow demand, and to sell any line low prices have to be accepted. Australian wools are dull, but the market holds steady, in sympathy with the high values abroad. Latest reports from London auction sales note an easier tone there, but prices are about the same. Carpet wools are dull but steady.

ADDITIONAL ERIE TRAFFIC.

The *Commercial Bulletin* says: "Some important changes regarding the proposed handling of California fruit in this market during the coming season have followed the conference of the large receivers, held a week or so ago. At the close of that conference the intention was to convert the old Erie building, on West street, running from Reade to Duane streets, into a California salesroom, this building being about midway between the fruit termini of the Erie and West Shore railroads, which roads, it was understood, were to bring the fruit forward east of Chicago.

"Since the conference, however, there has been a complete change in the plans, and the changes have been indorsed by all receivers. Arrangements have been completed to ship all the fruit over one road—the Erie—and as there is no further need for a salesroom that shall be independent of both railroads, the plan for such a salesroom has been abandoned. Instead, the old auction house on the Erie dock is to be immediately enlarged, and all the California deciduous fruit arriving during the coming season will be transported by the Erie Railroad and sold on the Erie dock. * * *

"There appears to have been considerable rivalry for the business between the West Shore and the Erie railroads, though what form the inducements took is not known. It is argued that they could not have been in the form of cut rates, as such action would be a violation of the Joint Traffic Association agreement.

"The Erie Railroad has agreed to furnish room and facilities for a consolidated auction room at the street end of pier 20, with a seating capacity of not less than 300, this room to be known as the Consolidated Auction Salesroom, and to be subject to such rules as may be agreed to between the California Fruit Growers' and Shippers' Association and the receivers here, the room to be free and open to all buyers, receivers and auctioneers upon absolutely an even footing. The Erie Railroad also agrees, should it become necessary to do so, to have the fruit ready for exhibition early enough to begin the auction sales at 8 o'clock in the morning. Notwithstanding the recent reports of damage by frosts in California, it is expected that the coming season's receipts will be large, as fruits from Washington and Oregon are also to be included among the California receipts."

SHIPMENTS OF SOUTHERN PIG IRON ABROAD.

Mr. James Bowron, treasurer of the Tennessee Coal, Iron & Railroad Company, in a letter to the *Manufacturers' Record* concerning the possibility of exporting pig iron, says:

"There are no large sales of Alabama iron likely to be made in England, for, although we can, at

our lowest record of prices, put iron in certain ports a little below the parity of English quotations, it would manifestly not be a profitable business to attempt to cultivate—it would not pay for the trouble. There is just about room at to-day's prices for Alabama iron to scrape in and make a reasonable profit at such points as Genoa, Barcelona, Hamburg and Bremen, and, perhaps, Havre and Lisbon, and there certainly would be not only a fair but a good return on shipments to such points as Tokio and Melbourne if we had control of the tonnage. It is in this respect that the English system of subsidized mail steamers gives a great advantage to English commerce and industry, as it opens the way for certain shipment at stated schedules and reasonable freights to every important market. There is not quite the same room for export of Alabama iron that there was a year ago, because prices are not quite so low as they were then. It is a question, however, whether a combined effort, if made by several of the southern companies, might not be successful. There is some idle plant in the south which might be put to work cheaply, reducing the fixed charges of those stacks which are running, and if such additional business were put in at cost price, and the iron contributed ratably by a number of companies, there might be a large quantity of it delivered at competitive foreign ports at prices that would undoubtedly go below the ability of our English friends to meet."

Mr. Thomas Seddon, president of the Sloss Iron and Steel Company, of Birmingham, writes the *Manufacturers' Record* as follows:

"There is no significance to be attached to our shipment of pig iron to England. We shipped two small lots of 250 tons each as samples to pig iron brokers, who wanted to have it used over there to see whether anything could be done with our iron abroad, and as under the very depressed times we are now having there is an apparent profit between the Birmingham and the England markets, provided we can secure a vessel going abroad light, and it just so happens that, owing to light shipments of cotton, several vessels wanted stiffening, we were enabled to get an abnormally low rate of freight, which allowed us to make the shipment. Of course, we are willing to have the experiment made to see if anything in the future will develop from it, but I have no hope that any considerable business is possible with the other side."

BRITISH VIEW OF AMERICAN TRADE SITUATION.

The London *Statist* says: "The commercial position in the United States is stated to have somewhat improved. In New York commercial bills are said to be more readily discounted than recently was the case, and trade in the interior, the iron trade particularly, is asserted to be again expanding. These reports must be accepted with caution. Naturally, in the spring a considerable number of new orders for iron are received, as fine weather permits outdoor operations; but this always occurs, and were there no expansion in the demand at the advent of spring the position of trade in the United States would indeed be extremely bad. More disposition to accept commercial bills would mean that the distrust regarding certain houses is diminishing. At the present moment large interests are at work in endeavoring to make the position in the United States appear as favorable as possible. Various syndicates have considerable amounts of reorganization securities to market, and New York is loaded with securities sold by European investors. Moreover, there has recently been a renewal of the gold exports from the United States, which New York is extremely anxious to prevent. If, therefore, European investors can be induced to believe that trade is improving, and to purchase American securities, these purchases might be sufficient to prevent gold exports, at the same time that the various syndicates would be able to market the stocks they are so anxious to dispose of. The more favorable reports regarding trade in the United States, combined with purchases by syndicates and individuals interested in hoisting up prices, have this week brought about some improvement in prices of American railroad securities. The bulk of the purchases has been for interested parties, but there has, nevertheless, been some small amount of buying of bonds for English and continental investors. While these purchases cannot have materially affected the cash balance due by the United States to this country, exchange houses have reduced the rate of exchange, thus hoping to create the idea that the gold exports are averted. While it is possible that prices may further rise to some slight extent in view of the powerful influences at work, we would still caution investors to leave American shares alone. The currency position in the United States is still unsettled, and sooner or later there must inevitably be a renewed decline in prices. The slack season for American exports has now to be faced, at the same time that heavy remittances have to be made here in payment for goods imported and for interest. Hence, gold exports on a large scale may again be witnessed in the near future. If speculative English investors desire to back the view that later on American securities will benefit from dispersal of political and economic clouds, they should limit operations to bonds at low prices—new issues of reconstructed roads, for instance; or if they determine to run the risk of shares, preferentially they should select some at quotations about 20 or under."

GOLD PAST AND PRESENT.

The following is taken from *Chambers' Journal*:

"Just before the Californian discoveries, namely, in 1849, the world's annual output of gold was only about £6,000,000. Then came the American and Australian booms, raising the quantity produced in 1853 to the value of £30,000,000. After 1853 there was a gradual decline to less than £20,000,000 in 1883. This was the lowest period, and then the DeKaap and other discoveries in Africa began to raise the total slowly again. Between 1883 and 1887 the El Callao mine in South America and the Mount Morgan in Australia helped greatly to enlarge the output, and then in 1887 the 'Rand' began to yield of its riches. The following are the estimates of a mining expert of the world's gold production during the five years 1890–94, namely: 1890, £23,700,000; 1891, £26,130,000; 1892, £29,260,000; 1893, £31,110,000; 1894, £36,000,000. In these estimates no distinction seems to have been made between mine valuations and mint valuations, but it will be observed that the estimate for 1894 corresponds with that of the United States mint authorities.

"As to the future of the South African sources of supply, it is estimated by Messrs. Hatch & Chalmers, mining engineers, who have lately published an exhaustive work on the subject, that before the end of the present century the Witwatersrand mines alone will be yielding gold to the value of £20,000,000 annually, that early next century they will turn out £26,000,000 annually, and that the known resources of the district are equal to a total production within the next half century of £700,000,000, of which probably £200,000,000 will be clear profit over the cost of mining."

DRIFT TO THE CITIES.

The Philadelphia *Press* says: "The Massachusetts state census of 1895 gives renewed proof of the steady drift of population toward the cities, especially in the older states. The national census of 1890 emphasized this fact. It showed that of the total population of 62,622,250 in the United States, 18,284,385, or 29.20 per cent., resided in cities with 8,000 or more population. This was an increase of 6.63 per cent. over the number shown to be residing in cities in 1880. There has, in fact, been a steady increase in the per cent. of total population residing in cities shown by every national census with the exception of the census of 1820, when the movement toward cities apparently stood still, although it did not lessen even then to any appreciable degree.

"The increase per cent. of population in cities of over 8,000 inhabitants has, however, been much more rapid in Massachusetts than in the country at large. Some difference was naturally to be expected, but not so much as actually exists. In 1790 there was 3.35 per cent. of the inhabitants of the United States living in cities with 8,000 population or over. This per cent. increased until in 1890 it was 29.20. How rapidly the per cent. has increased in Massachusetts is shown in the following table:

Year.	*Total population.*	*In cities above 8,000.*	*Per ct. in such cities.*
1790	373,787	18,038	4.7
1820	523,287	56,029	10.7
1840	737,700	199,694	27.0
1850	994,514	357,218	35.9
1860	1,231,066	534,805	43.2
1870	1,457,351	779,750	53.5
1880	1,783,085	1,110,623	62.2
1885	1,942,141	1,290,583	66.4
1890	2,239,943	1,564,931	69.8
1895	2,500,183	1,812,367	72.5

"This is a startling revelation. It shows that the per cent. of city residents in Massachusetts is nearly three times as great as it is in the country at large, and that it is rapidly increasing. Between 1880 and 1890 the per cent. of city residents to the total population grew from 22 57 to 29.20, and in Massachusetts it grew from 62.20 to 69.90. According to the state censuses of 1885 and 1895, the per cent. of city population increased from 66.4 in the former year to 72.5 in the latter year. If this increase goes on for twenty years longer, practically all the population of Massachusetts will be living in cities. The per cent. would doubtless have been larger last year than the census showed it to be had not the two previous years been so depressing to manufacturing, the growth of which has been one of the largest factors in attracting people to Massachusetts cities.

"It was believed that the introduction of electricity as a motor for street and suburban railroads would do much to check this drift cityward and help to scatter population. As yet, however, it seems to have done little, if anything, in this way, although the development of the trolley has been nowhere more marked than in Massachusetts during the past ten years. In those ten years the population of the state increased 560,359, and 521,784 of this increase went to the cities and towns with over 8,000 inhabitants, leaving only 38,575 to go to the rural districts. It may be argued, however, that this is too short a time to change the drift of a century, that the smaller places have not yet wakened up to their possibilities, and that the next five years, when cheap fares will prevail, will show a more marked change in this respect. But if electricity has the effect on agricultural operations which is predicted, and demands fewer hands for raising crops, it may counteract in a measure the influence of the trolley in scattering population.

"But whether or not the trolley car is to have any marked influence in increasing the population of rural districts, it is certainly causing a change in city population. A decided drift from the less to the more desirable residential localities is plainly noticeable in large cities now that it is a question of minutes only to reach those localities. To this fact is largely ascribed the great fall in rents in Chicago. The drift is toward the better-built houses and to the districts provided with parks. This drift should in time have an appreciable effect upon the health of cities."

INCREASED SOUTH AMERICAN TRADE.

The Philadelphia *Press* says: "The proposed trip to South America by a party of representative manufacturers, in response to invitations extended by the Argentine, Brazilian and Uruguayan governments, has been taken in charge by the National Association of Manufacturers, and the party is now being made up. President Theodore C. Search, of the National Association, announced yesterday that the preliminary arrangements had been made, the itinerary had been planned, and the date of departure had been set for July 1.

"Speaking of the trip, President Search said: 'I consider this tour as one of the most important steps thus far taken in the efforts to extend our trade in the South American markets. This trip will be an object lesson, strikingly instructive and suggestive. At the very outset the necessity for going to England in order to find a line of steamships running direct to the River Platte will demonstrate the urgent need of better facilities for reaching South America from this country. Then the whole make-up of the party will be such as to insure eminently practical results. Each member of this party will be a leading and representative man in some important branch of industry, and in this manner the investigations by the party will be given the broadest possible scope. Every man will be expected to observe those conditions most directly affecting the branch of business in which he is engaged, and upon the return of the party the observations of its members will be consolidated in a comprehensive report on the South American markets.

"'In order to make this party doubly representative, its members will not only act for the industries in which they are engaged, but they will also be commissioned as delegates from the boards of trade and chambers of commerce of the leading cities. The party is limited to thirty, and the utmost care is being exercised in selecting its members, in order that it shall meet every requirement from a practical business point of view.'"

GERMAN IRON IN FOREIGN MARKETS.

The London *Iron and Coal Trades Review* says: "We make no apology for calling prominent attention once again to the remarkable tables published in the *Bulletin* section of the *Review*, showing the exports of iron and steel from Germany in 1895. The record is in every way remarkable, and it is one of which our German friends have good reason to be proud. By unflagging industry and constant push they have succeeded in introducing and finding ready markets for their iron and steel in practically every corner of the world. There is no market, small or great, in which they have not found a footing, and in many markets they have secured supremacy. The *Review* has, of late, been much occupied with the discussion of how this result has been accomplished. The recent delegation of employers and workmen attempted to show what Germans had done in the way of cheapening the productions of their iron and steel works, and in finding markets for them. The figures now published are of interest and value as further illustrating the progress that has been made in this direction.

"To British manufacturers and economists perhaps the most striking feature of the statistics published in the *Bulletin* will be the success which the German manufacturers have secured in British markets. Their exports do not assume one form only. They include rails, sleepers, wire, merchant iron, tires, axles, wheels, and numerous other products. We have, in short, to reckon with competition in every branch of manufacture, except perhaps pig iron, in which our German friends leave us almost severely alone. And yet they are not satisfied. As we show in another part of this issue, they are disposed to resent the fact that the Belgians have a lower range of railway rates and charges than they have themselves, and each of the chief iron-producing districts in Germany is now making vigorous efforts to secure still further reductions of railway rates, which, if they succeed, will leave them in a still better position to compete with ourselves. We are glad, under these circumstances, that the board of management of the British Iron Trade Association has decided to discuss the whole question of German and Belgian competition at the conference called for May 6. The report of the delegation, which was recently published, throws a good deal of light on the subject, but a good deal still remains to be said."

In the United States about 81 per cent. of the total number of concerns failing had $5,000 or less, and 10 per cent. had from $5,000 to $20,000 capital.

BRADSTREET'S

A JOURNAL OF TRADE, FINANCE AND PUBLIC ECONOMY.

ADVERTISING DEPARTMENT.

BRADSTREET'S is issued every Saturday, and goes to the better class of business and professional men of this country and Europe—including bankers, lawyers, railroad and insurance officials, merchants, manufacturers, and public men.

It has a larger and choicer paid subscription list than any similar periodical in the world.

SUBSCRIPTION, FIVE DOLLARS A YEAR.

ADVERTISING RATES FOR SINGLE INSERTIONS

DISPLAYED.....25 cents a line, agate measure.

DIVIDENDS.

THE AMERICAN COTTON OIL COMPANY.

PREFERRED STOCK DIVIDEND NO. 9.

46 CEDAR STREET, New York City,
May 5, 1896.

The regular Semi-annual DIVIDEND of three (3) per centum upon the outstanding Preferred Capital Stock of The American Cotton Oil Company has this day been declared, out of the net profits of the Company, payable on the first day of June, 1896, at the office of Messrs. Winslow, Lanier & Company, Bankers, No. 17 Nassau St., New York City, to the holders of record of such Preferred Stock upon the closing of the Preferred Stock Transfer Books. The said books will be closed for the purpose of this dividend on Friday, the 15th day of May, 1896, at 3 o'clock P.M., and will remain closed until Tuesday, the 2nd day of June, 1896, at 10 o'clock A. M.

By order of the Board,

JUSTUS E. RALPH, Secretary.

FINANCIAL.

TO THE HOLDERS OF

Reorganization Certificates or Receipts for Preferred and Common Stock

OF THE

NORTHERN PACIFIC RAILROAD CO.,

Deposited under the Plan and Agreement of March 16, 1896.

NEW YORK, PHILADELPHIA, AND BERLIN,
May 5, 1896.

Pursuant to the provisions of said Plan and Agreement, notice is hereby given that an instalment of

$3.00 per share in respect of Preferred Stock, and
$5.00 per share in respect of Common Stock,

on account of the cash payments specified in the Plan, is hereby called for, and is payable at either of our offices on May 26, 1896, and all holders of such certificates or receipts are notified to make such payment on or before that date. Their reorganization certificates, or receipts, must be presented so that such payment may be endorsed thereon.

J. P. MORGAN & CO.,
23 Wall Street, New York.
DREXEL & CO.,
Fifth and Chestnut Streets,
Philadelphia, Pa.
DEUTSCHE BANK,
Berlin.

NORTHERN PACIFIC REORGANIZATION.

Northern Pacific & Manitoba Railway Company.

Terminal Sinking Fund 5% Gold Bonds.

23 WALL STREET, NEW YORK, May 7, 1896.

A basis of settlement has been arrived at with the holders of over 90 per cent. in amount of the above-described bonds, under which they are to receive in exchange therefor under the Northern Pacific Reorganization Plan and Agreement of March 16, 1896, Certificates entitling them to

50 per cent. of the principal of their bonds in the reorganized Northern Pacific General Lien 3 per cent. bonds, bearing interest from January 1st, 1897.

50 per cent. of the principal of their bonds in the reorganized Northern Pacific Preferred Stock Trust Certificates.

All holders of Northern Pacific and Manitoba Railway Company terminal bonds desiring to avail of the above-described arrangement are notified to deposit same (with all unpaid coupons attached) at either of our offices not later than May 26th. Deposits after that date, if received at all, will be subject to such terms and conditions as we may determine.

J. P. MORGAN & CO.,
23 Wall Street, New York.
DREXEL & CO.,
5th and Chestnut Streets, Philadelphia.
DEUTSCHE BANK,
Berlin.

TO THE HOLDERS OF

PHILADELPHIA AND READING RAILROAD COMPANY'S

General Mortgage Bonds, First, Second, and Third Preference Income Bonds, Deferred Income Bonds, Stock, } and of receipts of Central Trust Company of New York therefor

NEW YORK, PHILADELPHIA, AND LONDON.
May 6th, 1896.

A decree of foreclosure and sale of the property of the Philadelphia and Reading Railroad Company and Philadelphia and Reading Coal and Iron Company having been entered, all holders of securities of the above issues not heretofore deposited under the plan and agreement of reorganization, dated December 14, 1895, are hereby notified that they may still deposit same with us, at either of our offices, as provided in said plan and agreement, up to May 21, 1896.

The first instalment, viz.:

$50.00 per $1,000 bond on First, Second, and Third Preference Income Bonds;
$2.50 per share on Stock;
$10.00 per $1,000 bond on Deferred Income Bonds, being one-quarter of the entire assessment on such Income Bonds and Stock, must be paid at the time of deposit, with interest at 6 per cent. from January 10, 1896. After May 21 a penalty of
$20.00 per $1,000 First, Second, or Third Preference Income Bond;
$1.00 per share of Stock;
50c. per $1,000 Deferred Income Bond,
will be exacted.

J. P. MORGAN & CO.,
23 Wall Street, New York.
DREXEL & CO.,
Fifth and Chestnut Streets, Philadelphia, Pa.
J. S. MORGAN & CO.,
22 Old Broad Street, London.

FINANCIAL.

TO THE HOLDERS OF

St. Louis & San Francisco Railway Company

4% CONSOLIDATED BONDS.

Holders of Bonds should forthwith deposit them at either The Mercantile Trust Company, 120 Broadway, New York City, or at its agency for this purpose, American Loan & Trust Company, 53 State Street, Boston, Mass., under the Plan and Agreement of reorganization, dated April 21st, 1896.

Holders of 4 per cent. Consolidated Bonds paying the assessment of 10 per cent. will receive for each Consolidated Bond of $1,000,

$140 IN FIRST PREFERRED STOCK,
$1,000 IN SECOND PREFERRED STOCK,
$1,800 IN COMMON STOCK,

and will have the right to subscribe to securities as set forth in the plan.

The first instalment of the assessment, 5 per cent., on the Consolidated Bonds, must be paid at the time of deposit; the second instalment, 5 per cent., July 15th, 1896. The right to subscribe to the securities offered for subscription to depositing Bondholders must be availed of at the time of deposit of the Consolidated Bonds.

JUNE 1ST IS THE DATE SET FOR FINAL DEPOSIT UNDER THE PLAN; THEREAFTER BONDS, IF TAKEN AT ALL, WILL ONLY BE RECEIVED UPON TERMS TO BE ANNOUNCED.

FINAL NOTICE.

TO HOLDERS OF

Green Bay, Winona & St. Paul RAILROAD COMPANY'S

Income Bonds,
Preferred and
Common Stock.

Notice is hereby given that the sale of the railroad property will take place on May 12th, 1896, and that none of the aforementioned securities will be received on deposit under the plan of reorganization after the eleventh day of May, 1896, up to which date they will be received upon payment of the assessment fixed by said plan, and a penalty of ¼ of 1 per cent.

Dated NEW YORK, April 30, 1896.

JOHN I. WATERBURY, Chairman,
MAYER LEHMAN,
E. S. HOOLEY,
} Committee.

LEOPOLD WALLACH, of Counsel.
HENRY ZUCKERMAN, Secretary.

BALTIMORE & OHIO RAILROAD CO.

5% Bonds of 1925.

(LOAN OF 1885.)

In consequence of the appointment of Receivers of the Baltimore and Ohio Railroad Company, and with a view to the protection of the interests of the holders of the above mentioned Bonds, we invite holders of such Bonds to deposit the same, with all Coupons attached, at our office, on or before June 1, 1896, subject to an agreement dated April 10, 1896, between Speyer & Co. of New York, Speyer Brothers of London, and the depositing Bondholders. Copies of such Agreement may be obtained on application at our office.

We will buy, on the terms of the Agreement, the Coupons and interest instalments maturing August 1, 1896, on deposited Coupon or Registered Bonds, in case the Baltimore and Ohio Railroad Company should make default in paying the same when due.

Trust Receipts will be given for Bonds deposited, and such receipts will be exchangeable for engraved Bearer Certificates. Application will be made to the New York and London Exchanges for the listing of these Certificates.

Speyer & Co. and Speyer Brothers will make no charge against depositing Bondholders for their services.

SPEYER & CO.,
11 BROAD STREET.

NEW YORK, April 21st, 1896.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 16, 1896.

A step nearer the adjournment of Congress was taken this week in progressing the River and Harbor bill. This measure was passed by the Senate by a very large majority on Wednesday. Conferrees were at once appointed on the part of the Senate, and on the following day, when the bill was returned with the Senate amendments to the House, conferrees were appointed on behalf of the latter body. The work of the Conference Committee will probably be expedited in view of the fear that the President will veto the bill, which carries appropriations amounting to over $70,000,000. Both houses will stay in session until the President has taken action upon it, with the view of endeavoring to pass it over a veto, if that should be necessary. It is probable that but little other legislation of consequence will be enacted before the date of adjournment.

A number of bills relating to the District of Columbia were passed by Congress this week. Of these, one of the most important was one abolishing days of grace on commercial paper. This bill, which was passed some time ago by the House, was adopted by the Senate without amendment. It provides that on all notes, drafts, checks, acceptances, bills of exchange, bonds or other evidences of indebtedness, made, drawn, or accepted by any person or corporation after the 1st day of January, 1897, and in which there is no expressed stipulation to the contrary, no grace, according to the custom of merchants, shall be allowed in the District of Columbia, but the same shall be due and payable as therein expressed, without grace. In thus putting itself in line with the legislation of the more important commercial states, Congress has communicated a further impulse to the movement for the abolition of days of grace.

The committee appointed at the recent national conference on international arbitration to present to President Cleveland a memorial embodying the resolutions adopted waited upon the President on Thursday. Mr. Cleveland told the committee that he was thoroughly and strongly committed to the doctrine of arbitration for the settlement of international disputes, and had so expressed himself in his communications to Congress prior to the Venezuelan troubles. He said he had read the resolutions now presented to him when they were adopted by the convention, and highly approved their moderation and wisdom. He had noted with pleasure and surprise the high character of the representatives from more than forty states, who had assembled of their own accord to give voice to their convictions on the subject. He promised to be ready, officially, to utilize all proper occasions for the accomplishment of the purpose the conference had in view, which, he declared, must be through the medium of an international treaty.

Preliminary proceedings on the part of the government of the United States looking to the adoption of international coins are authorized by a resolution favorably reported by the House Committee on Coinage, Weights and Measures. This resolution provides that the President be authorized and requested to invite an expression of opinion from the other principal commercial nations of the world as to the desirability and feasibility of the adoption of international coins to be current in all the countries adopting them at a uiform value, and to be specially adopted for invoice purposes. If the expressions thus obtained from other nations are such as in the judgment of the President to render a conference desirable, he is authorized to invite it at a time and place to be designated by him to consider and report a plan for the adoption and use of such coins, composed of gold or silver, or both. The President is authorized to appoint three representatives, subject to confirmation by the Senate.

The Raines law has already been in operation in New York for a little more than half a month, and the receipts under it for the issue of tax certificates have already amounted to over $3,500,000. Of this sum the state's share will amount to one-third, or not far from $1,200,000. The balance will go to the localities. Considerably more than half of the amount collected under the law was contributed by the cities of New York and Brooklyn. The share received by the state under the law will form no inconsiderable contribution to its revenues, though it may not reach the amount originally counted upon by the framers of the law. One of the incidents growing out of the enactment of the law is the increase in the number of clubs filing articles of incorporation at the state capital. This feature is generally regarded as growing out of the recent decision that the distribution of liquors in clubs does not constitute a sale, a view which, as far as the new law is concerned, may be contested by the state officials having its enforcement in charge.

Preliminary statistics of foreign trade for April and the ten months ending therewith show that the exports of merchandise for the month were valued at $70,944,343, an increase of nearly $5,700,000 as compared with the corresponding month of last year. The imports were valued at $58,705,299, a decrease of over $10,000,000 as compared with the corresponding month last year. The exports for the ten months were valued at $749,038,125, an increase of over $60,000,000 as compared with the corresponding period of the preceding fiscal year. The imports, on the other hand, were valued at $666,353,062, which represents an increase of over $62,000,000 as compared with the corresponding period of the preceding fiscal year. The exports showed an excess of $82,685,062, as compared with an excess of $84,024,089 for the corresponding period of last year. Gold exports for the month showed an excess of $2,639,764, as compared with an excess of imports of $2,029,761 for the corresponding month of last year. The exports of gold coin and bullion for the ten months ending with April amounted to $86,290,157, an increase of over $21,800,000 as compared with the corresponding period of the preceding fiscal year. The imports of gold for the ten months amounted to $30,301,054, an increase of over $2,100,000 as compared with the corresponding period of the preceding fiscal year. The exports of gold for the ten months showed an excess of $55,989,103 over the imports, as compared with an excess of $36,219,392 for the corresponding ten months of the preceding fiscal year.

Minister Dun, the diplomatic representative of the United States in Japan, is quoted in an interview had with him at San Francisco as saying that there has been unnecessary excitement about the competition of Japanese manufactured goods and Japanese labor with the products and labor of the United States. The minister says that he has received a number of inquiries about the matter, many of which relate to bicycles. He says that there is no such thing as a Japanese bicycle, but that the bicycles that the people use there are all made in the United States or in Europe, and so they will continue to be. In her own line Japan is going ahead, and rapidly, too, particularly in the manufacture of silk goods, and she is making great efforts, too, in cotton goods and cotton yarns. In the latter lines, Minister Dun says, they may affect European interests, but will not affect those of the United States.

While insisting on the maintenance of Spanish sovereignty over the island of Cuba, the speech of the Queen Regent of Spain, in opening the Cortes this week, contained a promise to establish a system of local administration in the event of the suppression of the insurrection in the island. The speech said that Spain is far from desiring her Antillesian subjects to return to live under an old and antiquated régime, when she enjoys such liberal laws. Without the insurrection, the speech says, Spain would never have refused any legitimate liberty. When the peace is reached, it will be necessary to give to both islands, Cuba and Porto Rico, an economical and administrative personality exclusively local, which will make possible the intervention of the country in its own affairs, but maintaining untouched the right of sovereignty and untouched the necessary conditions for its existence. To that end the government will bend its steps if that line of politics merits the approval of the Cortes. Regarding the attitude of the United States, the speech says that the correct and friendly conduct of the American republic, in the presence of the Cuban insurrection, is good proof that every day the ties of interest are developed and the friendship that unites them with Spain is made more binding.

A Washington dispatch says that it is understood that Ambassador Bayard and a representative of the British Foreign Office will this week formally exchange ratifications in London of the Behring sea sealing claims arbitration treaty, which was amended by the Senate on April 15 in minor particulars. Promptly following this formality, it is expected that the President will appoint the American arbitrator, and that a Canadian will be named to represent Great Britain. Under the terms of the treaty the two arbitrators will meet as soon as the cases are ready for consideration at Victoria, B. C., and determine the damages, if any, accruing to Canadian and other sealing vessels in Behring sea prior to the Paris tribunal. Under the provisions of this new convention the two arbitrators will take testimony at San Francisco if the cases cannot all be completed at Victoria, and they will then report their findings to the respective governments. Where their recommendations agree the claims will be promptly paid, but if any disagreements occur which cannot be settled by diplomacy, such cases will be delivered to the President of the Swiss republic, who has consented to decide the disputes.

THE MAY GOLD OUTFLOW.

Gold shipments to Europe, which begun on a limited scale during the month of April, have, since the beginning of the present month, assumed a magnitude and steadiness which would point to their continuance for a time. The total since the last week in April, inclusive of this week's shipments, is no less than $12,000,000, and the government's specie reserve has suffered a corresponding reduction from about $127,000,000 to $116,000,000. The shipments of the past fortnight have all gone to France or Germany. Current rates of exchange on London (4.88½ to 4.88¾ for demand sterling) certainly would not justify transfers of specie there to settle debit balances or to supply exchange for sale in the open market. From the fact, however, that certain houses are able to ship these sums of gold by each week's continental steamers, the inference is drawn that some small premium or inducement is offered, either on the part of one of the governmental banks of continental Europe, or, as is quite possible, arising out of arbitrage transactions in exchange between London and continental financial centers, and which, it can be readily understood, would have reference to the transfers of funds from London to France or Germany, in connection with the latter's recent heavy sales of South African and other mining shares. Under these circumstances, as this market has often witnessed in past years, the most feasible and profitable way of transferring specie is by means of a three-cornered transaction in exchange, the gold being taken from our Treasury and exchange sold upon London to defray its cost. Whatever may be the exact form which the inducements for the present shipments of gold assume, it is calculated that there must be either a natural or an artificial difference of about one-eighth to five-thirty-seconds per cent. between the price obtained for gold shipped to the continent and that forwarded to London. It is not necessary, of course, to pay particular attention to the rumors which have been in circulation in reference to the possible intervention of the Russian Treasury in this matter. The suggestion that it is obtaining an additional supply of specie through German and French bankers who are drawing it from this country has nothing definite to support it at the moment, although this very course was pursued when the Austro-Hungarian government was preparing for its resumption of specie payments.

As will be seen in the regular commercial reports of the week, the foreign exchange market is, at this time, almost entirely supplied by offers of bills drawn against these gold shipments. This situation, however, is by no means unusual at this period of the year. Taking the record of the month of May for some ten years back, in only two years, namely, 1895 and 1887, have the imports of gold exceeded the exports. In May last year there was an excess of imports to the amount of $4,444,000, and in 1887 more gold by $607,000 was imported than was exported, the movement, in fact, for that month being an insignificant one. On the other hand, the record of 1894 for the month of May gives an excess of exports of over $23,000,000; in 1893 the exports reached the total of $15,000,000. In 1892 they fell below the average, being $3,250,000, but in 1891 the total was no less than $30,000,000, and in 1889, again, the excess of gold exports was $12,691,000. It will be seen from this that the prevalence of a heavy outward current of the yellow metal during the current month is a rather normal process, and that the shipments now in progress might be kept up during the balance of the month at the same rate without rendering the loss an excessive one.

RAILROAD EARNINGS STILL SHOW GAINS.

April railroad earnings are, as a whole, fairly satisfactory, when the conditions ruling during that month this year and last are considered. A year ago in April the railroads of the country first began to show the influences of the improvement in general trade, which became marked in the later spring months. The first important gain, in fact, shown during 1895 was reported during the month with which the present year's figures compare.

The total earnings of 126 roads, with over 95,000 miles of track, aggregated $36,851,550 in April, 1896, a gain of 3.5 per cent. over April, 1895, which month, in turn, it will be remembered, showed a gain of 4.5 per cent. over April, 1894. This increase, it is true, is slightly smaller than that of March, when the gain was 4.6 per cent., March having one more business day than April, but is considerably smaller than the gain of 13.7 per cent. in February and of 11.3 per cent. in January over the corresponding months of 1895.

The following table, showing the increases and decreases in each month for the past three years, best illustrates the still favorable position held by railroad earnings for April and the four months' period of this year:

	1895.	1894.	1893.
May	Inc. 6.5	Dec. 17.5	Inc. 9.3
Five months	Inc. 2.5	Dec. 14.2	Inc. 4.0
June	Inc. 8.0	Dec. 22.0	Inc. 5.6
Six months	Inc. 2.5	Dec. 15.4	Inc. 4.5
July	Inc. 15.6	Dec. 19.0	Dec. 4.0
Seven months	Inc. 4.8	Dec. 19.0	Inc. 2.0
August	Inc. 1.6	Inc. .9	Dec. 13.0

December	Inc. 8.8	Dec. 1.1	Dec. 13.6
Twelve months	Inc. 5.2	Dec. 11.0	Dec. 2.1
	1896.	**1895.**	**1894.**
January	Inc. 11.3	Dec. .5	Dec. 12.0
February	Inc. 13.7	Dec. 2.3	Dec. 12.0
March	Inc. 4.6	Inc. .6	Dec. 13.4
Three months	Inc. 9.5	Dec. .5	Dec. 12.6
April	Inc. 3.5	Inc. 4.5	Dec. 14.3
Four months	Inc. 8.1	Inc. .9	Dec. 13.4

The showings made by the different groups in April are very generally in accordance with what was expected, in view of the generally quiet trade throughout the country. The following table shows gains or losses in April and the four months' period this year as compared with last, by groups of roads, compared with similar returns for the three preceding months:

	January, 1896.	*February,* 1896.	*March,* 1896.	*April,* 1896.	*Four mos.* 1896.
Granger	Inc. 22.0	Inc. 22.2	Inc. 21.0	Inc. 13.6	Inc. 19.4

Pacific	Inc. 17.0	Inc. 22.3	Inc. 17.8	Inc. 6.2	Inc. 14.5
Totals, U. S.	Inc. 11.3	Inc. 13.8	Inc. 4.6	Inc. 3.5	Inc. 8.4
Mexican	Inc. 5.7	Inc. 8.3	Inc. 4.3	Inc. 1.9	Inc. 3.2
Totals	Inc. 11.3	Inc. 13.7	Inc. 4.6	Inc. 3.4	Inc. 8.1

The granger roads, it will be seen from the above, still occupy the most favorable position as regards the volume of increase shown, with a gain of 13.6 per cent. in April this year over last. The other gains vary from less than 1 per cent. in the case of the trunk lines to 6.2 per cent. for the Pacific roads. Two groups, the coal roads and the southwesterns, show decreases of 1.8 per cent. and 3.8 per cent. respectively. Increases in April over a year ago are less numerous than in preceding months, as was to be inferred, in view of the reduced proportion of gain shown, and the granger roads show the heaviest number of increases in any single group. Of the 119 systems, embracing 126 roads, reporting for April, 69 show increases and 50 show decreases. Large increases are fewer than for some time past, but the small number of large decreases is also a feature worthy of note in this connection. The following systems report increases or decreases in excess of $50,000 each:

INCREASES.

Chicago, Milwaukee & St. Paul	$312,508
Great Northern	256,359
Canadian Pacific	199,000
Chicago Great Western	74,394
Minneapolis, St. Paul & S. S. M	70,641
Chesapeake & Ohio	70,883
Louisville & Nashville	87,181
Norfolk & Western	80,128
Mexican Central	53,202
Total	$1,204,296

DECREASES.

Cleveland, Cincinnati, Chicago & St. Louis	$67,579
Western New York & Pennsylvania	51,300
Missouri Pacific & Iron Mountain	83,000
Total	$201,879

The aggregate gain shown by nine of the large systems showing increases is in the neighborhood of $1,200,000, while the gain upon all roads is $1,249,000, pointing to the fact that the increases reported by the seven systems practically account for the entire gain in April.

The total earnings for four months ending with April this year aggregate $151,073,393, an increase of 8.1 per cent. over 1895, and follow an increase in 1895 over 1894 of about 1 per cent. In the four months' period, as in April, the granger roads occupy the most favorable position, with an increase of 19.4 per cent. over 1895. Other gains to be noted are those of the Pacific roads, 14.5 per cent., and of the southern roads, 9.6 per cent.

STATISTICS OF THE WORLD'S COMMERCE.

Reference has already been made to the special review of the commerce of the world which was compiled from consular reports and other sources of information as an introduction to the usual publication on the commercial relations of the United States for the years 1894 and 1895. A copy of this review is now at hand, and is found to contain a summary of more than ordinary interest. It is a decade and a half since a similar compilation was made by the State Department, owing to the pressure of additional work in the meantime upon the slender resources of the Bureau of Statistics. The force having in charge the compiling and editing of the consular reports is numerically the same as in 1880, before the monthly publication of consular reports was begun, but an improvement in the organization of the work has rendered the task of preparing a general review less formidable than it was formerly, and this fact, taken in connection with the increased interest manifested in the trade conditions of foreign countries, has prompted the preparation of the review referred to.

The main object of the review, as explained by Secretary Olney, is to set forth the special conditions of trade in the various countries which seem to offer favorable openings for the introduction of products of the United States, in order that the hindrances to, as well as the opportunities for, the expansion of the trade of the country may be understood. With this object in view, special care has been taken to particularize the classes of raw products and of manufactured goods consumed by each country, and the prospect of successful competition by the United States with other nations. Attention is directed to the recent increase in the percentage of exports of manufactured articles compared with the total volume of exports, as indicating that the United States stands upon the threshold of a great development of this branch of international trade, and the conclusion arrived at from the general review under consideration is that what is most needed to hasten this development is energetic action on the part of the manufacturers and exporters of the United States, after careful study of the special requirements of the nations whom they wish to secure as customers.

Anything like a comprehensive review of the 235 pages of statistical information contained in the volume under consideration is out of the question in this place. A reference to a few of the facts developed, however, will be of interest. A table indicating the distribution of exports from the United States among the six principal countries of destination shows that in the year 1894 the United Kingdom took exports from the United States valued at $431,059,267, or 48.3 per cent. of the total for all countries, and the British possessions $92,247,703, or 10.3 per cent. of the total, the combined takings of the British empire and possessions being $523,306,970, or 58.6 per cent. of the total of all exports. Then followed in order Germany with $92,357,163, or 10.4 per cent.; Canada with $56,664,094, or 6.4 per cent.; France with $55,315,511, or 6.2 per cent.; the Netherlands with $43,570,312, or 4.9 per cent., and Belgium with $28,422,989, or 3.2 per cent. of the total.

A similar table, indicating the six principal countries for the supply of imports to the United States, shows that in the year 1894 the United Kingdom furnished imports to the value of $107,372,995, or 16 per cent. of the total value of all imports, and that the British possessions furnished imports valued at $71,000,478, or 11 per cent. of the total, making a total of $178,372,473, or 27 per cent. of the whole, from the British empire and its possessions. Next in order came Brazil with $79,360,159, or 12 per cent.; the Spanish West Indies with $78,813,895, or nearly 12 per cent.; Germany with $69,387,905, or 11 per cent.; France with $47,549,974, or 7 per cent., and Canada with $30,790,916, or 5 per cent. of the total value of all imports.

Some tables dealing with the foreign trade of Cuba and Puerto Rico present certain points of interest, in view of the struggle that has been going on in Cuba for more than a year. The figures given show that the trade of the United States with those islands far exceeds that of any other country having dealings with them. The total import and export trade of the United States with the islands amounted to $101,659,924 in 1893–94, whereas that of Spain, in 1890, amounted to only $38,024,743, that of Great Britain (1893) to only $11,635,505, and that of France (1893) to only $3,551,200. The figures of imports from the islands show that they are mainly dependent upon the United States as a market for their products, this country taking $78,813,895 worth, as compared with $19,060,060 worth taken by Spain, $2,258,100 worth taken by France, and $635,557 worth taken by Great Britain.

AMERICAN BONDS ABROAD.

Dullness of the most profound character has settled upon the stock and security markets. London and New York alike share in the disposition in financial circles to do nothing and to wait for developments, as well as in the absence of any public demand for speculative securities or for investments that are not of the safest character. There have been few incidents in the market during the last two weeks, and among them the only important one, apart from renewed shipments of gold from this country to Germany, was the placing in London of a block of New York city 3½ per cent. bonds, amounting to about $4,000,000 in all. This is not a very large sum for foreign investors to take, but it is significant of the tendency now displayed by the British investing public, both to pay excessively high prices for first-class and indisputably safe securities, and to include in this class our municipal obligations or other bonds in cases where the standing and credit of the debtor fulfills the most exacting requirements.

The block of New York city bonds in question, issued this month, was the object of a spirited competition. It was noted that among the bids a large number were by houses which do an international business, and no surprise was therefore felt at the announcement that the prominent firm which secured the issue by a bid for all or none thereof would place the bonds on the London market. The cable advices this week state that the loan has just been offered there for public subscription, and that the price put upon them by the syndicate would make the income returned to the purchaser about 3 per cent. per annum. At this figure, however, the issue was oversubscribed for, although some question was raised at first with the authenticity of this report, and the interest aroused and success of the transaction have tended to draw further attention to American municipal securities on the part of the London financial public, though the absence of any large issues of first-class bonds of this description would, of course, impose a restriction upon activity in this field. It is, however, useful to note that at a moment when the London and other foreign markets are indifferent, if not opposed, to American securities of the more speculative class, or those which might be affected by the contingencies particularly in regard to the currency, this prompt expression of investing confidence should appear with reference to an American municipality, the credit of which has always been of the highest. This incident, however, is not alone. Some other blocks of bonds have been placed abroad by the Messrs. Morgan and other houses, though, with the uncertainty which London appears to feel in regard to the settlement of our currency question, there is a decided and, on the whole, natural disposition to wait. This, however, has not prevented the sale to foreign banking syndicates of some fairly good issues of reorganized railroad companies at attractive prices, though dealings of this kind have been far from equal to the exceedingly extensive bond negotiations which were consummated a year ago, and which at the time had such a marked effect upon foreign exchange, and during several months aided the Belmont-Morgan syndicate to avert gold shipments and a consequent drain upon the Treasury specie reserve. It is, however, evident that at the present moment the amount of our securities that are going abroad is very small. In fact, if the movement were normal in its dimensions the sale of such a small block of bonds as that involved in the bringing out of the New York city loan in London would not have attracted any great share of attention. Gold shipments have now recommenced, and are being made under conditions which seem to repeat our experiences while the Austro-Hungarian Treasury, acting through bankers on the continent, was replenishing its gold reserves at the expense of our own. Under such conditions nothing would have a more immediate and beneficial effect in checking such inroads upon the government gold reserve than the creation of a more active demand for our investment securities in London. In spite of the advice of the larger portion of the foreign financial press to their constituents to let "Americans" alone for the time being, there is such a latent demand, and an incident like that in connection with the municipal issue of bonds to which reference has been made is a decided indication to that effect.

THE JOINT TRAFFIC ASSOCIATION.

The meeting of the new trunk-line board of control held last week in New York was an important one, and the results would indicate that the railroad men consider the Joint Traffic Association a tangible success and are preparing to make it still more effective. With one or two exceptions, the railroad presidents whose roads form the association were present, and all expressed themselves in the most favorable terms with regard to the workings of the new agreement and the tangible benefit it is accomplishing in connection with rates and traffic. The presence of Sir Charles R. Wilson, the Grand Trunk's present executive chief, and the fact that he took a leading part in the proceedings, besides addressing the gathering on the railroad situation and the work that the Joint Association is doing, was regarded as significant of the altered relations of the Grand Trunk to its competitors. That road, once the chronic rate cutter and disturber of the peace, has under its new management been brought into complete harmony with the American lines, to the benefit, it may be expected, of its own earnings.

Among the incidents developed by the meeting was a statement by Commissioner Blanchard that since the association was constituted on January 1st of the present year, over one thousand separate subjects have been brought to the attention of the commissioners and committees. This represents an enormous amount of labor on the part of the officials charged with such duties, and it must be further considered that many of the subjects brought up, like that in relation to differential rates on grain, present the greatest difficulty, and will require long and careful consideration. It is thought, indeed, in railroad circles that one of the most encouraging circumstances connected with the new plan is that these many and troublesome questions have not resulted in any ruptures or withdrawals such as used to follow the formation of trunk-line pools, or so-called "gentlemen's agreements," between the rival roads.

The most important event in connection with last week's meeting was, however, the appointment of committees to take the necessary steps to bring the Canadian Pacific, Norfolk & Western and several other roads into the association. Both the Norfolk & Western and the Cincinnati, Hamilton & Dayton (the latter one of the roads that have not formally joined) were represented, and letters were received from President Van Horne, of the Canadian Pacific, and from others expressing their sympathy and promising coöperation with its objects. It would seem, indeed, that

the inclusion of the roads which are still outside the pale of the association is a necessity to its complete success, but that this work has now been taken in hand with vigor.

THE GREATER NEW YORK BILL A LAW.

The Greater New York bill became a law by the approval of Governor Morton on Monday. In his memorandum filed with the bill the governor points out that the territory embraced in the area of the proposed city aggregates nearly 318 square miles, and contains over 3,000,000 of inhabitants. The consolidation of great municipalities like those included in the law presents, naturally, questions of a complex character, to some of which the governor directs attention. He points out, for example, that in order to effect a proper consolidation of this territory with its divergent interests into one municipality, there must be provided a harmonious government, an equitable system of taxation, a fair adjustment of the several existing municipal debts, and a homogeneous arrangement of executive, judicial and administrative functions. Many of the existing functions, he points out, cannot be constitutionally amalgamated or disturbed by any attempted consolidation. The autonomy of the counties must be preserved until it is changed by constitutional amendment. Boards of supervisors must be reëstablished in the counties of Kings and New York, and the board already existing in the county of Richmond must be retained. The parts of the consolidated territory lying in the county of Queens will still remain in that county unless annexed to other counties, but such annexation cannot affect existing senate, assembly or judicial districts. Again, the constitutional offices provided for each county, including certain judicial tribunals, must continue. Certain police and administrative functions cannot be wholly destroyed or made subordinate to city supervision, and throughout the consolidated city there must continue to be a dual government, partly the creature of the constitution, under constitutional limits and restrictions, and beyond the control of the city government, and partly the creature of statutes providing for municipal government. One of the most important problems presented for settlement under the bill is the question how far the legislature may go in amalgamating city and county governments.

The governor, of course, recognizes what has already been pointed out by many critics of the law, namely, that the measure is not complete in itself, but can only become so by further action at the hands of the legislature. He notes that the bill declares in substance that consolidation shall become complete on January 1, 1898, but, he adds, this declaration evidently cannot have the full force which its terms would indicate, because no provision is made for the government of the consolidated territory, and it is expressly provided by section 2 that "for all purposes the local administration and government of the territories in section 1 of this act enumerated shall remain in and be performed and exercised by the respective bodies, politic and corporate, to which they are now intrusted, and except so far as hereafter changed by authority of law and for such purposes, and until such time, and except to such extent, the said bodies, politic and corporate, shall continue to exist, and to possess the same rights, properties, privileges and franchises, and to exercise the same powers and discharge the same duties and be subject to the same liabilities, and the various officers thereof shall be elected or appointed in the same manner as heretofore." By the terms of the bill, he continues, there can be no disturbance of existing conditions until the legislature has made further provision for the government of the new city, and, practically, the only effective provision in the bill is found in the third section, which provides for the appointment of a commission to prepare and submit to the next legislature "bills for the government of the municipal corporation, the mayor, aldermen and commonalty of the city of New York as by this act enlarged."

Governor Morton recognizes that the commission to be appointed to deal with the question will be charged with the performance of a difficult task, but while he takes note of the argument that it cannot within the brief time given by the bill prepare a charter for this great municipality which will be satisfactory to the next legislature and the inhabitants of the new city, as well as to the other people of the state, who necessarily feel a deep interest in this subject, he does not regard this possibility as furnishing a sufficient objection to warrant his disapproval of the bill. The governor recapitulates the substance of the objections made to the bill by the mayors of New York and Brooklyn, but he does not answer them, except by the suggestion that it may be properly assumed that a charter prepared by the commission will provide fair terms to all the localities affected, and that, as the mayors of the three cities are to be members of the commission, their suggestions will have great weight in framing a charter upon conditions favorable to their respective cities. All localities affected, he says, will be heard, and all interests will be considered by the commission, and until a charter or plan of government which may be prepared shall be approved by the legislature, there can be no change of existing conditions. He recalls his own recommendations to the legislature last year, and the failure of the legislature to act upon them, and finally declares that he has no hesitation in expressing the conviction that the commission to be appointed will be able to devise a scheme of municipal government alike creditable to its members, competent for the great purposes desired, and promotive of the highest interests of the state.

LAKE ERIE AND WESTERN'S YEAR.

While not a large or important system of lines, the Lake Erie & Western Company occupies a position of some prominence among the railroads of the central western states. Indeed, there have within the past year been a number of significant developments, which might indicate that in time it will be the nucleus of a very extensive system of roads under one management. The interest which is credited with holding the control of Lake Erie & Western has secured a number of other lines in Ohio and Indiana, and is building connecting links which will give the "Brice System," as it is already called, access to Cincinnati and other important points. The plans of Mr. Brice and his associates have not been fully developed, but the success which has attended their administration of the Lake Erie & Western would indicate that they possess both the financial strength and the skill necessary to build up and develop a valuable property from a slender foundation.

The Lake Erie figures for the year 1895 may, therefore, be examined with interest. The report, which has just been issued, embodies the following comparison with the results of the preceding year:

Year.	1895.	1894.	*Changes.*
Gross earnings	$3,519,104	$3,345,403	Inc. $173,701
Operating expenses	1,916,144	1,865,852	Inc. 50,292
Net earnings	$1,602,960	$1,479,551	Inc. $123,409
Charges	701,786	682,982	Inc. 18,804
Balances	$901,174	$796,569	Inc. $104,605
Dividend on pfd	592,000	592,000	....
Surplus	$309,174	$204,569	Inc. $104,605

The mileage of the company remained unchanged at 725 miles, and while the ratio of operating expenses was reduced from 55¾ per cent. to a little less than 54½ per cent., there was about $246,000 expended for betterments and improvements, as against an outlay of $143,000 for the same purpose in 1894.

The management, it may be remarked, is frank in dealing with the question of the surplus, the president saying in the body of the report: "It is proper to call the attention of the owners of the property to the fact that while the net earnings have handsomely increased, and a considerable surplus of assets has accumulated in the treasury of the company, which would apparently justify the payment of the full rate of dividend to which the preferred stock is entitled, yet, in view of the large and extraordinary expenditures (some $600,000) involved in equipping all of the company's cars with air or power brakes, costing $70 per car and $500 per engine, and automatic couplers, costing $20 per car, prescribed by the Interstate Commerce law to be made by December 31, 1897, together with the necessity of adding to the equipment from time to time, it has seemed wise to defer the increase of returns to stockholders until these extraordinary expenditures shall have been fully provided for."

A most important matter for the future of the company is the lease of the Northern Ohio Railway, formerly known as the Pittsburgh, Akron & Western, of about 166 miles in length. This action is pointed out as the following of the policy adopted when the present management assumed charge, and which consists in providing it with fresh outlets and feeders—in short, providing for the steady expansion of its earning power. From this it has resulted that the property, which in the past could not earn interest upon a debt of $10,000 per mile, is now able to meet full interest charges and to pay 4 per cent. or 5 per cent. on the preferred stock.

TO STIMULATE EXPORTS.

The need of developing adequate foreign outlets for the surplus products of American industry has been written and talked about so much as to have made it almost a truism, and yet it is probably a fact that no better spur to the movement toward actually opening up these outlets could have been imagined than the intense depression under which the industries of this country have been and are now laboring. Bitter experience has brought home to those engaged in industrial production the truth long recognized by economists that the productive capacity of this country's manufactures has long exceeded the domestic demand, and that a foreign trade in American products is no longer only a desirable feature but an absolute necessity, if the industries are to be preserved from absolute ruin. The lessened demand for what might be termed the natural products of the country, the great cereals, provisions, and, in fact, agricultural products of every line, has made it necessary that the consumption of these products should be enlarged if the vast number of persons employed in those last mentioned industries are to be profitably occupied. The only way out seems to be the development of a large export trade in the products of American machinery and labor.

That a large portion of the manufacturing interest has its eyes open to this need is constantly being proved by the statistics of our growing export trade. BRADSTREET'S pointed out last week that the exports of manufactured goods are now fully one-quarter of all our exports, and, further, that this trade tends to gradually enlarge.

It is, however, certain that the rate of expansion from year to year is too slow to meet the exigencies of the case. It is probable that twice the value of last year's exports, which amounted to $200,000,000 in value, could have been shipped during 1895 without appreciably affecting prices. Yet, this enlarged shipment, were it possible, would in a great measure have furnished a solution, temporarily, at least, of nearly all the troubles which menaced domestic trade. Any legitimate method of providing such an outlet, therefore, is certain to be cordially welcomed by all concerned not only in the progress of the manufacturing interests, but also in the welfare of the country at large.

About six months ago BRADSTREET'S took occasion to commend the establishment in Philadelphia of a commercial museum, modeled, to some extent, upon the plans so successfully put in operation abroad, but also providing for some modifications and improvements not embraced in foreign museums, and designed to meet American business conditions. Working as it was under the direction of public-spirited citizens of Philadelphia, and liberally supported by the municipality of that city, considerable progress had been made in providing the necessary plant and apparatus for displaying to Americans exhibits of the products of other countries, and pointing out in turn the direction in which a trade in the products of this country might be profitably built up. It was shown that this enterprise, though located in Philadelphia, was not designed to work upon the comparatively narrow lines of a city's or even a state's productions, but was designed to be of value to the country as a whole, and particularly to the manufacturers thereof. The advantages which the Philadelphia museum already possessed in having obtained large numbers of exhibits from the World's Fair were referred to, as were also the projects then entertained by the museum's directors for expanding the scope and power of the undertaking in all directions.

A visit to the museum this week by a representative of BRADSTREET'S enables us to report something of the progress which has since been made in the work of building up this institution. One conclusion easily reached is that the Philadelphia museum is no longer an experiment, and that what might be called the missionary work of the past year is bringing abundant fruit. Continued loyal support from citizens and from the city of Philadelphia has been supplemented by enlisting the aid of the State Department at Washington, and by obtaining the coöperation of nearly all the important boards of trade and other commercial bodies in the larger cities of the United States and of many cities in South

America, while the work of the staff of the museum at home and abroad has also met with flattering success. The gathering of samples of foreign goods entering all the leading countries of South America, Africa and Australia, in which countries American export trade tends to expansion, is steadily progressing, and the work of the museum's agents in this country and abroad has even now resulted in important concessions being obtained, which are expected to inure directly to the benefit of our export trade.

The work of the Bureau of Information of the Philadelphia Museum has been developed along lines designed to bring to those interested in American trade all possible information regarding trade in the different countries of the world. The multiplicity of the detail connected with this work can only be appreciated by long study of the workings of the bureau. The collection of trade papers, consular reports, statistics of all sorts, books of reference and other printed matter, wherever published, throwing light upon the course of trade at home and abroad, has been only a small part of this bureau's work, and yet it has resulted in the collection of a vast quantity of useful information which is to be a part of the library of the museum. By a system of cross indexes, modeled upon that in use in the public library, this information will be made readily accessible to the officers of the bureau, and through them to the interested public. Another part of the bureau's work has been the establishment of a species of consular reporting system partly through the consular officers of this country abroad, but also largely through the museum's own correspondents. This branch of work is designed to investigate the conditions governing the export trade of the different countries in products in which the United States excels. Printed forms giving the names of the articles on which reports are desired have been distributed throughout the world, particularly in the countries above mentioned, and already this department has placed at the disposal of the museum a quantity of information of the utmost value to most American manufacturers, while every mail from abroad brings in increasing quantities of these reports. Full particulars as to these goods, their character and variety, the countries of origin, with the names and addresses of manufacturers, statistics of the quantities of goods annually imported, the wholesale and retail prices paid in the various countries, transportation and tariff rates, the character of the packing, the names and addresses of merchants handling the goods in the importing countries, and the character of the field and distribution in those countries, are ably covered by this system.

Still another branch of this bureau's work deals with the strictly American side. The collection of names of American manufacturers, with descriptions of their products, the cost of goods at cities where made and at the nearest or most convenient shipping ports, and enlisting of these same manufactures in the work of the museum directly or through the commercial bodies of those cities, are among the objects sought in this direction. The obtaining of a concession from the republic of Venezuela allowing the exhibition in that country, through the museum's officers, of American goods free of duty till sold for consumption is one special achievement of the museum from which much is hoped for. Already the museum has received from Venezuela alone 800 samples of foreign manufactured goods, with which American products will have to compete, and within the next two weeks it is expected that over 2,000 such samples will have been received from South America alone, with all data concerning them. The appearance of some of these samples, with retail prices in Venezuela, makes it appear certain that a large and profitable field for American manufactures exists in that and other South American countries.

Some misconception as to this museum's being designed solely for the use of manufacturers may be met with, but this is groundless. The institution, it is true, aims to bring the American manufacturers and the South American distributors closer, but it seems hardly likely that the advertisement thus secured for American goods can be otherwise than beneficial to the commission interests, which, on account of the conditions as regards credits and other features, are destined to handle a large portion of the trade which it is hoped to develop. Much of the above labor of the museum, it may be necessary to state, is in the nature of preparatory work. The vast quantity of detail work still necessary will prevent the museum's actually opening to the public much before November, when it is expected President Cleveland will officially dedicate the museum to its great work.

During the present month a private view of the museum will be given to delegates appointed by boards of trade and chambers of commerce in most of the leading cities of the country, which will enable those representative men to obtain a satisfactory idea of the plan and scope of the enterprise. When finally opened in working order this museum seems certain to occupy a unique position in this country, and, if the hopes of its friends are realized, bids fair to surpass anything of its kind which exists abroad. The information will be open to all those interested upon payment of a merely nominal fee, and any manufacturer, business man or other person interested may receive reports adapted to his special needs, the reports being made up and reaching them direct, probably far in advance of the time that any government enterprise, here or abroad, would take to do similar work. That the Philadelphia museum has come to stay and will hereafter be a leading feature of that city seems certain, from the fact that a permanent home for its use is now being planned to be built upon land already donated for the purpose. If, as seems most likely, the museum accomplishes but a small part of what it is designed to do, it will certainly do much towards opening the markets of the world to the products of the skill, the capital and the labor of the United States.

THE INTERSTATE COMMISSION AND FREIGHT RATES.

An important decision has just been rendered by Judge Acheson, in the United States Circuit Court at Philadelphia, in which the ground is taken that the Interstate Commerce Commission cannot fix freight rates. The case in which the decision was rendered arose upon a complaint filed with the commission in October, 1888, by Coxe Brothers & Co., of Drifton, Pa., who were miners and shippers of anthracite coal, against the Lehigh Valley Railroad Company, charging that company with specified violations of the provisions of the Interstate Commerce law. The complainants contended that the Lehigh Valley Railroad Company discriminated against them in the rates for carrying coal in favor of the Lehigh Valley Coal Company.

The commission found that the rates and charges established by the defendant and then in force over and upon its lines of railroad for the transportation of anthracite coal from the locality known as the Lehigh anthracite coal region, in Pennsylvania, to Perth Amboy, in New Jersey, were unreasonable and unjust, and on March 13, 1891, the commission made an order directing that the charges should not be over a certain rate per ton named. The railroad company did not obey the order, and the Interstate Commerce Commission applied to the United States Circuit Court for an injunction to restrain the railroad company from the further violation of the order and for its enforcement. The railroad company filed an answer denying that the rates established and charged were unreasonable or unjust, and alleging that the findings of fact by the commission which led it to the conclusion that the rates charged by the defendant were unreasonable and unjust were erroneous and against evidence, etc.

In his decision Judge Acheson, after reviewing the circumstances of the case, said that the railroad company's report for 1887, upon which the commission based its estimate, did not furnish data by which the actual cost of carrying coal from the Lehigh and Mahanoy mines to Perth Amboy could be ascertained; that the commission, therefore, resorted to an estimate of the carrying cost; that that estimate rested upon an erroneous principle and was unreliable, and that the order based thereon could not be sustained and was not to be judicially enforced. The railroad company raised the objection, among others, that the commission was not authorized to fix rates of transportation under the Interstate Commerce law. Upon this point Judge Acheson said that since the argument of the case before him the question had been considered by the Supreme Court of the United States in the cases of the Cincinnati, New Orleans & Texas Pacific Railway Company et al., appellants, vs. the Interstate Commerce Commission, and the Interstate Commerce Commission, appellant, vs. the Cincinnati, New Orleans & Texas Pacific Railway Company and others. Judge Acheson followed the Supreme Court in adopting the view expressed by the late Justice Jackson, when Circuit Judge, in the case of the Interstate Commerce Commission vs. the Baltimore & Ohio Railroad Company, whose judgment was affirmed by the court, that subject to the two leading prohibitions that their charges shall not be unjust or unreasonable, and that they shall not unjustly discriminate so as to give undue preference or disadvantage to persons or traffic similarly circumstanced, the act to regulate commerce leaves common carriers as they were at the common law, free to make special contracts looking to the increase of their business to classify their traffic, to adjust and apportion their rates, so as to meet the necessities of commerce, and generally to manage their important interests upon the same principles, which are regarded as sound, and adopted in other trades and pursuits. These views of the Supreme Court, Judge Acheson said, decisively show that the Interstate Commerce Commission was not clothed with the power to fix rates which it undertook to exercise in the case before him.

CONSUMPTION OF WHEAT.

To the Editor of BRADSTREET'S.

SIR.—The result of the extensive investigation of wheat consumption carried on by BRADSTREET'S is an important contribution to this interesting question. Until the schedules are presented in full it will not be possible to thoroughly analyze the facts which have been gathered, but the summary appearing in last week's issue seems to indicate some fundamental errors in the treatment of the data gathered. The conclusion that the claim of a decreasing rate of consumption or a heretofore overestimated rate is unwarranted is in agreement with the facts which I have from time to time presented in discussions of the question, but the further conclusion that, instead of "4⅔ bushels of wheat, as the Agricultural Department has believed it to be, it is about 5.387 bushels," does not appear entirely warranted even by the figures given in support of it.

The 4⅔ rate established by Mr. Statistician Dodge applies to the aggregate population, including all ages. The 1,163 replies used as a basis for the table which you presented last week cover 30,227 people, or 26.07 individuals for each return. As the average family in 1890 included but 4.93 persons, it is evident that the unit in your investigation is not the family. Your units undoubtedly include an excessive proportion of hotels, large boarding-houses, penal and charitable institutions, military establishments, and other large groupings of persons fed from a common source. On this account of the 30,277 persons reported for, the proportion of adults is undoubtedly much larger than the proportion that adults bear to our total population. It is decidedly an error to assume that our total population, including all ages, has an average consumptive power equal to the average of a group of adults, or a group in which adults form a larger proportion than they do of the general population.

This question of the consumptive ability of individuals of different ages is highly important in the determination of an average rate which shall be applied to the whole population. Col. Carroll D. Wright, Commissioner of Labor, in his very extended investigations into food consumption, has classified the consuming power of the various age elements of our population as follows:

	Units of food cons'n.
Adult men	100
Adult women	90
Children 11 to 14 years	90
Children 7 to 10 years	75
Children 4 to 6 years	40
Children 1 to 3 years	15

This classification is the result of scientific study of the question and is probably as perfect as can be devised. It should be used in reducing the figures of consumption shown on your schedules to a position in which they would be comparable with averages for the whole population.

Not having access to the individual schedules upon which your table is based, it is not practicable to undertake to make the proper age allowance and correspondingly reduce your average of 5.387 bushels. It is evidently, however, safe to assume that the data which you have gathered, when properly treated to reach a correct average, as is the case with the official data gathered by the Bureau of Labor, will substantiate the position I have always maintained in discussion of the question, that the Dodge estimate of 4⅔ bushels is reasonably correct, and certainly conservative.

I trust that BRADSTREET'S, with its

especial facilities for such work, will continue this investigation, giving the data gathered such scientific consolidation as will yield results which may be accepted as average. Truly yours,

Chicago, May 11. B. W. SNOW.

[The foregoing temperate criticism of BRADSTREET'S account of an experimental test of the rate of consumption of wheat per capita per annum, published last week, is published by request. Space is given it the more willingly because of its manifest lack of bias. It is regretted the same cannot be said of some who have risen within a week to find fault. It may be well to re-explain what so many of our readers apparently overlooked in their evidently hurried examination of our report. The test, such as it was, is distinctly stated in BRADSTREET'S of May 9 not to have been regarded in any sense a "demonstration" of what it set out to discover and apparently indicated. With a view to ascertaining the truth so far as possible, BRADSTREET'S addressed inquiries bearing on the question of the consumption of wheat per capita to a large number of individuals and a small number of institutions, more or less public. The returns, which appear to be of value, cover perhaps 25,000 individual instances, together with the rate of consumption in various institutions, also specified. The number of children under one year of age, reported in families making reports, was eliminated, and so stated. No pretense was made that the result of an investigation concerning the rate of wheat consumed per capita by 30,000 individuals in and out of institutions, even those scattered throughout the length and breadth of the United States, could necessarily be conclusive. It was declared, however, that the results of such an inquiry were of interest and, it was believed, of some value. That the returns were based upon the consumption of wheat during the month of March was not due to our belief that the quantity of wheat consumed in that month represents exactly one-twelfth of the quantity consumed in a year, but to the more important fact that it was the next preceding month to the date of our inquiry. To those of our critical friends who are interested to know, we will state that the "conjectures" of some of them as to what is or is not the case regarding the consumption of wheat, with which they attempt to demonstrate the absurdity of some of the facts reported in our article of May 9, are at best conjectures. Furthermore, it should be pointed out that the building up of any great and important structure requires a far different type of workman than the ability to sit around and point out defects which may possibly exist in the building. But, in order that there may be no misunderstanding, we will repeat that BRADSTREET'S report concerning the annual consumption of wheat per capita was not thought or intended to be a demonstration of the case. It was merely a preliminary, experimental inquiry over a limited area. It appeared to show a much higher rate of consumption of wheat than had been thought possible. It is probable, notwithstanding the elimination of the child under one year of age, and the consumption of wheat during March instead of during one of the midsummer months, that an extended examination of this question would show a higher rate of consumption than 4⅔ bushels per capita per annum. This opinion was expressed last week, and seems to have excited the critics, who, on the whole, think differently. At best, our suggestion, just repeated, was a conjecture of our own. It is possible that expensive and absolutely valueless inquiries like these, from a commercial point of view—investigations made purely in the interest of the general public that the truth may be known—it is possible, we repeat, they may be of a character which everybody and every bureau is engaging in. If so, we have failed to learn that fact. Waiving that point and the doubts cast upon what our report shows (which may be or may not be well founded), it is entirely probable that BRADSTREET'S may at some future date undertake a much more widely extended inquiry on this point. Whatever facts may result will be made public, as in the recent instance, whether they please or do not please the preconceived notions of statistical propriety or method of any one.—Editor BRADSTREET'S.]

THE FUTURE OF KAFFIRS.

Prince Bismarck is reported to have once said that President Paul Kruger, of the South African Republic, was the ablest diplomat with whom he had ever come in contact during his career. The events of the past six months would certainly confirm this high estimate of "Oom Paul's" ability. Each successive development has left him in more complete mastery of the situation, and at the present moment the destiny of South Africa, for both Boers and Uitlanders, is in the hands of the shrewd, stout-hearted old burgher.

The suspension of the death sentence imposed on the four convicted reform leaders has now cleared the air, and the latest advices, indeed, indicate that President Kruger and his advisers have no idea of crippling the gold industry of the Rand by any drastic steps. In fact, it is understood that, as soon as the situation permits, the imposition of moderate fines and perhaps short terms of imprisonment on the leaders, and nominal penalties on the rank and file of the reform committee, will end the matter. It is perhaps likely that this will depend more or less upon the outcome of the trial of Dr. Jameson and his freebooters, as well as on the disposal which the British make of Cecil Rhodes and the Chartered Company. The conclusion from the state of affairs is that Kruger will carry his point and that the Boers will dictate the terms of settlement.

At the same time the "boom" in the Transvaal is manifestly over. South African mines can no longer serve as a vehicle for unlimited speculation. Perhaps the industry is all the better for this, and will in a short time be upon a much more conservative and sounder basis. Commenting on this, the London *Financial News* says in a recent issue (before the publication of the telegrams incriminating Mr. Rhodes were given out):

"When the reform leaders confess that it is no longer judicious to maintain an attitude of opposition to the Transvaal authorities, the latter have less temptation to visit with severe penalties the doings of the past. Of course, the prisoners will be punished; that has been inevitable from the first, but they will not be subjected to treatment savoring of revenge. They should soon be back at work again in Johannesburg, putting fresh life into the mining industry, and, if possible, repairing the split that has taken place in the mining community. They will find the labor difficulty solving itself, thanks to the action of the Portuguese authorities, who have now arranged to allow Kaffirs to cross their borders into the Transvaal. A force of 10,000 extra 'boys' is thus made available, and this should enable all the mines to resume work at their fullest capacity. The monthly returns of gold may not resume their rapidly progressive character for some time, for labor will have to be concentrated on development in a number of the mines where this most important feature of the work had to be partially neglected so as to turn the attenuated labor force on to stoping to keep the mills going. The supply of labor is far more important to the Rand than the negotiations between Mr. Chamberlain and President Kruger, and we think far more of the pending arrival of 10,000 'boys' from Mozambique than of the decision of the President not to come to London. It must not be forgotten that the very smallest concessions by the Boers would be a distinct gain, and if only one or two of the grievances of the Uitlanders were remedied the mining community would be more free and prosperous than it was last year; and nobody can say the Rand did not do very well then. After all that has happened, Kruger dare not, if he were so minded, make the lot of the Uitlanders harder, and now that he has developed a penchant for clemency and magnanimity, he may make it a trifle easier, and, knowing how the Rand prospered last year, when its burdens were sorest, let us think how it may flourish were they even slightly relaxed."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

A favorable report has been ordered by the House Committee on Interstate and Foreign Commerce on the Mahon Nicaragua Canal bill, as amended by the subcommittee. As reported, the bill provides that the canal company shall have a capital stock of $100,000,000, the shares to be non-assessable, and the number not to be increased except with the consent of Congress. It provides that if the canal company shall, within nine months after the passage of the act, show that all the shares heretofore issued, except those issued to Nicaragua and Costa Rica, have been called in and canceled, the Secretary of the Treasury shall subscribe in behalf of the United States 700,000 shares ($70,000,000) to the capital stock of the company in return for the guarantee of the bonds to be issued by the company. Ten thousand shares of stock shall also be issued to the holders of the stock surrendered. The directorate is to consist of eleven members, one each to be appointed by Nicaragua and Costa Rica, one by the canal company and eight by the President, with the advice and consent of the Senate.

Under the bill, the expenditures of the canal company found to have been expended since June 3, 1889, are to be paid in capital stock, provided they shall not exceed $4,500,000. The company is authorized to issue $100,000,000 of thirty-year 3 per cent. bonds, guaranteed by the United States and redeemable at the pleasure of the United States after ten years. The bonds are to be secured by first mortgage on all property of the canal company. A sinking fund for the redemption of the bonds is provided for, and in case of default by the canal company in any respect the United States is authorized to foreclose. The earnings of the company shall go first toward the payment of the interest on the bonds guaranteed by the United States; dividends on the stock not exceeding 5 per cent., and the balance is to go into the United States Treasury as a sinking fund.

CURRENT BUSINESS NEWS.

Industrial.

The strike at the yard of the Newport News Shipbuilding and Dry Dock Company, which affected more than 2,000 men, has been settled. At a meeting the employees decided to give the Bundy clock time-keeping system, the introduction of which caused the strike, a 30 days' trial. Many of the former workmen employed have left the city, but may return. The strike lasted a week.

The *Iron Age* says: "The (Pittsburgh) market is practically lifeless. A sale of 1,500 tons of Bessemer to an Ohio steel plant at a shade under $12 at valley furnace is the only transaction of the week. Some of the Valley furnaces will probably blow out in a short time unless a better demand comes for iron. Outside of a few sales of steel by middlemen there is nothing doing. Billets can still be had at $19.50, Pittsburgh, or less, but there are no buyers.

Seventy manufacturers of cotton and woolen goods met in Atlanta, Ga., this week and organized the Southern Textile Association. Dr. McAden, of New Orleans, was elected president, and Thomas Martin, of Atlanta, secretary.

The *Iron Age* says that "although there have been quite a number of changes, the current production of pig iron remains practically stationary, at a rate which the accumulation of stocks shows to be excessive. The weekly capacity of all the furnaces on May 1 compared as follows with that of preceding periods:

	Furnaces in blast.	Capacity per week, gross tons.
May 1, 1896	194	188,319
April 1	200	187,451
March 1	207	189,583
February 1	215	198,599
January 1	241	207,481
December 1, 1895	242	216,797
November 1	239	217,306

A Cleveland, Ohio, dispatch says that "in six months from this date the Standard Oil Company will close its immense plant in that city and withdraw one of the largest industries of Cleveland. About 400 men will be thrown out of work."

The Premier Steel Works, at Indianapolis, "which has been in the hands of a receiver since May, 1893, lying idle, has been leased to a syndicate composed of the American Tinplate Works, of Elwood, and the American Wire Nail Company, of Anderson."

In Boston between 300 and 400 painters who failed to receive the demanded increase in wages from $2.40 to $2 50 per day have refused to go to work. The advance was granted to about 1,000 painters.

The expected general strike of the union carpenters for an eight-hour day and 25 cents per hour did not take place in Detroit last week, not more than 100 carpenters employed by different firms going out.

The carpenters strike in Newark, N. J., has ended in a compromise, and 1,200 men have returned to work. Through the efforts of General Secretary McGuire, of Philadelphia, the bosses agreed to give the men $2 50 a day until August 1, and $2.75 thereafter, with eight hours on Saturday. The men asked for $2.75 per day, uniform scale.

The Chattanooga *Tradesman* says: "In all sections of the south are new mills and new organizations to build cotton, woolen and knitting mills. Mills in operation are not encouraged to increase outputs by present prices, which are low and irregular.

The Hamilton mills, at Amesbury, Mass., has resumed operations after a suspension of three weeks.

A general cut-down in the wages of the employees of the York Mills, at Saco, Me., has been posted, to go into effect May 25.

Commercial.

Three Chicago elevators in the Armour system have been declared "irregular" by the directors of the Board of Trade.

The New York *Engineering and Mining Journal* says: "The anthracite coal trade shows but little change from last week, and the business now doing is principally of a hand-to-mouth nature. There have been rumours of bidding on new orders at the May schedule prices, but, of course, nothing of any consequence has been done, or will be done, at these figures for some time to come. The advance in the circular will make dealers try the 'shopping' tactics of the past, and the true strength of the market will be tested."

Mr. Corliss, of Michigan, has offered in the House of Representatives a joint resolution requesting the President to invite the leading commercial nations of the world to join in an international money conference to be held as early as practicable during the present year. The proposed conference is to be held in Washington, and $100,000 is appropriated for defraying expenses.

The New York *Chronicle* reports the cotton acreage of 1894 at 20,107,247, that of 1895 17,767,663. This appears close in line with various reports and estimates since January. Many correspondents claimed in April the acreage was 20 to 30 per cent. larger than last year, and now practically agree with the government report. "Several say the Texas acreage has been increased at the expense of corn and oats planting, as many planters were not disposed to sow only oats or plant only enough corn for home use. As a general thing the plant is reported in good condition. The Mexican weevil is reported in a few towns in Texas."

The final wheat crop report, based on primary receipts, as long suspected, indicates about 500,000,000 bushels. Last year crop reports were believed in by the country trader and speculator, who followed "the man in the air" until prices advanced 20 cents per bushel in May, and in December 53¾ was the cash price, and the crop was reported as 467,000,000 bushels.

The project of the North River Bridge Company to obtain heavy traffic by means of a structure that will extend from the bridge to the battery, New York city, is explained with some new details. From the plans which are in the hands of engineers, and which have been agreed upon by the trustees of the New York and New Jersey Bridge Company, the extension and approaches of the bridge will far exceed the original ideas of construction. It is now proposed that the bridge shall be supplied with an enormous feeder, which shall extend from the terminal of the bridge in this city down West street and the avenues along the river front to Battery park. The plan, in brief, provides for a steel structure 100 feet wide, with four tracks, connecting with all the docks on the North river below the bridge. There will be a descending grade of 35 feet to the mile from the bridge to Desbrosses street, where the elevation is to be 23 feet above the street level. From Desbrosses street it is to be continued with an elevated structure 23 feet high to the Battery.

Financial.

The following securities were sold at auction this week at New York:

2 Shares Chemical National Bank, $100 each	4,260
50 Shares Third Avenue Railroad Co., $100 each	179⅜
15 Shares Atlantic Trust Company, $100 each	177½
5 Shares Guaranty Trust Company, $100 each	400
5 Shares State Trust Company, $100 each	190⅞
62 Shares Nyack & Northern Railroad Company, $100 each	$65 lot
50 Shares Bergen Turnpike Co., $10 each	$4.25 per share
$5,000 State of South Carolina bonds, with coupons attached from Jan. 1, 1872, to July 1, 1888—four of $500 each and three of $1,000 each	$55 lot
1 Share Chemical National Bank, $100	4,255
800 Shares Retsof Mining Company common (hypothecated), $100 each	75c. per share
237 Shares New York Biscuit Co. (hypothecated)	97
230 Shares Pennsylvania Coal Company, $50 each	336⅜
10 Shares Van Wagoner & Williams Hardware Company preferred, $100 each	$3 lot
10 Shares Van Wagoner & Williams Hardware Company common, $100 each	$1 lot
10 Shares United States Mortgage & Trust Company, $100 each	210
200 Shares North American Company (hypothecated), $100 each	5¼
$100 Denver Union Water Company 1st mortgage twenty-year 5 per cent. gold bond, due 1914, coupons January and July, interest paid to January 1, 1896	55
50 Shares Bank of North America, $70 each	132
74 Shares American Surety Company, $50 each	159
30 Shares Lawyers' Surety Company, $100 each	95
$1,000 Lehigh Zinc & Iron Company 1st mortgage 6 per cent. bond, registered, due June 1, 1899, coupons January and July	95
3 Shares American Telegraph & Cable Company, $100 each	93¼
140 Shares Spanish-American Iron Company, $50 each, represented by trustee's certificate (hypothecated)	$100
$20,000 McGregor Empire Compress Company 6 per cent. coupon gold bonds, of McGregor, Tex., with July 1, 1896, coupon attached	11
10 Shares of capital stock, par value $100, of the Columbia Granite Construction & Manufacturing Company	$2

The American Express Company has declared a semi-annual dividend of 3 per cent., payable July 1.

The Hecker-Jones-Jewell Milling Company has declared a quarterly dividend of 2 per cent. on its preferred stock, payable June 1.

Railroads.

The all-rail east-bound shipments of dead freight from Chicago last week were 64,446 tons, against 63,830 tons the previous week and 43,931 tons the corresponding week of the previous year.

A meeting, at which the six National Orders and Brotherhoods of Railway Employees were officially represented, has been held at St. Louis, and resolutions have been adopted for the formation of a federation of the six organizations. The American Railway Union was excluded.

A Chicago dispatch says it is reported that a new traffic association is being organized which is to have "the general control of all traffic affairs between the Rocky mountains and the Atlantic coast, and contains within its limits all the roads now members of the Western Freight and Passenger Association, the Joint Traffic Association and the Southern States Association."

The triennial convention of the Brotherhood of Locomotive Engineers of America was opened in Ottawa this week, with Chief Arthur in the chair.

Miscellaneous.

The Lehigh Valley Railroad coal rate case, originally raised by Mr. Eckley B. Coxe, has been decided by Judge Acheson "upon the lines laid down by the Supreme Court a few weeks ago and extensively commented upon at the time. The Interstate Commerce Commission has legal authority to determine whether a given rate is reasonable or not, but it has not the authority to fix rates in advance."

Mulhall gives statistics of the productive energy of various countries which show that the aggregate of all the energies in use in the United States in 1820 was equal to 440 foot tons per capita. In 1890 this had increased to 1,940 foot tons, and the position of the other countries was as follows: England, 1,470 per capita; Germany, 902; France, 910; Spain, 590; Austria, 560; Italy, 380. A foot ton is calculated as the amount of lifting work that an unaided man could do in 10 hours.

A bill has been favorably reported to the House providing for the appointment by the President of a commission of five persons, whose duty it shall be to investigate the alcoholic liquor traffic, its relation to revenue and taxation, and its general economic, criminal, moral and scientific aspects in connection with pauperism, crime, social vice, the public health and general welfare of the people; and also to inquire into and take testimony as to the practical results of license and prohibitory legislation for the prevention of intemperance. An appropriation of $10,000 is made to defray the expenses of the inquiry.

The Atlanta Exposition buildings, at Piedmont Park, Atlanta, Ga., are to be retained and purchased by the city. The city councils have appropriated $4,000 annually for their maintenance.

Foreign.

A Durango, Mex., dispatch says that the Prenonterio mine, 100 miles west of that city, has been sold by its owner, Maximillian Damm, to an English syndicate for $2,500,000 in gold.

The New Panama Canal Company, of Paris, "is said to have $10,000,000 available, and to intend to have an extensive series of borings made across the proposed route. A small preliminary canal fifty feet wide is to be made at the site of the divide cut, and seven American cableways have been purchased for this work."

The recent statement of the President of Mexico emphasizes the improvement taking place in the financial and commercial condition of that country. The revenue for the six months from July to December last exceeded the expenditure by more than $2,000,000. The message states that there is a decided improvement in the revenue returns, and that deficits are things of the past, and the announcement is also made of the successful accomplishment of the consolidation and unification of the public debt.

The St. Petersburg correspondent of the London *Times*, writing recently, remarks that great attention was being drawn to the unparalleled influx of foreign capital into Russia during the last two years, and which was still on the increase. There never has been, he observes, so much foreign enterprise in Russia as at the present moment, and one of the indications of it is the want of accommodation experienced in St. Petersburg and Moscow for several months past by foreign visitors and their Russian friends. All the hotels have been continually full, and it has been ascertained that the majority of newcomers are on business for foreign firms or syndicates.

The British consul at Vera Cruz contributes information which must prove pleasant to shareholders in the Mexican Railway. "As to the harbor improvements, he says that, when finished, Vera Cruz harbor will be perfectly safe in all weather, and will have accommodation for six of the largest steamers to discharge alongside into railroad cars at the same time, and this accomodation may be increased as required. In fact, Vera Cruz will be one of the finest ports in the world."

Last month's output from the Scottish shipbuilding yards reached 42,228 tons, activity being great on the Clyde after the suspension of operations. "The launches since the beginning of the year represent 140,112 tons, against 91,106 tons and 97,972 tons for the corresponding periods of 1895 and 1894. Indeed, the tonnage launched up to date is greater than in any year since 1890."

The German Reichstag has passed a resolution prohibiting dealings in the "term" market, which, it it becomes law, "will seriously interfere with business there, for a time at least." The effect so far is rather depressing than otherwise, according to Beerbohm's advices, which are contrary to the expectations of the opponents of "option" trading. Telegrams from Berlin, stating that there were cheaper offers of grain from Russia as a result of this vote, may, however, be regarded as highly improbable.

The importance of improving British means of communication with Canada is regarded such that "it would have been a public disaster had the home and Canadian governments been unable to agree on the conditions for a new fast steamship service. Happily, an agreement has been come to on all points, and the Dominion government is prepared to receive offers up to June 10 for a weekly service for ten years between some English port and Quebec in summer and Halifax in winter. The steamers are to be of at least 8,500 tons register, and the service is to be commenced on May 1, 1898. Tenderers must state the amount of annual subsidy for which they will undertake the contract."

The London *Statist* says that while British "trade is undoubtedly improving, the growth of business is not as rapid as it promised to be early in the year. That trade has not improved at a greater rate has been largely attributable to a falling off of purchases of English goods for the United States, where distrust has prevailed owing to traders having oversupplied themselves with goods, and to their consequent inability in many cases to meet maturing bills. The hard winter in Australia, followed by severe drouth, which necessitates Australia purchasing instead of exporting grain, and the consequent diminution in the purchasing power of Australia of European manufactures, has also had a retarding influence."

A powerful oil syndicate has been formed in London on the lines of the Standard Oil Company, with a capital of $5,000,000.

A French syndicate have purchased the Victor gold mine of Cripple Creek, Col.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Association—Name—Duration.

The Supreme Court of Minnesota held, in the recent case of Cornfield vs. Order Brith Abraham, that any association of persons transacting business by a common name may be sued by such name, and that where a fraternal or benevolent association issues a certificate of membership which by its terms is to continue in force so long as the member complies with the rules of the association, the presumption is that it continues until the contrary is made to appear, and if the membership has ceased the burden is on the association to prove it.

Title Insurance—Defense—Notice.

The Supreme Court of Minnesota held, in the recent case of Quigley et al. vs. St. Paul Title Insurance and Trust Company, which was an action by the insured against the insurer on a title insurance policy, that under the terms of the policy, when the insurer corporation undertook to defend the title or interest of the insured, it was bound to protect him through all stages of the proceedings against him (as well after the foreclosure sale as before the judgment in the proceeding), or else notify him that it would not, and furnish him all necessary information of the status of the proceeding in time to enable him to protect himself, and that when, after the giving of such a notice, the insurer defended the insured in the proceeding, the notice was thereby withdrawn.

Railroad—Bonds—Default—Sale.

A railroad decision of some interest has been rendered by Judge Townsend, in the United States District Court at New Haven, in the case of De Neufville vs. New York & Northern Railroad Company et al. The complainant, a minority stockholder of the New York Loan and Investment Company, alleged, among other things, that J. Pierpont Morgan, after a default of interest on the bonds of the New York & Northern road had been permitted, purchased the bonds and resold them to the New York Central, in order to prevent the reorganization of the New York & Northern as a rival to the Central. A demurrer to the complaint was sustained in the decision rendered by Judge Townsend.

Husband and Wife—Note—Surety.

The Supreme Court of Georgia held, in the recent case of Smith vs. Hardeman, that where a husband and wife executed a joint promissory note as a basis of credit for goods to be furnished the husband in conducting his business, "and for things for her family" to be furnished out of the payee's store, the wife's relation to the note, as to the goods to be supplied and which were supplied to the husband for carrying on his business, was that of surety only; and where, on the trial of an action brought on such note by the payee against both husband and wife, the above recited facts appeared, and it was also shown that the whole amount of the note had been "traded out" by the husband, and it did not appear that the wife had ever obtained any goods from the plaintiff on her own account, it was error to direct a verdict in his favor against both the defendants.

Corporation—Stock—Purchase—Option.

In the case of Vent et al. vs. Duluth Coffee and Spice Company, recently decided by the Supreme Court of Minnesota, it appeared that the plaintiff purchased from the defendant corporation a number of shares of its capital stock under an agreement which provided that at the end of a certain time he could at his option return the stock and receive back the purchase price. Plaintiff exercised the option, offered to return the stock, and demanded the purchase price. In an action to recover such price, the court held that the agreement was in the nature of a conditional sale, with an option to the purchaser to revoke or rescind, and that as between the plaintiff and defendant (the rights of creditors not being involved) the agreement by the defendant to receive back the stock and pay back the price thereof was not ultra vires.

Fraudulent Conveyance—Creditors—Lien.

The Kentucky Court of Appeals held, in the recent case of Fuquay et al. vs. Farmers' and Merchants' National Bank, that where a conveyance was set aside at the suit of attaching creditors of the grantor upon the ground that it was fraudulent as to creditors, the cancellation of the conveyance destroyed the lien of a creditor to whom the grantor had transferred the purchase money notes as collateral, leaving him in no better position than any other unsecured creditor; that the attaching creditors having had the land placed in the hands of a receiver in order that they might also subject the rents, they thereby acquired a lien upon the rents; that the creditor to whom the purchase money notes had been assigned as collateral did not acquire a lien upon the rents by suing out an attachment and having process of garnishment served upon the receiver, and that where it was stated in an affidavit for an attachment that the plaintiff "believes" he ought to recover a certain sum, followed by an affidavit of his attorney (the plaintiff himself being absent from the county) that he "believes" the statements in the affidavit are true, this was sufficient as to the sum to be recovered.

Insurance—Usage—Evidence.

The case of Brown vs. Franklin Mutual Fire Insurance Company, recently decided by the Supreme Court of Massachusetts, was brought to charge the defendant company with liability for damage to his stock of merchandise in Lynn by fire, upon an agreement made with T. F. Porter to reinsure. The policy had not been issued before the fire occurred. The court held there was sufficient evidence to warrant the jury in finding that Porter, if not the general agent of the company, was held out by the company as having authority to make such a contract, and that there was nothing in the insurance act of 1887 to prevent the making of such an insurance, nor was there anything in defendant's by-laws which showed that such a mode of insurance was invalid. This ruling was called forth by an exception taken by the defendant to the admission of evidence of a general custom and usage, to the effect that persons authorized by mutual fire insurance companies in Massachusetts to solicit insurance can bind the company until notice of the refusal of the risk by the company is received by the agent and communicated to the person desiring the insurance. The court held that the evidence was rightly admitted.

Promissory Note—Agency—Delivery.

The Supreme Court of Georgia held, in the recent case of Hansford vs. Freeman, that where a promissory note was signed and delivered by the maker to the payee's agent upon an express understanding that the latter was not to deliver the note to his principal except upon the happening of a certain event, but was to hold the note "for both parties" until it could be ascertained whether or not this event would happen, and where, in fact, it did not happen at all, and the agent, in violation of the understanding and agreement above mentioned, delivered the note to his principal, such delivery was not effective or binding upon the maker. Under these circumstances, the court said, the agent was, as to the matter of delivery, the mutual agent of both the other parties. The court further held that while mere ignorance of law will not, ordinarily, relieve a party from the performance of his written contract where he signs and delivers the same with full knowledge of all the facts, yet where, on account of misplaced confidence and because of artifice and deception fraudulently practiced upon him by the opposite party, a vital and material part of the contract was omitted from the writing, which purported to express the whole contract, and the party overreached was fraudulently led to believe that the contract as written was in effect the same as if the omitted portion had been inserted, equity would decree a reformation.

Railroad—Accident—Agent—Trespasser.

The Kentucky Court of Appeals held, in the recent case of Central Railroad Company vs. Mahan, that where a railroad station agent, who had received orders to stop an extra freight train at his station and have it side-tracked there so that a regular passenger train going in the same direction might pass it without stopping, displayed his light upon the approach of the extra, which, however, gave no signals in response, but rapidly passed the station, it became the duty of the station agent to use further effort to stop the train, and, therefore, in leaving the platform and going upon the track for that purpose, he did not become a trespasser; that although he was guilty of negligence in going upon the side track when there was space elsewhere within which to stand and give his signal to the approaching passenger train after he had succeeded in giving his orders to the conductor of the freight train, yet, as those in charge of the backing freight train might have discovered his danger and averted the injury by the exercise of ordinary care, the company was liable for the failure to do so; that it was the duty of those operating the extra freight train to have a brakeman on the rear of the backing train who might give warning of its comparatively noiseless approach, and that it was no excuse for the failure to make such provision to say that the company was using, instead of the usual caboose, a box car which did not conveniently admit of this customary precaution.

BUSINESS NOTES.

New Brunswick Shingles.

The *Northeastern Lumberman* says: "Manufacturers of cedar shingles in New Brunswick are pushing things, while the present free-trade American tariff permits the free entry of shingles from Canada. We learn that one concern is prepared to saw 250,000 shingles per day for the next twelve months, having secured the logs for that purpose. Ordinary estimates of the yield of a thousand of cedar logs is about 8,000 shingles, but we learn of one concern last year who averaged 9.2 thousands of shingles from each thousand feet of cedar logs. Of course, much depends upon the scale and the soundness of the cedar."

Smallest Republic in Europe.

The London *Westminster Gazette* says: "Neither Andorra nor San Marino can claim to be the smallest independent territory in Europe. That position belongs to Tavoralo, an islet off the northwest coast of Sardinia. Its size is three miles long and three-quarters of a mile broad, and its population numbers exactly fifty-five souls. From 1836 to 1882 the islet was governed by one Paoloto, who had all the authority of a king, but when he died, in the latter year, he advised the inhabitants to form a republic, which was done. All the adult islanders, women equally with men, have votes, and every six years a president is elected for that period."

An Universal Census.

The New York *Engineering News* says: "A universal census is proposed for the year 1900, and the proposition was discussed at the meeting of the International Statistical Institute at Berne. A committee is to be appointed by the institute, which is to advise as to the most convenient date for the census and to determine and formulate important questions of general interest, leaving each country to supplement these as they deem fit. The terms to be used in the census papers should also be accurately defined, so as to avoid ambiguity and to obtain identical results; and, most important of all, the committee is to offer suggestions as to the best means of obtaining united action in several countries. This committee is to report at the next meeting of the institute, in 1897."

American Meats in Europe.

William D. Wamer, United States consul at Cologne, writes to the State Department that the publication in Germany of information concerning the official inspection of live stock and their products by the United States government has had a good effect. Business in American meat products has recovered, and importers of these products are printing the information in their price lists. "In conversing with the importers here," says Mr. Wamer, "they expressed the belief it would be advisable for the American government to have a certain sum of money appropriated to be used in making just such publications whenever false reports have been spread regarding the unwholesomeness of American products. But as this is directly in the interest of the exporting merchants in the United States, it appears to me that they would willingly subscribe a sum of money to be placed in the hands of the Secretary of Agriculture for the purposes mentioned."

German Cement Trade.

In *Kuhlow's* (Berlin) we find the following: "There are some sixty-three cement works in the whole of Germany. The Rhine is the principal center for this manufacture, but in the neighborhood of Hamburg there are three or four in operation for the production of the article. The annual production of Germany amounts to nearly 11,000,000 barrels, giving employment to some 1,800 hands, whose annual earnings amount to some £698,780. The largest customers for this article in Europe are Russia and Norway, and of transatlantic countries, the United States, Brazil, Chili and Venezuela. The exportation to Great Britain and British possessions is comparatively small. The following table gives approximately the quantity and value exported to European and other countries:

Exports.	*Cwts.*		*Exports.*	*Cwts.*	
Norway	58,500	£6,700	Brazil	446,340	£40,200
Russia	34,353	2,900	Chili	131,000	13,000
United States	1,386,872	168,000	Venezuela	103,000	9,800

Business Conditions in Cuba.

The Philadelphia *Ledger* says: "Things must be pretty bad in Cuba for all concerned—the Spaniards, the insurgents and the non-combatants. The first are making no progress, the second are enduring many hardships and working under great disadvantages, but the last are the most distressed of all. They are not permitted to make sugar, and thus their principal source of revenue is cut off, while, though there seems to be no restriction upon their doing ordinary farming, there is little inducement for them to plant, since, if the Spaniards do not raid them in search of supplies, the insurgents are pretty certain to do so. Many of the plantations have been burned, the live stock carried off, and destitution prevails to the point of starvation. This is the situation in the country, while in the towns it is but little better, as trade is cut off and the people are living from hand to mouth. Yet, with all this, there seems to be no thought of surrender, and Weyler's silence as to the results of his proclamation of amnesty is significant of its failure."

Australian Wool Clips.

How important an addition to the gross income of Australasia a rise in the price of wool must be may be partly judged from a glance at the following table, which gives an estimate of the quantity and value of each Australasian clip for the last sixteen years:

	Bales.	*Value per bale.*	*Total value.*
1880–81	952,000	£17¾	£16,898,000
1881–82	997,000	18	17,946,000
1882–83	1,040,000	17¼	17,940,000
1883–84	1,111,000	16½	18,331,500
1884–85	1,104,000	14½	16,008,000
1885–86	1,155,000	14	16,170,000
1886–87	1,181,000	14½	17,124,500
1887–88	1,285,000	14	17,990,000
1888–89	1,395,000	16	22,320,000
1889–90	1,484,000	15¼	22,631,000
1890–91	1,628,000	14	22,792,000
1891–92	1,794,000	12½	22,425,000
1892–93	1,808,000	13	23,504,000
1893–94	1,504,000	12	22,848,000
1894–95	1,979,000	11½	22,758,500
1895–96	1,830,000	13	23,790,000

The figures for 1895–96 estimated. Allowance is made "for a decrease of 149,000 bales in quantity, and an increase of £1 10s. per bale in value."

Another Pittsburgh Railroad.

The *American Manufacturer* says: "In these days when so many railroads are built on paper alone, it is refreshing to note the beginning of a project which is to be put through. Such is the new Butler & Pittsburgh Railway which was organized a few days ago. Mr. Andrew Carnegie, chairman of the board of directors, has subscribed $2,500,000 of the $3,000,000 required to build this road. This line, although short, will be a very important one. Its entire length will be but forty miles. It will run from the Edgar Thomson Steel Works, at Braddock, to Butler, where it will connect with the Pittsburgh, Shenango & Lake Erie Railroad. Its route will be along the Allegheny river to Deer creek, and up the creek straight to Butler. This line will doubtless have quite an influence on the ore carrying trade, as it will furnish the Pittsburgh district another outlet to the lakes. Work on the new line is to be commenced at once, as the secretary of the company has been authorized to advertise for bids on construction. This road will further assist Pittsburgh in meeting that fast-growing tendency to move the iron industries toward the lake region."

Consumption of Iron Ore.

Stocks of iron ore on all Lake Erie docks on May 1 were 693,282 tons less than on the same date a year ago. This information, which has been obtained through direct reports to the *Marine Review* from all of the dock superintendents, will be welcomed by everybody connected with the ore and vessel interests of the lakes. "On May 1 the amount of ore on all Lake Erie docks, exclusive of cargoes received this season, was 1,949,698 gross tons, against 2,642,980 tons on May 1, 1895, and 2,588,370 tons on May 1, 1894. This aggregate is made up very largely of non-Bessemer ores, and it includes also, as in past years, a large amount of low-grade ore (some of it practically worthless) that has been accumulating for a great number of years past. It is also learned from this dock statement that 8,805,510 tons of ore was moved from Lake Erie ports to furnaces during the year ending May 1, 1895, and that this amount is 2,509,295 tons more than was ever moved from docks to furnaces in any previous year. At the close of navigation on December 1, 1895, the stocks on dock amounted to 4,415,712 tons. If we deduct from this 1,949,698 tons, the amount now on dock, we find that shipments to furnaces from Lake Erie ports during the past winter amounted to 2,466,014 tons, which, added to 6,339,496 tons, the amount shipped to furnaces during the season of navigation in 1895, gives 8,805,510 tons as the entire consumption of ore from Lake Erie docks during the year ending May 1, 1896. During the year ending May 1, 1895, the consumption from Lake Erie docks was 6,296,215 tons, so that the difference in favor of the year just past is 2,509,295 tons. These figures do not, of course, represent the entire consumption of Lake Superior ores during the year ending May 1, 1896. They cover only the ore brought to Lake Erie ports and have no reference to the heavy consumption at South Chicago, or to small quantities at other points on Lake Michigan and at Detroit."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

General trade throughout the country remains quiet, wholesale merchants continue conservative, and the distribution of general merchandise is almost of a hand-to-mouth character. South and southwest business remains dull and featureless—unchanged from last week. At larger eastern centers travelers are preparing to start out, but unfavorable features in recent weeks with respect to cotton and woolen and steel and iron industries show no change. Collections in most directions continue unsatisfactory.

Concessions have been made in prices of wool, and manufacturers of cotton goods complain that prices are below a parity with the cost of raw material. Tobacco is depressed by trade embarrassments, and quotations are weaker, except for Havana. Demand for iron and steel is disappointing, and quotations for Bessemer pig have been shaded further. Unseasonable weather has had an unfavorable influence on sales of clothing and other staples, while labor disturbances at some western cities have checked demand. Request for lumber is smaller than anticipated, and dry weather at the south has emphasized the dullness of last week.

Relatively the most favorable reports as to trade this week come from Illinois, Missouri, Kansas, Iowa and Nebraska. Jobbers supplying that region report demand for hardware, shoes, dry goods and notions more active, and that mercantile collections have improved. Recent rains have had a very favorable influence on crops in Kansas and Missouri. This has tended to make merchants regard the outlook more favorably and to stimulate purchases. Demand for lake tonnage and canal freights has stimulated trade, and New England boot and shoe factories report prices firmer, with the outlook favoring an advance. Agricultural and live stock interests in the Dakotas are reported in an excellent condition, although unfavorable weather in Oregon has checked trade at Portland. Business at Seattle is improved by better weather, and heavy shipments of merchandise have been sent to Central America. Tacoma telegraphs the Washington wheat crop promises to be the largest on record, and San Francisco that damage to the California grape crop by frost has resulted in higher prices for wine. In addition to a better feeling and stronger values for leather and hides, steel rail mills have sold two tons of product this year to one ton last year. The fact that fewer pig-iron furnaces are turning out as much, if not more, iron this month than last indicates that an unexpectedly large volume of contracts had been placed prior to the late nominal advance in quotations.

The New York stock market is dull, narrow, professional, and devoid of tangible features. The disposition is to wait for political developments in connection with the currency. The general steadiness of prices proceeds from the belief that the verdict will be favorable to a stable currency. Gold shipments continue to Germany, the exports for the week being $4,050,000. Foreign exchange is dull and heavy at 4.88½ for demand sterling on offerings of gold bills.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 1,827,000 bushels, against 1,882,000 bushels last week, 2,397,000 bushels in the corresponding week one year ago, 2,420,000 bushels two years ago, and as compared with 3,885,000 bushels in the like week in 1893.

April railroad earnings are, as a whole, fairly satisfactory. The gain shown in April this year over the like month last year is smaller than that in any preceding month since last summer, but follows a larger gain in April, 1895, over 1894. Total earnings of 126 roads, with 95,000 miles of track, aggregated $36,851,000 in April, a gain of 3.5 per cent. over April, 1895, which month, in turn, showed an increase of 4.5 per cent. over April, 1894. The granger roads still make the best showing, with the Pacific roads next. The only decreases are in the coal roads and in the southwesterns. Large increases are fewer than for some months past, the grangers monopolizing most of them. For four months this year gross earnings show an increase of 8 per cent. over 1895, following an increase in 1895 over 1894 of nearly 1 per cent.

The recent average weekly commercial death rate is continued, with a total of 265 business failures throughout the United States this week, against 267 last week, 210 in the week one year ago, 186 in the corresponding week of 1894, and as compared with 255 in the like week in May, 1893.

More important changes in quotations for staples include advances for nails, cotton and oats, and decreases for pig iron, wool, petroleum, flour, wheat and pork, with steel nominally unchanged or shaded, according to the character of the sale. The prolongation of this waiting season in business is further indicated by the moderate change in the volume of bank clearings compared with last week, the decrease being 1.4 per cent., the total for the past six business days throughout the United States being $1,019,000,000. Compared with the corresponding total in the second week of May, 1895, the decrease this week is more than 12 per cent., but as compared with the corresponding week in 1894 this week's aggregate shows an increase of 15 per cent. When contrasted with the like total in 1893, the falling off is nearly 17 per cent., and as compared with the corresponding week in 1892 it is a little more than 17 per cent.

Toronto dry goods jobbers report only fair sorting-up orders. In other lines general trade in the Province of Ontario is unchanged. Montreal merchants regard probable changes in the Dominion tariff as tending to restrict business. Jobbers state that collections are slow and orders light. At Quebec city, however, there is a somewhat larger trade. There is a moderate improvement in distribution of dry goods and hardware at Halifax, and an encouraging advance in the West India fish market. New Brunswick lumber interests suffer for want of rain, and Newfoundland ports are blockaded with ice. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax aggregate $20,628,000 this week, which is fractionally less than last week, and almost the same total as reported in the like week one year ago. The increase as compared with the corresponding total in 1894 is a little less than 5 per cent. There are 34 business failures reported throughout the Canadian Dominion this week. Last week the total was 38, and in the week one year ago it was 28.

FINANCIAL.

The Money Market.

The New York loan market is of the narrowest, as regards demands, and in some lines the supply of funds is a little less pressing. A disposition is noticed in connection with both time loans and mercantile paper to make arrangements running over the election and into the early winter. The impression that a higher and stronger market will prevail in the autumn is also general. Commercial paper is, on the whole, dull, the supply of acceptable names not being large, and double and indorsed bills receivable are quoted at 4@5 per cent. Time money is 3@3½ per cent. for 30 to 90 days, 3½@4 per cent. for 4 to 6 months, and 4½ for longer periods. Call money has been 2½@3 per cent.

Surplus reserve	1,907,857	1,607,571	Inc.	300,286

The New York Banks.

The New York bank statement for the week ending May 9 again displays the influences of money received by the banks from the country opposed to the withdrawal through gold shipments to Europe. The decrease in total reserve holdings of $2,698,000, therefore, represents, it may be presumed, the overplus of gold exports. The only other item in the statement of averages which calls for attention is the increase of over $3,000,000 in the average of loans, the surplus reserve decreasing over $2,700,000. The figures of the statement compare as follows with those of the preceding week:

	May 2, '96.	May 9, '96.	Changes.	
Loans	$470,663,500	$474,056,700	Inc.	$3,393,200
Specie	[illegible]	59,460,900	Inc.	136,900
Legal tenders	87,371,300	84,536,100	Dec.	2,835,200
Deposits	495,004,100	495,015,500	Inc.	11,400
Circulation	14,370,700	14,350,800	Dec.	19,900
Total reserve	146,695,300	143,997,000	Dec.	2,698,300
Reserve required	123,751,025	123,753,875	Inc.	2,850
Surplus reserve	22,944,275	20,243,125	Dec.	2,701,150

At the corresponding period last year the surplus reserve was $31,070,100, against $80,634,575 in 1894.

Silver.

The silver market has been slightly firmer this week, though there are no features of any consequence. Exports from this country continue on a fairly large scale by almost every steamer.

SILVER PRICES.

	May 9.	May 11.	May 12.	May 13.	May 14.	May 15.
London	31d.	31d.	30 15-16d.	31d.	31 1-16d.	31⅛d.
N. Y.	68c.	68c.	67½c.	68c.	68c.	⅛c.

Foreign Exchange.

The banking firms which seem to be able to secure a small premium for gold have continued to ship this week to the extent of their ability to sell bills. The shipments consisted of $2,050,000 sent out by the German steamer on Tuesday, $1,500,000 on Thursday, and $1,000,000 by to-day's boat, a total for the week of $4,550,000. While there are a few security bills on the market, offerings of commercial bills are small, and the gold shippers supply the inquiry which comes from a variety of sources, and, though dull at times, seems sufficient in volume to absorb the current offerings.

There is more or less discusssion of the causes of the present outflow of gold. Some attention is paid to the reports that the Russian Treasury is authorizing the payment of a small premium, but it is also suggested that the arrangement has a more natural basis, and represents the transfer to the continent of balances in its favor created by the liquidation of accounts in the London mining share market. The payment of the Chinese indemnity to the account of Japan complicates the financial situation to some extent, and has made a firmer money market in London. Some interest is taken in the placing by subscription at the latter city of the $4,000,000 of New York city 3½ per cent. bonds lately purchased by a local syndicate. It is understood that the exchange against this transaction had not been drawn.

Pressure of gold bills lowered the rate for demand sterling to 4.88½ on a commission higher early in the week, and the figure did not vary much from this. Long sterling was also weaker on the higher rate for discount in London, and the posted rate for that class was reduced ½c. on Thursday—to 4.88—making the nominal figure 4.88@4.89½. On Friday the market was dull and heavy on additional offerings on gold bills.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

May 9.	*May.* 11	*May* 12.	*May* 13.	*May* 14.	*May* 15.
4.88½ @ 4.89½	4.88½ @ 4.89½	4.88½ @ 4.89½	4.88½ @ 4.89½	4.88 @ 4.89½	4.88 @ 4.89¼

ACTUAL BUSINESS BANKERS' DEMAND STERLING.

4.88¾ @ 4.88¾	4.88½ @ 4.88¾	4.88½ @ 4.88¾	4.88½ @ 4.88¾	4.88½ @ 4.88¾	4.88½ @ 4.88¾

ACTUAL BUSINESS BANKERS' SIXTY-DAY STERLING.

4.87¾ @ 4.87¾	4.87½ @ 4.87¾	4.87½ @ 4.87¾	4.87½ @ 4.87½	4.87½ @ 4.87½	4.87¼ @ 4.87½

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.88¾ @4.89; commercial bills, 4.86¾ @4.87; francs, 5.16¼ @ 5.15; reichsmarks, 95¼ @95⅝.

The Bank of England discount rate remains 2 per cent. The bank this week lost £57,000 in specie, and its proportion of reserve is 59.08 per cent., against 59 per cent. last week. The lockup of money in London, caused by the Japanese indemnity payment, has affected open market quotations, call money being ½@¾ per cent. and discount ⅛@1 per cent. The fortnightly settlement at the London Stock Exchange disclosed only a small account open in speculative lines, and was arranged with the greatest ease.

Imports and exports of the United States for the month and ten months ending April, 1895 and 1896 (preliminary figures for 1896, corrected to May 14, 1896):

April. MERCHANDISE.	1895.	1896.

The exports (exclusive of specie) from New York to foreign ports for the week ending May 12 were $780,360 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1806.	1895.
For the week	$6,265,079	$4,612,432
Previously reported	135,694,008	125,456,675
Since January 1	$141,959,087	$130,069,107

The following table shows the imports (exclusive of specie) at the port of New York for the week ending May 8, 1896:

	1896.	1805.
Dry goods	$1,744,529	$2,130,985
General merchandise	8,000,487	6,925,183
Totals for the week	$9,745,016	$9,056,168
Previously reported	178,189,070	184,327,291
Since January 1	$187,934,086	$193,383,459

THE STOCK MARKETS.

The New York Stock Market.

Speculative activity has almost ceased. Trading in stocks has been confined to the four walls of the board room, and involves only the smaller class of professional operators. The fluctuations have consequently been unimportant, and exhibit no decided tendency or features of special interest. The disposition on all sides is to wait for developments in connection with the canvass for the presidency and the bearings of the political platforms on the currency question. There has, however, been a noteworthy subsidence of the apprehension which found expression in financial circles last week with respect to the outcome at the St. Louis convention. Similarly, the somewhat exaggerated fears of a possible rupture with Spain over the condemnation of some American prisoners in Cuba died out after producing a slight bearish impression, and so far as the market can be said to have displayed any tendency during the latter part of the week, it was, on the whole, to improve slightly, mainly on the covering of short contracts. The continued shipment of gold to Germany on "special orders," of course, attracts attention. The total taken from the Treasury and sent out this week was $4,050,000. The movement, while calculated to check stock market activity, does not, however, seem to have any distinct effect on the market, and is offset to a certain extent by the symptoms that London continues to exhibit of taking a more active interest in the American market, provided it is satisfied that the coming election will result in the supremacy of sound money ideas in the government. A factor of some importance has been the crop situation. The government crop report for May 1 was more favorable than had been expected, and the fact that there have been beneficial rains in sections where they were needed has also tended to create further bullish sentiment under this head.

Boston Stock Market.

The market has ruled more quiet, but values assume a firmer tone at the close. Atchison closes ⅜ higher, with Chicago, Burlington & Quincy ¾ advanced under quiet trading, while West End Railroad closes ⅞ above last week. Coppers have shown a stronger tone, Boston & Montana closing 3⅝ above last week, with Calumet & Hecla 2½ higher. Sugar has been fairly active and closes 1½ up, with Bay State Gas quite active and ½ higher at the close.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending			
	Price May 14, 1896.	*Price May* 7, 1896.	*Sales May* 14, 1896.	*Sales May* 7, 1896.

General Mention.

An announcement is issued by the committee of the bondholders of the James River Valley Railroad Company, James Timpson, chairman, stating that said committee have negotiated a settlement with the Northern Pacific reorganization managers, pursuant to which bonds of the James River Valley Railroad Company and the holders of United States Mortgage and Trust Company receipts therefor may participate in said reorganization, receiving for each $1,000 present bond with all unpaid coupons attached, $500 in the new 3 per cent. general lien bonds, bearing interest from January 1, 1897, and $500 in the new preferred stock trust certificates of the reorganized Northern Pacific Railroad Company. Holders of receipts of the United States Mortgage and Trust Company for first mortgage bonds of the James River Valley Railroad Company, and of such bonds not heretofore deposited with said company, who desire to participate in this arrangement, are required to deposit their receipts or bonds with J. P. Morgan & Co. not later than May 26, for which they will receive suitable reorganization certificates. The committee further states that the holders of receipts representing more than two-thirds in par value of the said mortgage bonds have already approved the settlement made. The committee advise prompt acceptance of the proposition, and inform holders that receipts or bonds not deposited may, at the discretion of the reorganization managers of the Northern Pacific Railroad Company, be excluded from the benefits of the settlement.

TRADE QUIET.

GREATEST ACTIVITY SHOWN BY JOBBERS IN MISSOURI, KANSAS, NEBRASKA AND IOWA.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, May 15.—The tone of trade continues quiet in most all departments of the merchandise market, with general business conservatively conducted. The demand for supplies of all kinds is small, and buyers will only operate in a hand-to-mouth way. The money market shows a generally easier tone. The supply is not large, but it appears to be in excess of the demand on the present waiting market. Time money, 4 to 6 months, is easily obtained at 4 per cent. on acceptable collateral, with business paper at 4½@5 per cent., and the supply of paper moderate. The boot and shoe market is firmer, and the feeling is that prices have reached the bottom. Jobbers are more confident, and will order readily where they need supplies. Leather is quiet, but the tone is firmer, with an advance asked for some kinds. Hides are dull, but offerings are small and the market nominally firmer. Iron and steel are quiet but steady. Lumber is in quiet demand but steady, with coal in quiet demand.

Philadelphia, May 15.—Business conditions, so far as textile manufacturers are concerned, are unfavorable, while prices of raw material in some instances have been very low. Selling prices of manufactured goods have been correspondingly low. This requires a large output to insure a fair profit, and demand has not been heavy enough to enable the general trade to make money. These conditions also prevail to some extent in the clothing line, which has also felt the result of unseasonable weather. Manufacturers of dress goods seem to be doing better than others. There is not much activity in dry goods. In glass bottles and jars there has been a decided advance, with increased sales, demand coming principally from New York city. The failure of some large dealers in tobacco in New York city has had a depressing effect here, and some who have been holding stock for advances are endeavoring to dispose of it through brokers. Prices are very low, except for Havana. The activity hoped for in iron has not been developed; the market dull and prices are low.

Pittsburgh, May 15.—No particular change is noted in general business here. Jobbing houses generally appear busy, and prices are well maintained. Some complaints are heard as to collections, but otherwise business is satisfactory. The local iron market has been very dull. Few sales are reported, but prices are maintained. The trade generally looks for some improvement within the next month.

Buffalo, May. 15.—The demand for lake tonnage at profitable rates and the opening of the canal at correspondingly good rates has tended to create a better feeling, and this is manifested by some increase in activity in general trade. Bicycle manufacturers are very busy, and other iron industries of similar nature claim to be running with more orders and at better prices. Nothing is doing in the anthracite coal trade, and no effort is being made to make sales. Jobbers in dry goods report that their traveling men are doing fairly well. But little improvement is noted in lumber. Produce is moving slowly.

Baltimore, May 15.—There has been a good business done by the millinery houses, and the season about ending will be a satisfactory one, with continued good collections. Clothing salesmen are preparing for their trips, and but little is being done in the way of sales. Boot and shoe jobbers report trade but fair, while dry goods men report business as good, though mostly confined to immediate wants. Collections satisfactory.

West and Northwest.

Cleveland, May 15.—In leading or staple merchandise lines jobbing trade moves in a fairly satisfactory volume, while in those more general it is quiet and unchanged. Iron and steel markets are without special new features for the week. Mercantile collections continue slow.

Cincinnati, May 15.—Business is unchanged.

Detroit, May 15.—During the past week the movement of general merchandise has shown a falling off, trade being classed as only fair for the season. Manufacturers are moderately busy. In building lines trade is dull. Carpenters are on a strike for fewer hours and increased wages. Collections continue only fairly satisfactory.

Chicago, May 15.—Trade in all leading lines has held its own during the week, and there are no new features to note in dry goods, clothing or shoes. Tanners say that there is a better feeling in leather, but sales are not large. The calls for light hardware are liberal, and the previous fair demand continues for seasonable line goods, and prices are well maintained. Bicycle sales are large, and some manufacturers are behind in their orders. Calls for steel are not increasing, but the situation remains strong, and the rail mills have sold two tons this year to one last. Pig iron remains steady, with sales confined to filling small orders. The lumber trade is disappointing, and sales are behind last year's. Produce sales are moderate, and prices generally lower. Wool receipts, 1,659,859 pounds. The demand for loans is good, and deposits of the national banks have increased over $12,000,000 since the last of February. Loans have also been enlarged. Collections are fair.

Louisville, May 15.—Jobbers in dry goods, hardware and drugs are doing a fair business, while other lines are quiet. The dry weather has affected the condition of tobacco, and sales have been restricted at moderately good prices. Collections are reasonably good.

St. Louis, May 15.—There is a slightly better feeling among a majority of manufacturers and jobbers, caused principally by additional favorable crop reports. Summer goods are ordered in reasonable sized lots, and business for fall delivery is increasing. The demand for leather is not mate-

rially better, but tanners are not granting concessions, and in some cheaper grades values are stiffening. A noticeable change for the better has taken place in the hide market. Higher prices are asked and transactions are somewhat larger. The new quotation on nails is responsible for a slight falling off in demand, but there is no likelihood of lower prices. New orders for pig iron continue light. Shipments from the furnaces are still large, which shows considerable consumption.

Kansas City, May 15.—Dry goods, boot and shoe and hardware jobbing houses report large orders during the past week, with good collections. Retail dealers in all lines report sales away above the average, with bright prospects for the future, caused by general rains throughout Kansas and Missouri for the past forty-eight hours.

Milwaukee, May 15.—The strike of the street railway employees has had a depressing effect upon trade in general. Collections are slow.

Minneapolis, May 15.—Trade in most lines is quiet, induced by the unseasonable weather.

Omaha, May 15.—The local trade reports a slight increase in demand, especially for boots and shoes and dry goods. The recent extreme moisture throughout the state has created a more hopeful feeling.

Sioux Falls, May 15.—Wholesale trade is steady, with very fair collections. Retail trade is fair. Agricultural and stock interests are in first-class condition.

Southern Cities.

Charleston, May 15.—Continued dry and oppressive weather has a depressing influence on trade. Wholesalers and jobbers report a fair volume of trade, with collections as usual in most lines. Retail trade in summer goods is improving.

Savannah, May 15.—Trade and collections are fair. There is increase in receipts of rosin and spirits. Shipments are about same; good demand for both.

Atlanta, May 15.—Trade continues quiet and collections only fair.

Augusta, May 15.—All lines of business are practically unchanged. Collections are fair.

Jacksonville, May 15.—No change is noted from last week.

Birmingham, May 15.—Trade is quiet. Collections slow.

Chattanooga, May 15.—Business with jobbers is quiet. Dry weather is cutting off the truck farmers' crops, but much money has been brought in.

Nashville, May 15.—Hardware, shoes, dry goods and notions are more active this week. Groceries are rather quiet. Collections are favorable for the season.

Memphis, May 15.—Business is fair, especially in hardware and plantation supplies.

New Orleans, May 15.—General trade shows a slight improvement, but the volume of orders continues small. There is a moderate movement in cotton. Sugar is quiet but steady. There is a limited demand for rice.

Galveston, May 15.—Trade in all lines is dull and featureless.

Pacific Coast.

San Francisco, May 15.—There are no new features in commercial lines. Freights are steady, with an upward tendency. Prices of wines have advanced, owing to damage by frosts to grapes. Produce market continues dull. Collections are slow.

Portland, May 15.—Boots and shoes, millinery, clothing and drug trades continue depressed. Bad weather has impaired the volume of business in all lines. The lumber business is not so active as it has been. Collections are fair.

Tacoma, May 15.—There are no new features in merchandise lines. The state grain inspector reports prospects for the largest wheat yield ever produced in the state.

Seattle, May 15.—Improved weather has favorably affected trade. Steamer Transit left for Central American ports with a $50,000 cargo. Receipts of sealskins amount to 228. Building of government vessels is being pushed rapidly, eight additional carloads of steel plates having arrived.

Canada.

Toronto, May 15.—General wholesale trade is without feature. Dry goods dealers report fair sorting-up orders, while hardware, metals and groceries are on the quiet side. Prices generally are unchanged.

Montreal, May 15.—General conditions of trade are unaltered. Retailers report a fair volume of business, but uncertainty exists as to possible tariff changes. Fine weather has stimulated city trade, while farmers have been busy seeding. Reports from the interior show collections slow and orders light. Quebec City and district reports business somewhat improved but still dull.

Halifax, May 15.—General business is quiet, with some slight improvement in dry goods and hardware. There has been a slight advance in prices in the West India fish market, which is more encouraging to shippers. Collections are complained of. New Brunswick reports the season backward and the lumber interests suffering for want of rain. Newfoundland ports are blockaded with ice. There is considerable immigration from the colony this spring.

Dry Goods.

Trade has ruled quiet in all departments of the market the past week, with operations moderately conducted. The east wind has been a factor in the retail movement, which has counteracted to a great extent the benefits of the few warm days. Cotton fabrics are yet selling low compared with the cost, and the market is still depressed through oversupplies. Some mills have sold quite freely of brown goods of late, and at low prices. Printed fabrics are moving slow, outside of some fancy specialties that manage to keep well sold up. Ginghams are quiet. Dress woolens are slow of sale, and while the mills are fairly engaged on fall orders, new business comes hard. Men's-wear woolens are dull and the market is yet much depressed, with a large amount of machinery idle.

Wool.

The market continues very dull and prices are still shrinking. The wants of manufacturers are small, and to attempt to force sales means that the holder is obliged to make concessions. Fleece wools have met with more demand at lower prices, last sales being at 17@18c. for XX and XX and above washed Ohio, with other kinds in proportion. More quarter-bloods unwashed have been sold, a line of clothing being cleaned up at 13½@14c., while 14½@15c. will cover the best combings outside of some choice Kentucky lots. Territory wools are dull, with 30c., scoured, about an outside to quote any fine lots, while medium is quoted at 27@28c. Old wools are in large supply, with some of the new clip coming in. Australian wools are held steady and at concessions; considerable sales could yet be made. The London sales are steady, and will close May 16.

Cotton.

The exports of raw cotton during April and the eight months ending April 30, 1896, with comparisons for similar periods in 1895, were as follows:

APRIL.

	Bales.	*Pounds.*	*Values.*
1896	361,349	181,070,627	$14,266,564
1895	531,357	266,630,031	16,034,616

EIGHT MONTHS ENDING APRIL 30.

1896	4,249,089	2,129,581,616	$174,400,723
1895	6,311,593	3,190,995,704	182,913,899

Petroleum.

Exports of mineral oils and its products during April and the ten months ending April 30, 1896 and 1895, were as follows:

THE BICYCLE INDUSTRY.

The New York *Herald* says: "In the city of New York alone there are nearly 200,000 bicycle riders, of whom 80,000 are members of various clubs," and the League of American Wheelmen "has 40,000 members in all parts of the United States, and there are nearly 4,000,000 riders in all throughout the country.

"This is only by way of a beginning to the figures. To supply all these wheels there are in this country, at the very least, 250 manufacturers, without counting the almost innumerable small makers, who build machines from parts purchased separately, or construct wheels with much pains and ingenuity under the most adverse conditions and in very small quantities. It has been estimated that the output of all these makers will, during the present season, amount in the aggregate to 1,000,000 machines. Exact figures it is not possible to obtain, of course, but the following are not very far out. Ahead of all others in point of production is a western firm, which this year will turn out between 60,000 and 70,000 machines, after eighteen different models. Another company, which probably comes next in order of immense production, will produce between 40,000 and 50,000 machines. A third firm expects to reach fully 35,000, in different models, while still another is preparing to place 25,000 or 30,000 machines on the market this year, and for a certain period, to fulfill their engagements, will turn out 200 machines every day. Another concern will produce about 25,000 in the same period, another follows with 20,000, one more with 20,000 more, and the eighth firm with 20,000. This brings the aggregate estimated output of these eight companies to the extraordinary sum of 250,000 or more. Grant that among the rest of the factories there is a production of 500,000 machines, and this will give 750,000 new bicycles to add to the existing large number.

"Another remarkable revolution has occurred. Whereas a few years ago a great many bicycles were imported from England, and even from France and Germany, to-day at least one of the English manufacturing companies has announced its intention of abandoning the American field, and doubtless others will follow. More than this, and infinitely more important, American bicycles have been proved to be so immeasurably superior, in weight, perfection of mechanism and general excellence, to the English, French or German article, that they are being exported in large quantities to those countries, where they have a large sale, and are not only better but cheaper than the home-made machine.

"As a result, or, better, a synchronous consequence, of this noteworthy condition of affairs, an immense new industry has been created in this country, which gives employment to hundreds of thousands of hands, mostly skilled artisans, in all parts of the country. Leaving out of the question the thousands of men who make quite a comfortable living by repairing injured machines, and selling supplies of pocket tools, of fittable parts and general bicycle sundries and requirements—for their name is legion and there is absolutely no means of computing them—we may form an estimate, as before, by taking a look at the numbers employed by a few large firms.

"One of the firms quoted as about to produce 25,000 machines this season employs 1,400 men the whole year round. Another, expecting to produce about 60,000 machines, gives employment to 2,700 men all the year. Now, taking these as a fair basis on which to form an estimate, supposing it takes 1,400 men to produce 25,000 bicycles, how many will be needed to produce 1,000,000 machines? By this rough method of computation it will take 56,000 men. But the total is nearer 70,000, because some firms make more parts of the completed bicycle than others. Some are entirely dependent for all their screw work upon some larger firm, created specially for that kind of production.

"Not all the bicycle manufacturing firms make their own tires, tubing or pedals, for instance, and special parts, such as lamps, cyclometers and saddles, are almost invariably made by firms which make these articles their specialty. It is estimated that in the manufacture of these sundries alone some 50,000 persons are employed all the year around.

"A very slight idea of the number of bicycle riders this country can boast of may be formed from the number of cyclometers sold during last year by one firm alone. The sales reached the fabulous total of 263,427—and yet the cyclometer is one of the luxuries, not one of the necessities, of the bicyclist. A pneumatic tire, which was one of the first of the new order that wiped out of existence the old 'bone shaker' and the six-foot driving wheel, was the precursor of about 1,500 models existing at this day, a fact in itself well worthy of serious consideration.

"Only the very roughest estimate can be formed of the enormous amount of capital invested in the bicycle industry. It is far easier to compute the amount spent by the people in buying and maintaining them. As a guide to the former estimate, it is best to take a few examples of the capital invested in some large concerns, and by making a comparative statement arrive at something like approximate figures. Some of the larger companies have capital invested in the manufacture of bicycles alone aggregating $6,000,000; yet, as has been shown, these firms are but a tithe of the whole, and the industry is growing larger and more widespread every day. 'Judging from the capital invested in our own concern,' said the manager of one of these firms, 'I should say that $30,000,000 to $40,000,000 would be a conservative computation of the amount of capital invested in the bicycle industry in this country. And this is for the manufacture of bicycles alone. I do not include those necessary accessories—saddles, lamps, bells, chains, tubing and odd parts. The manufacture of these articles has necessitated the building of specially constructed plants attached to existing factories, and, of course, the employment of many hundreds of additional hands. In these reinforcements, I do not think I am overestimating when I say that another $10,000,000 or $15,000,000 has been invested in the last three or four years, and with perfectly satisfactory results. There is, however, a peculiar and altogether unlooked-for change in process. When the industry started upon its truly remarkable course bicycle makers were unprovided with machinery and tools for the manufacture of certain parts of the wheel, such, for instance, as those made with screw machinery. This was almost entirely done by one firm, whose business, in consequence, increased enormously. Necessity is the mother of invention, you know, and, as it soon became evident that these parts could be made more cheaply than they could be bought, there very quickly arose bright engineering geniuses in nearly every establishment who set themselves to the inventien of new and improved machinery with which to make them on the parent premises.' 'I do not fear contradiction,' said the manager of one of the largest athletic sundries concerns in the country to me, 'when I declare my belief that there is not a trade in the United States that has not been beneficially affected by the bicycle industry. Why, even the butchers are benefited by the improved health and healthier appetites of the people. But that is entirely by the way. Members of every trade have found it to their advantage to invest some money in one of the many necessary adjuncts to the bicycle pastime. The leather goods people have found it necessary to invest in a special class of goods favorable to the manufacture of saddles, bags, valises and such like sundries. The shoemakers now make specially designed shoes, leggings, etc. The glove makers are affected. Watchmakers manufacture and keep on sale cyclometers and such like instruments of precision. Photographic apparatus makers turn out specially designed cameras. Wood-workers and cane-workers and cork-cutters, engravers, locksmiths and newspapers all have found it positively necessary to invest more or less capital in various branches of the bicycle industry. The total capital thus invested, entirely outside of the actual manufacture of bicycles, cannot be far short of $20,000,000 or $30,000,000. The investment is spread over an enormous area.'

"Prices of wheels vary from $50 to $100 and upward; $75 may therefore be pretty safely accepted as an average first cost to the owner of a bicycle. Put down another $5 for such adjuncts as lamp, bell, cyclometer, and a few useful, handy tools. There is possibly a suit of bicycling clothes, which may be estimated at $20, and then for the simple repairs that may be needed while on a long trip and away from the regular repair shops of the maker. These are not likely to exceed $5 in a year. The guaranty given with all bicycles covers all ordinary repairs not the result of carelessness or accident caused by the owner. Together, these sums, which include first cost, amount to $105. Now, by the end of the season a rider may have tired of his 'bike' or seen one he likes better, and wishes to make an exchange. His old machine and $30 to $50 will procure him a brand new one of the latest model. Hence, we may take it that the annual expense of keeping a bicycle, inclusive of first cost, is about $50, or, say, $1 per week. This, of course, does not include refreshments on journeys, hotel and other incidental expenses.

"Elsewhere it has been shown that in New York city alone there are nearly 200,000 bicyclists. These figures show $200,000 spent weekly by these enthusiasts, or $10,000,000 spent annually. To continue the sum, it is also estimated that in the United States there are not far short of and possibly more than 4,000,000 bicycles in use. At the same rate of computation these cost their owners $4,000,000 a week, or $200,000,000 a year.

"The economics of bicycling would not be complete in the least degree (they cannot be exhausted) without some slight estimate were made of the money saved by this apparently enormous expenditure. Take the railroad and car fares and other incidental expenses the ordinary pedestrian is put to in his daily walks through life. Put ordinary car fare down at 20c. a day, and that is very conservative. The bicyclist saves 20c. every week on that, to say nothing of his little Sunday jaunt into the city or out into the country. That may cost him anywhere from 50c. to $1. Take the lower sum, his bicycle saves him 50c. There can be no question of the health-giving properties of fresh air and exercise, so let us say for argument, $52 a year is saved from doctor and medicine. That is another dollar a week. But this may be extended to almost any degree. Already we have made him save $88.40 in a year. Four million bicyclists throughout the country, at the same rate, $353,600,000 saved in a year.

"It is not a very remarkable matter that the wheelmen of the United States should wish for better roads, but it is remarkable that they should have been able to influence the legislative bodies of nearly every state to such an extent that everywhere there is a movement for the appropriation of state moneys to be devoted to the improvement and betterment of roads.

"Good roads are a positive necessity to the bicyclist. This may be laid down as the first axiom in the book of the wheelmen. Mr. Isaac B. Potter may be quoted on this point.

"'The cycle path is a protest against bad roads, not a desire of the wheelmen. Give them good roads and they would not ask for a path. France has 130,000 miles of splendid roads. I have ridden all over that country, and there is no cycle path. It costs France $18,000,000 a year to keep those roads in good repair. The assessed valuation of personal real estate in the state of New York is $5,000,000,000, yet there is no state appropriation for the maintenance and making of roads.'

"A state appropriation of from $1,000,000 to $2,000,000 a year would be an insignificant tax in the state of New York, but it would be of direct benefit to roads already constructed, and would act as an object lesson to the farmers, teaching them how to make and improve branch roads.

"The highway commission of the state of Massachusetts is composed of three members of the League of American Wheelmen. That state has an appropriation of $800,000 a year for the improvement and repair of its roads. New Jersey has appropriations of $7,000,000 from state and county, and during the last two years has constructed and improved more than one thousand miles of roads. In Kentucky and North Carolina the work of constructing roads is most active. In the latter state convict labor has proved highly successful, and in Mechlenburg county a large number of roads have been built at a cost of $2,500 a mile, which is less than half the cost had it been done by contract.

"Illinois is hampered by a provision of the constitution against state appropriations for local purposes, but in Ohio, Indiana and Wisconsin and in Rhode Island the work is going on briskly and with marked success. In Vermont, mainly owing to the interest and influence of former Governor Levi K. Fuller, the roads are undergoing a process of improvement which is remarkable. Mr. Fuller is a member of the League of American Wheelmen.

"Another result of the increasing number of bicyclists is that many new roadhouses have come into existence, and the old ones, which had fallen into disuse or disrepute, have been renovated or rebuilt, in order to keep up with the times and regain the business they had lost."

AUTHORSHIP FOR PROFIT.

Charles Dudley Warner in *Harper's* writes entertainingly as follows: "It would be threshing over well-beaten straw to talk about the pay of the writing tribe. It is the public that makes the market price and the publishers are obliged to conform to it. The pay for all literary work is much higher than it was twenty years ago, and the very successful author gets as much as the keen insurance solicitor, and now and then he makes a 'fluke' which puts him abreast of the stock broker. The public is willing to pay for what it likes at the moment. The soprano and the tenor voices command a higher price than the contralto and the basso, as a rule. I hear that the favorite of the music halls, whose chief talent is not in music, but in innuendo, is paid twice the salary of the best actress in tragedy or comedy. The commercial value of any sort of writing rests upon the demand for it. To be in vogue with the public means temporarily a good income; to be out of vogue may mean starvation. The only remedy for this inequality of condition would be, according to our modern fashion, to establish a literary trades union, in which all the members should receive the same wages, whatever the quality of their work. Perhaps this may come about when entire communism is established, and the state owns everything and metes out the same support to the just and the unjust, to the dunce and the genius. Then there will be no rich authors, no poor authors, and perhaps it is superfluous to say, no good authors.

"Nor is it profitable to speculate upon the effect upon the quality of literature by the introduction of the strong commercial spirit. It may be admitted that the temptation to produce much copy is too strong to be resisted by the author who is for the hour popular. But if he goes on mining silver when he ought to coin gold only, he will not in the end drive the gold from circulation, but he will so reduce the value of his silver that its purchasing power will constantly decline. A clever man who has the trick of 'dictating' can produce copy much faster by the typewriter than by the pen. It is evident that some successful writers of fiction have already resorted to this source of wealth. I am not making a downright accusation of this practice, but the wordy and diffused, not to say sloppy, character of much of our fiction points to this kind of manufacture. The typewriter is a blessing to business men. It is death to the charm of all private correspondence, and its extensive use in original composition would inevitably dilute literature beyond the selling point. For the public keeps in mind Byron's emphatic remark that 'easy writing is —— hard reading.'

"There is, however, a point in regard to the lives of authors that one may reasonably consider. Within this century not a few authors have brought themselves into most distressing conditions, have put themselves under the harrow, as it were, by an ambition to live as only the very rich can afford to live. With a little, or sometimes a considerable success, they have launched out upon an expensive scale of living, built fine houses, set up glittering establishments, planned country places ambitiously, and ever after struggled to maintain themselves in failing health and broken spirits. In a less degree other writers have been bitten with a desire to shine in a society the passport to which is money, and to live in the luxury of the rich who have inherited wealth or made it by fortunate speculations. It seems to them that the gains of literature ought to enable them to have as much of the goods of this world as falls to the lot of other occupations. I am not saying that they should not. But, as a fact, this conception leads to an ignoble struggle, in which the dignity of literature is lost and peace of mind is sacrificed. Why should the young aspirant for immortality, or the scholar who enjoys the intellectual riches of the world, care for vulgar display, or seek to rival those whose only enjoyment is in material things? Why should he degrade his high calling by yielding to the commercial spirit? Why can not he stand upon the dignity of letters, without entering into a rivalry for luxury, which is certain to impair his capacity for the highest work? I do not think any literary workers are overpaid; many of them are shamefully underpaid, considering the service they do the world; but I am sure all of them would have greater peace of mind, enjoy quite as much reputation, and more surely uphold the dignity of their profession, if they were content to live in simplicity within their reasonable earnings, and not embitter their lives in a vain rivalry with the children of Mammon."

FINANCIAL.

NEW YORK, May 15, 1896.

TO THE BONDHOLDERS OF THE

JAMES RIVER VALLEY RAILROAD CO.

AND THE HOLDERS OF

United States Mortgage & Trust Company Receipts Therefor.

The undersigned Committee have negotiated a settlement with the Northern Pacific Reorganization managers, to the effect that, pursuant to the provisions of page 14 of the Plan of Reorganization of the Northern Pacific Railroad System, the Bonds of the James River Valley Railroad Company may participate in such reorganization, receiving for each $1,000 present Bond, with all unpaid coupons attached:

$500 in the new Three Per Cent. General Lien Bonds, bearing interest from January 1st, 1897; and

$500 in the new Preferred Stock Trust Certificates of the reorganized Northern Pacific Railroad Company.

Holders of Receipts of The United States Mortgage & Trust Company for First Mortgage Bonds of the James River Valley Railroad Company, and of such Bonds not heretofore deposited with said Mortgage & Trust Company, in order to participate in this arrangement, are hereby required and notified to deposit their Receipts or Bonds with Messrs. J. P. Morgan & Company, New York, not later than May 26th.

Suitable Reorganization Certificates will be issued upon such deposit in exchange for such Mortgage & Trust Company Receipts or Bonds, without expense to the depositor.

The holders of Receipts representing more than two-thirds in par value of the said Mortgage Bonds deposited with said Trust Company have already approved the settlement made by the Committee.

Receipts or Bonds not so deposited may, at the discretion of the Reorganization Managers, be excluded from the benefits of the settlement.

The Committee advise prompt acceptance of the foregoing proposition, and deposit of Receipts and Bonds, as above stated.

JAMES TIMPSON, Chairman.
WILLIAM M. COLE,
WILLIAM A. WHEELOCK,
Committee.

TO THE HOLDERS OF

Reorganization Certificates or Receipts for Preferred and Common Stock

OF THE

NORTHERN PACIFIC RAILROAD CO.,

Deposited under the Plan and Agreement of March 16, 1896.

NEW YORK, PHILADELPHIA, AND BERLIN,
May 5, 1896.

Pursuant to the provisions of said Plan and Agreement, notice is hereby given that an instalment of

$3.00 per share in respect of Preferred Stock, and
$5.00 per share in respect of Common Stock,

on account of the cash payments specified in the Plan, is hereby called for, and is payable at either of our offices on May 26, 1896, and all holders of such certificates or receipts are notified to make such payment on or before that date. Their reorganization certificates, or receipts, must be presented so that such payment may be endorsed thereon.

TO THE HOLDERS OF

PHILADELPHIA AND READING RAILROAD COMPANY'S

General Mortgage Bonds, First, Second, and Third Preference Income Bonds, Deferred Income Bonds, Stock, } and of receipts of Central Trust Company of New York therefor

NEW YORK, PHILADELPHIA, AND LONDON.
May 6th, 1896.

A decree of foreclosure and sale of the property of the Philadelphia and Reading Railroad Company and Philadelphia and Reading Coal and Iron Company having been entered, all holders of securities of the above issues not heretofore deposited under the plan and agreement of reorganization, dated December 14, 1895, are hereby notified that they may still deposit same with us, at either of our offices, as provided in said plan and agreement, up to May 21, 1896.

The first instalment, viz.:

$50.00 per $1,000 bond on First, Second, and Third Preference Income Bonds;
$2.50 per share on Stock;
$10.00 per $1,000 bond on Deferred Income Bonds, being one-quarter of the entire assessment on such Income Bonds and Stock, must be paid at the time of deposit, with interest at 6 per cent. from January 10, 1896. After May 21 a penalty of
$20.00 per $1,000 First, Second, or Third Preference Income Bond;
$1.00 per share of Stock;
50c. per $1,000 Deferred Income Bond,
will be exacted.

BALTIMORE & OHIO RAILROAD CO.

5% Bonds of 1925.
(LOAN OF 1885.)

In consequence of the appointment of Receivers of the Baltimore and Ohio Railroad Company, and with a view to the protection of the interests of the holders of the above mentioned Bonds, we invite holders of such Bonds to deposit the same, with all Coupons attached, at our office, on or before June 1, 1896, subject to an agreement dated April 10, 1896, between Speyer & Co. of New York, Speyer Brothers of London, and the depositing Bondholders. Copies of such Agreement may be obtained on application at our office.

We will buy, on the terms of the Agreement, the Coupons and interest instalments maturing August 1, 1896, on deposited Coupon or Registered Bonds, in case the Baltimore and Ohio Railroad Company should make default in paying the same when due.

Trust Receipts will be given for Bonds deposited, and such receipts will be exchangeable for engraved Bearer Certificates. Application will be made to the New York and London Exchanges for the listing of these Certificates.

Speyer & Co. and Speyer Brothers will make no charge against depositing Bondholders for their services.

INVESTMENTS.

Preferred Income Shares

CLASS "D" (1896) COUPON SHARES are sold at $100. per share. They pay a fixed preferred dividend of 6% per annum. The investment may be withdrawn at par and accrued dividend, any time after one year, on 60 days' notice. Certificates are dated on the day of issue, and coupons fall due semi-annually thereafter. These may be collected through any Bank.

CLASS "C" COUPON SHARES pay 7% per annum. The investment is withdrawable after 60 days' notice, with accrued dividend. These shares command a purchase premium of $5. per share.

Investments are secured by Trust Deeds and Mortgages on carefully selected Improved Home Property located in the Metropolitan District of the City of New York, being paid up by monthly payments. Safety and good returns make the investment exceptionally desirable.

INSURANCE.

1850.—1895.

THE UNITED STATES LIFE INSURANCE CO.

IN THE CITY OF NEW YORK.

This old and reliable Company now has the experience of forty five years of practical Life Insurance, which has taught it that the *sine qua non* of success is the adoption of good plans of insurance, and the pursuit of a liberal policy towards both its Insured and its Agents. These essentials it possesses in an eminent degree, but judiciously tempered by that conservatism which is the best possible safeguard of the policy-holder. Its contracts are incontestable after two years. They are non-forfeiting, providing generally for either paid-up policy or extended insurance, at the option of the policy-holder. It gives ten days of grace in payment of all premiums. Its course during the past forty-five years abundantly demonstrates its absolute security.

Active and successful Agents, wishing to represent this Company, may communicate with the President, at the Home Office, 261 Broadway, New York.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 23, 1896.

It is now considered certain that Congress will adjourn at the latest by the end of the first week in June. The River and Harbor bill, the disposition of which has been, and, indeed, continues to be, the principal obstacle in the way of adjournment, will, it is thought, be passed at once, the differences between the two houses having been accommodated, with one single exception, which in all probability will be arranged in time to admit of the bill being laid before the President on Monday. The President will then have ten days in which to disapprove of the measure, in case he should conclude to take that method of disposing of it. That would bring the session down to June 4, and but two or three days more would be required to pass the bill over the expected veto of the President.

In an interview printed this week, the Spanish minister at Washington said that the order prohibiting the export of tobacco from Cuba was not a political measure in any sense, but was adopted by the government at Madrid after serious consideration to meet an economic necessity; that the government for a long time delayed taking the action because of its injury to commerce, but was driven to the step by the fact that without it over 15,000 cigar makers in Havana would soon be thrown out of work for lack of the raw material, and 50,000 to 60,000 women and children dependent on them would be in danger of starvation. In dispatches printed in yesterday morning's papers it was rumored that Secretary Olney had directed the American minister to Spain to make vigorous representations to the Spanish government relative to the edict, on the ground that it amounts to the practical confiscation of goods in Cuba owned by Americans, and this rumor was accompanied by the announcement that in case of failure to secure an extension of time in which to remove tobacco already purchased, the administration would ask for authority to prohibit by proclamation the importation into the United States of cigars and other manufactures of tobacco from the island of Cuba. The Madrid officials deny that a note has been addressed by the State Department to the Spanish government, but there may be some misconception in relation to the matter.

The choice of delegates to the national conventions of both parties is now progressing towards a close. As usual, the declarations upon the question of the monetary standard take color from the localities where the state conventions are held. In Iowa, for example, the Democratic state convention declared in favor of the immediate repeal of all laws by which silver was demonetized, and demanded its unqualified restoration to the right of free and unlimited coinage in the mints of the United States as money of final redemption at the old ratio of 16 to 1. So the Wyoming Democrats declared in favor of the free and unlimited coinage of silver at the ratio of 16 to 1 without waiting for the action of any other government. In New Hampshire, on the other hand, the Democratic convention declared that under present conditions there can be but one standard of value and that every kind of currency should rest upon a gold basis so long as gold is the standard recognized by the great commercial nations of the world, while in South Dakota no small surprise was occasioned by the Democratic convention declaring in favor of sound money and electing sound money delegates.

An adverse decision has been rendered by the Appellate Division of the New York Supreme Court upon the motion to confirm the report of the commission appointed to pass upon the plans for an underground route adopted by the Rapid Transit Commission. The report of the commission, which was favorable, is decided against on the ground of uncertainty as to the cost of executing the plan and the possibility that the city's debt limit may be exceeded. In one of the opinions the judge says that the commissioners appear to have set the question of cost entirely aside, and have looked upon the question referred to them solely as an engineering problem.

Secretary Carlisle sent to the Senate this week a communication containing his views in relation to the Perkins bill, giving the President power to meet discriminating duties on American commerce. The Secretary declares in his letter that, after careful consideration of the bill, he is impelled to the conclusion that it will be impracticable for the Treasury Department to determine the excess of the direct or indirect bounty or premium on exports allowed by foreign countries over that in force January 1, 1895, and that even if such determination could be successfully reached, it would be equally difficult to determine accurately and to impose increased duties equal to the amount of such excess of bounty or discriminating duty on goods possibly entirely different from those discriminated against by foreign countries. While expressing no opinion as to the policy of enacting retaliatory duties and exactions, the Secretary says that either the duties should amount to absolute prohibition, as under existing law, or there should be an enactment of a definite duty not dependent on the amount of the duty, bounty or exaction levied abroad.

Statistics prepared by the Bureau of Internal Revenue show that during the month of April, 1896, the total receipts from all sources were $11,481,295, as follows: Spirits, $6,139,822; tobacco, $2,372,695; fermented liquors, $2,851,673; oleomargarine, $71,524; miscellaneous, $45,579. This shows an increase in the receipts from spirits of $687,113; from fermented liquors, $269,215, and a decrease of $99,964 from tobacco, $5,191 from oleomargarine, and $26,932 from miscellaneous sources. The net gain for the month from all sources was $824,239. A notable feature of the report is that during the month of April the receipts from cigars and cheroots increased $5,587 and from cigarettes $26,292. During the past ten months the receipts from cigarettes exceeded those from cigars by $103,500, which shows a marked increase in the consumption of cigarettes as compared with cigars.

The Department of Agriculture has issued a general order to inspectors in which it declares it to be the desire of the department that the influence of all employees should be used as far as is warranted by the law for the purpose of securing the humane treatment of animals in transportation and in the stockyards. It is pointed out that depriving animals of food and drink for unusual periods, and beating and worrying them, are practices calculated to make the animals feverish and their meat unwholesome, and should be discountenanced and prevented, and inspectors are directed to instruct their subordinates so as to insure careful treatment of any animals which they may be called upon to handle, and lead them to use their influence for the same end with all other persons with whom they come in contact. The inspectors are also directed to make an investigation of the manner in which animals are transported and handled by the railroad companies and stockyards which come under their observation, and make such suggestions as may occur to them with a view to improving the service and protecting animals from undue suffering or cruelty, and they are instructed that injured animals, which are evidently suffering severe pain, should be promptly reported to the humane societies, unless the owner or the stockyard company properly cares for them within a reasonable time.

From statistics regarding coal production in the United States during the year 1895, compiled by Statistician Parker, of the Geological Survey, it appears that the total output for the year was 171,804,742 long tons, having a total value at the mines of $197,572,477, an increase over the production of 1894 of 19,350,000 long tons, and an increase in value of about $11,500,000. The output on anthracite coal in Pennsylvania increased from 46,358,144 long tons in 1894 to 51,785,122 long tons in 1895, a gain of over 5,400,000 long tons. The value increased only about $3,500,000—from $78,488,063 to $82,019,272—showing that anthracite coal was cheaper in 1895 than in 1894. The product of bituminous coal increased from 118,820,405 short tons of 2,000 pounds in 1894 to 134,421,974 short tons in 1895, a gain of over 15,500,000 tons. The value increased about $8,000,000. There was an increased production in all but five of the twenty-nine coal-producing states.

A Washington dispatch says that the State Department has received a report from United States Consul-General Karel, at St. Petersburg, in relation to the amount of American gold held by the Russian government. He says that on January 1 he saw $30,769,115 in United States gold coin in the coffers of the Russian government. He was invited, with the consuls of other countries at St. Petersburg, to witness the transfer of 50,000,000 rubles in gold ($38,600,000) from the Russian Treasury to the exchange fund of the government bank, where it was needed for the redemption of paper rubles. Included in this store of gold he saw 14,371,756 rubles ($11,000,000) in value of United States half-eagles. While the coinage of all the nations of the world was represented in this particular pile of gold, no other nation except Russia herself came anywhere near the amount from the United States. Japan came next, with only 1,678,519 rubles ($1,200,000) worth of yen, while of British gold there were pounds sterling to the amount of less than 1,000,000 rubies.

RAILROAD EARNINGS FOR THE QUARTER.

Gross and net railway earnings for the first three months of the present year make a very satisfactory showing as compared with the corresponding period of 1895. Indeed, if the ratio of gain for this period by all roads were to be maintained for the entire year the outlook for the transportation interests might be looked upon as quite flattering. It is questionable, however, if this is likely to prove the case, for the second quarter at least, owing to the decidedly less favorable features which have developed since the close of February and which seem to have been accentuated in each month since that time. February and January, it will be recalled, showed heavy gains in gross earnings over 1895, the gain in February on all roads being the heaviest reported, with one exception, in any month for several years past. Preliminary reports for March, however, showed quite a drop in the percentage of gross gain, reflecting the quieter condition of trade and business and less favorable weather conditions in several parts of the country. These conditions have, to a certain extent, impaired the showing made by the quarter as a whole, and have disappointed expectations based on the large net returns of January and February. Added to this, also, is the fact that the monthly earnings returns now making begin to compare with increased earnings growing out of the revival in trade and industry last spring. The gain for April on all roads reported last week was in turn still smaller than that for March, pointing to continued small gross returns, which to a certain extent preclude a gain in net in excess of that reported in March and considerably below the gains made in the earlier months this year. Leaving out the discussion of the prospects for the second quarter of the year, however, it is interesting to note in just what directions the best and poorest returns of gross and net were noted during the first three months.

The total earnings of 132 railroads, covering probably two-thirds of the mileage of the United States, during the first three months this year aggregated $177,070,325, an increase over the first quarter of 1895 of 7 per cent. Net earnings for the same period aggregated $51,732,022, an crease of 9.8 per cent. The following table illustrates the general tendency of earnings during the first three months of this year as compared with the first, second and third quarters of last year and the entire year 1895:

GROSS EARNINGS.

	Three months, 1895.	*Six months,* 1895.	*Nine months,* 1895.	*Year* 1895.	*Three months,* 1896.
Grangers	Dec. 11.5	Dec. 7.7	Dec. 1.3	Inc. 6.6	Inc. 17.8

Mexican	Inc. 16.2	Inc. 23.0	Inc. 36.8	Inc. 3.1	Inc. 2.2
Totals	Inc. 3.5	Inc. 8.1	Inc. 7.9	Inc. 9.6	Inc. 9.8

By far the best showing made by any single group, it will be seen, is that made by the granger roads, which showed an increase of 17.8 per cent. in gross, and a gain in net of 22.8 per cent. This excess in the proportion of net over gross is not confined to the granger roads, but is notable in several other groups, pointing in some degree to the fact that economy in railroad management has not been lost sight of, and also to the generally favorable character of the weather during the opening months of the year. Perhaps the best examples of this latter feature are the gains on the southern, southwestern and Pacific roads, varying from 15 per cent. to 25 per cent, while gross gains are proportionally much smaller. Among the groups which return a less favorable percentage of gain in net than in gross may be mentioned the trunk lines, with a trifling falling off in net from gross, the eastern roads and the coal roads (the only group reporting a decrease), where the falling off is more than 5 per cent. in net as against a drop of only 1.4 per cent. in gross. The following table of increases in gross and net for the quarter illustrates the widespread tendency towards enlarged earnings during that period:

Increases.	*Gross.*	*Net.*
Burlington, Cedar Rapids & Northern	$276,000	$157,000
Chicago, Burlington & Quincy	822,000	530,000
Chicago, Milwaukee & St. Paul	1,306,000	372,000
Erie	361,000	167,000
New York Central	448,000	235,000
Pennsylvania (east of Pittsburgh)	662,000	116,000
Pitts., Cincinnati, Chicago & St. Louis	258,000	95,000
Central of Georgia	264,000	265,000
Chesapeake & Ohio	297,000	50,000
Louisville & Nashville	310,000	31,000
Norfolk & Western	453,000	278,000
Southern	384,000	64,000
Atchison	335,000	559,000
Atlantic & Pacific	122,000	107,000
Denver & Rio Grande	134,000	57,000
St. Louis & San Francisco	141,000	89,000
Canadian Pacific	947,000	361,000
Northern Pacific	438,000	284,000
Union Pacific	181,000	290,000
Mexican National	156,000	79,000
Elgin, Joliet & Eastern	175,000	80,000
Illinois Central	472,000	80,000
Wabash	140,000	153,000
New York, New Haven & Hartford	450,000	337,000

The heaviest increase in gross above shown is that made by the St. Paul, which is in excess of $1,300,000, and next to this is the Canadian Pacific, with an increase of $947,000. The heaviest gain in net, however, is that reported by Atchison, $559,000, Burlington being second with $530,000 gain.

The two groups in which the net returns are relatively least favorable are the coal roads and the roads traversing the New England and middle states. The showing made by the coal roads, as a whole, is far from satisfactory, and, in fact, only two of the twelve roads in this group show any gain in net, although five of them show increases in gross. On the eastern roads it is worth mentioning that such systems as Boston & Albany, Boston & Maine and the Fitchburg all show increases in gross, while the net returns are smaller than a year ago. Were it not, in fact, for the large increase reported by the New Haven, a considerable falling off in net earnings would have to be reported in this group.

GROSS AND NET EARNINGS FOR THREE MONTHS.

		Gross earnings 1896.	1895.	*Net earnings* 1896.	1895.

THE GOLD MOVEMENT.

The shipments of gold to Europe this week have been below the recent average in respect to their amount. The total withdrawals have been only $2,720,000, as compared with an average of from $3,000,000 to $4,000,000 for several weeks past. Nevertheless, including the exports during the last six days, the whole amount of gold that has been taken from this country and shipped to Europe, principally to the continent, since April 4 is no less than $16,275,000.

There was little in connection with the exchange market and the specie movement at the moment which would call for extended comment. Early in the week, indeed, it was stated that the "special" orders from Germany for gold, which enabled certain houses to ship to that country while the market quotation for demand sterling was as low as 4.88½@4.88¾, or about one-half to three-quarter cent below the normal figure at which gold transfers could be made direct to London, had been exhausted. The amount of the orders in question was estimated at about $3,000,000, which would correspond pretty closely with the amount of gold that has been secured here. While no accurate information can be obtained in regard to the source of this order, a belief still prevails in banking circles that it emanated, directly or indirectly, from the Russian Treasury, and in view of this more or less attention has been paid to a fact in connection with Russia's holdings of gold that has just come to light. It seems that the enormous stock of gold held by the Russian Treasury and Imperial bank, the latter being for all practical purposes a department of the former, includes no less than $30,000,000 in American gold coin. A statement is, however, made, purporting to come from the Russian Ministry of Finance, that this sum in American coin is by no means of recent acquisition, but represents parcels of American gold that have been obtained in the open market in Berlin and Paris during several years past. The inference would be that the gold which we have recently lost, if its transfer is due to Russian initiative, has been used to supply the place of corresponding amounts transferred from Germany to St. Petersburg. At the close of the week, indeed, the stronger tone of the exchange market, due to relaxed pressure of bills by gold shippers, seem to disappear, and at the same time intimations were heard that further "special orders" of the same kind as before had made their appearance, in view of which the market is once more forced to contemplate the possibility of continued drains of this character, though, as was pointed out in these columns a week ago, there is nothing unusual in a heavy outward movement of specie during the current month or the two succeeding ones, the record for many years past showing a considerable average of exports. In this connection the following table, presenting the net gold movement during May, June and July for the ten years from 1894, inclusive, will be of interest. In every case, except where noted, the balance is an unfavorable one. The year 1895 is omitted, owing to the fact that the exchange market was then in an entirely abnormal condition. The figures are as follows:

	May.	*June.*	*July.*
1894	$23,224,053	$22,433,593	$12,841,030
1893	15,205,760	1,701,544	Imp. 5,776,401
1892	3,267,783	16,736,589	10,240,198
1891	30,368,112	15,539,494	5,633,526
1890	7,718	3,345,536	10,682,525
1889	12,691,139	17,472,209	4,425,354
1888	7,557,495	2,861,106	3,482,806
1887	Imp. 607,670	115,063	Imp. 1,681,976
1886	7,272,497	8,129,300	595,239
1885	829,246	522,229	741,158

BUSINESS MEN ON THE SOUND MONEY ISSUE.

The question of questions pressing for settlement in the United States to-day is that of the country's monetary standard. This is an issue which is not to be put by or to be evaded by any devices of political managers. It is not to be obscured or belittled by any policy of "masterly inactivity" or of "dignified silence." The people of the country want to know just where parties and candidates stand in relation to the question of a monetary standard, and they have a way once in a while of carrying their point, as politicians have occasionally learned to their discomfiture. The business men of the country have taken occasion to bring the matter to the attention of the party managers this year with a degree of persistence that cannot have been without its effect.

It is with especial pertinence that such an organization as the Savings Banks Asso-

ciation of the State of New York has put itself on record in relation to the question of a monetary standard. The savings banks have as their primary object the supplying a means or system of providence for the thrifty poor. It is the man of small means who will be most seriously affected by any debasement of the money standard, and it is to his interest to a degree far beyond that of the capitalist to have maintained a stable and honest standard of value. The association referred to has, therefore, done well to adopt, as it did at its annual meeting on Wednesday, resolutions solemnly protesting against any and all efforts to change the gold standard now existing, insisting that any departure from this standard will not only impair the prosperity of all laboring classes, but that the only classes or individuals to be benefited would be the capitalist and foreign investors, who would be quick to take advantage of the rise and ultimate fall in prices sure to follow a premium on gold, and declaring that the future prosperity of the country and the welfare of the people demand not only that the gold standard should be maintained, but that the currency system now in use be so changed and remodeled as to meet and adapt it to the increasing needs of commerce and render it equal in security with the best in circulation by any of the civilized nations of the earth. The association adopting these resolutions represents the interests of 1,700,000 depositors with deposits aggregating over $700,000,000.

The declarations contained in the resolutions were accentuated in the address of President Rhoades, who said that the return of prosperity could not be hoped for until the currency question is settled upon a basis which will place and keep our credit equal to that of the most favored nations of the world. Whether the time for this settlement is near, or far distant, he said, will largely depend upon the results of the coming election; and, indeed, upon the issues at stake rests the welfare of the people at large, and especially of those so largely represented by the savings banks, for, as is well known, those who gain the most through a sound currency, or lose and suffer most through one that is inflated and in a disordered condition, must be the laborer and the producer. President Rhoades expressed the belief that the judgment and good sense of the common people, who have always been the strength and mainstay of the country in its time of need, and the great mass of whom are not only honest, but think deeper than is apt to be imagined upon all matters which affect the welfare of the community, will settle, at this coming election, once and for all, this momentous currency question which, for the past ten years, has disturbed our commerce and blocked our progress as a nation, and render at the polls a verdict which will determine for all time the fact that the people of the United States of America will not consent, under any condition or through any compromise, to depart from the standard of value which is recognized by all the civilized nations of the world as the best and only standard to maintain.

Of similar import to the resolutions referred to above are those adopted on Monday by the New York Cotton Exchange. These resolutions declare that the continued uncertainty in regard to the monetary system of the nation has caused widespread financial and commercial distrust, crippling enterprise and paralyzing the trade of the country; that a sound and stable currency is absolutely indispensable to our national and commercial prosperity and the chief means of restoring confidence at home and abroad; that the New York Cotton Exchange is unequivocally opposed to any debasement of the currency and emphatically declares in favor of and urges the maintenance of the present gold standard of value, recognized by the great commercial nations of the world; that the question of the permanence of the gold standard should now be settled, and that it should be considered the paramount issue at the coming election by both political parties, and that the conventions of the two great parties be earnestly asked to clearly and distinctly declare themselves in favor of the gold standard, and against the free coinage of silver, so that the country may enjoy the prosperity which its mighty resources justify and warrant. The exchange directed that copies of these resolutions be sent to the various cotton exchanges of the country, inviting their coöperation. This action has a significance which does not appear on the surface, for the reason that the cotton exchanges are mainly confined to a section of the country where financial vagaries have recently found a foothold. It will be seen from the action of the bodies referred to above that the commercial community is this year doing what it can to put a premium on a clear definition of the principles held by candidates and parties in reference to the monetary standard.

THE CUBAN TOBACCO EMBARGO.

A recent decree of the Spanish authorities will have an important effect upon one branch of the trade between Cuba and the United States. This is the decree prohibiting the exportation of tobacco from the island after May 26. It is estimated that millions of dollars are invested by American buyers in the tobacco leaf as it now hangs in the dry-houses, and that the tobacco is in such a stage or condition that it cannot be safely removed inside of a period of about sixty days. Any attempt to handle the leaf in its present condition would, it is said, result in great loss to the purchasers. These facts have been brought to the attention of the government at Washington, which has been asked to use its good offices with the Spanish government to procure an extension of the time limit for sixty days. What will be the result of this application remains to be seen. In the meantime, the American buyers are in a condition of some anxiety, while some of the factories engaged in the manufacture of Cuban tobacco are contemplating the restriction, and, in some instances, the suspension, of their work.

The exports of tobacco from Cuba form a very important portion of the island's shipments abroad. The United States took in 1895 20,175,620 pounds of leaf tobacco, valued at $7,271,795, besides manufactures of tobacco to the value of $2,040,186. These figures represent, as far as the leaf tobacco is concerned, a very considerable increase as compared with the year 1886, when the United States imported only 10,883,666 pounds of leaf tobacco, valued at $4,074,299. The increase has been, in the main, constant, the most marked exception being found in the falling off in the takings of leaf tobacco from 21,694,881 pounds in 1893 to 14,578,248 pounds in 1894, a decline from which the year 1895 did not show a complete recovery. The takings of manufactures of tobacco in the period under review show a decline, though not an entirely constant one. The manufactures of tobacco taken by the United States from Cuba in 1886 were valued at $3,191,280, while the takings in 1895 were valued at $2,040,186. These figures seem to point to an increased employment of the raw material by American manufacturers in the interval, for the use of Cuban tobacco in the United States has been on the increase.

Captain-General Weyler's proclamation prohibiting the exportation of tobacco from Cuba took effect on May 16 as regards stock not already bought, and will take effect on the 26th as regards that bought prior to the 16th. Only ten days was thus allowed for the removal from Havana by foreign manufacturers of large quantities of tobacco already purchased and in store there. Cigar makers in Tampa have paid $700,000 for tobacco now held in Cuba awaiting shipment, and other Florida manufacturers as much more. As the removal of this stock from Cuba before next Tuesday is out of the question, Weyler's order amounts to confiscation of nearly $1,500,000 of property in Cuba owned by Floridians, to say nothing of large amounts owned by other American and foreign manufacturers. A special from Washington to the *Florida Citizen* intimates that Secretary Olney sees a way to secure a modification of the decree, at least to the extent of getting adequate time for the removal of tobacco already bought. Apart from this side issue, the question arises what effect the interdict of exports from Cuba, if it holds, will have on American cigar manufacturing. The situation at Tampa may be regarded as typical, that city having 139 cigar factories, large and small. The consensus of opinion there is that the smaller factories will be compelled to shut down before the end of the summer. Many of the larger ones have sufficient stock to carry them for several months, but even they will be obliged to decline new orders in order to hold old customers. As a rule, manufacturers profess to believe that some way out of the woods will be found before the situation becomes serious, either through the action of United States and other governments, or the achievement of Cuban independence. Meanwhile the price of Havana tobacco, which has gradually increased for several months, is still further advancing.

BILL RESTRICTING IMMIGRATION PASSED BY THE HOUSE.

Legislation dealing with immigration has engaged the attention of the House this week. A debate upon the subject was brought about on Tuesday, when the McCall bill, providing an educational test for immigrants in the future, was called up for consideration. This bill provides that immigrants must be able to read and write some language before admission, though it does not apply to the parents of any person now residing in the United States. An amendment was immediately offered to the bill by Mr. Corliss, of Detroit, in the shape of a measure framed to relieve the lake cities of the competition of Canadians who come into the United States temporarily to labor, and especially to prohibit the employment of Canadians on vessels engaged in the lake trade, and on railroads running into the United States from Canada. Another amendment was offered which required, in addition to the educational test, a satisfactory consular inspection of the immigrants at the port of departure, without which admission to the United States is to be denied. Some other amendments were ruled out on points of order, one of these being a provision excluding any foreign-born laborer, skilled or unskilled, after August 1 next.

The debate which followed developed some points of interest. The provisions for restriction were advocated in large part on the ground of the need of protection to labor. This was the line taken by Mr. Stone, of Pennsylvania, who said that if there was anything from which the country was suffering it was a superfluous immigration. As an illustration he pointed out his own state, which, he said, was suffering from the presence of a large foreign population, which had no interest in local affairs and whose race riots disgraced the state. Emigration to the United States from many of the countries now sending its citizens here in large numbers was, Mr. Stone said, a matter of recent years, and a stop must be put to it if we expect the United States to become what we have wanted it to. The agitation upon this subject, Mr. Stone said, "will not cease until we give to labor the protection to which it is entitled, and which we have given to capital."

Somewhat similar ground was taken by Mr. Corliss, of Detroit, who said that 100,000 Canadian laborers, "birds of passage," came to the United States and entered into competition with the laborers of this country. They carried their earnings back to Canada with them, refusing to make their homes here. There was nothing in the amendment he had suggested which would prevent any of them from acquiring a home in the United States, but it was intended to prevent them, until they felt so inclined, from coming into competition with the laborers of the United States, and receiving the high wages which should go to the citizens of this country. Arguments in opposition to restrictive measures were not lacking in the debate, though the weight of numbers was on the other side. Some members held that enough restriction had already been thrown about immigration, while others, who did not seem to be greatly opposed to an educational test, objected to the requirement of a system of consular certification. The most noteworthy feature of the debate was the injection of the argument which played so large a part in the debates preceding the legislation against alien contract labor, and which, it was thought, would prove a less prominent consideration before the mind of Congress than it was formerly. The House passed the bill with the Corliss amendment, but rejected the amendment providing for consular inspection of immigrants.

UNITED STATES RUBBER.

Somewhat contrary to the general expectation, the annual meeting of the United States Rubber Company, which was held at New Brunswick, N. J., on last Tuesday, was not marked by any contest for control. On the contrary, the interests which were supposed to be at variance displayed a most harmonious disposition, and the very gentleman who it had been rumored was about to organize an opposition concern was entreated by the management itself to accept a place in the board of directors, having personally denied all the reports to which reference has been made. This rendered the proceedings comparatively tame, there being very little to add to the showing made by the company's report for the year ending April 1, 1896, beyond a reference to the fact that the new management is said to be making praiseworthy efforts to cut down

expenses of administration and for legal purposes, and has, in fact, made considerable progress in such direction. The figures of the report, compared with that of the preceding year, are as follows:

Year ending April 1.	1896.	1895.	*Changes.*
Profit from op. plant and income on investments.	$2,630,939	$2,930,243	Dec. $297,304
Rent, expenses, etc	293,148	213,873	Inc. 79,275
Balance.....	$2,330,791	$2,716,370	Dec. $376,579
Dividends pref'd stock...	1,552,040	1,552,040	....
Balance.....	$778,751	$1,164,330	Dec. $376,579
Dividends 2½ per cent. common stock.....	....	504,150	Dec. 504,150
Surplus	$778,751	$660,180	Inc. $127,571
Previous surplus.....	632,217	216,037	Inc. 660,180
Total surplus.....	$1,410,968	$876,217	Inc. $787,751
Charged depreciation....	1,253,954	....	Inc. 1,253,954
Net surplus	$410,014	$876,217	Dec. $466,203

The report says that there is $1,911,698 in earnings on investments which have not yet been paid into the treasury of the company.

The balance sheet which accompanies the report shows an increase of $604,848 in assets, of which $328,605 is in the item of cash, and the surplus of assets decreases $466,204. The report, in commenting on the condition of the trade, states that prices of crude rubber have ranged considerably higher during the year because of large consumption for bicycle and other tires and for electrical uses. As crude rubber is the largest item in the cost of manufactured rubber, the higher price has added considerably to the cost of manufacturing, and, as the uses of crude rubber are increasing, it would seem as though the higher prices for it would continue in the future. The company has broadened its facilities for the purchase and manufacture of crude rubber, and some progress has been made in economies in manufacturing, and there are still greater possibilities in this direction. Sales of rubber footwear are largely affected by the weather, and as last winter was mild in most sections, and business generally depressed, sales of footwear did not equal those of previous years.

THREATENING BRITISH IRON AND STEEL INTERESTS.

At the recent meeting of the British Iron Trade Association, London, the paper by Mr. William Jacks on continental competition proved not only important, but of immediate interest to the representatives of the association. The writer of the paper, it is explained, had had more to do with the investigation of continental competition with Great Britain in iron and steel than perhaps the president of the British association himself, and has been giving attention to the subject for years. His conclusion is that the report made by the delegation sent to the continent to investigate the subject, although accurate in the main, did not go far enough. He pointed out that it covers only a limited field, and that the rates of wages and the conditions generally at the German works visited represent what some of the English trade papers have characterized as the "aristocracy of continental labor." This is rendered the more emphatic by the claim of the London *Iron and Steel Trades Review* that it is from Westphalia—from the works and the workmen chiefly described in the delegation report—that the most successful competition comes, and that, compared with the extent of the exports from Westphalia, those from other German iron centers are comparatively insignificant.

The British have, therefore, after all, "to come back to the fact that the Germans beat us, despite the payment of comparatively high wages, and despite, also, less favorable conditions than our own in reference to supplies of raw materials." The matter is one which has not been settled by the reports already made, although the evidence they afford is decidedly helpful in enabling a clearer and more accurate judgment to be formed as to the true conditions of the British iron trade relatively to that of continental Europe.

The paper read by Mr. Jeremiah Head on the iron industry of Alabama, with special reference to the prospects of the importation of Alabama pig into European markets, deals with a subject that is likely to occupy increased attention in the future, if recent reports are true. Mr. Head's paper shows by a large number of important facts and figures the singularly unique combination of resources possessed by Alabama for the production of cheap iron, and he also proves conclusively that pig is being made at Birmingham (Alabama) for a good deal less than it could be produced at in this country. On the other hand, the iron works are between 250 and 300 miles from the seaboard, and the future of Alabama pig iron in European markets must necessarily depend upon the range of railway and ocean freights. If these continue to fall as they have done in the past, and if the cost of producing British pig iron continues to tend upwards rather than downwards, the competition of Alabama at Glasgow, Liverpool, and even at Middlesbrough, may become a much sterner reality than it has seemed to be up to the present time, although this is not apprehended.

EXTENDING THE JOINT TRAFFIC ASSOCIATION.

Reference was made in these columns last week to the efforts that are in progress to extend the influence and usefulness of the Joint Traffic Association of the trunk line railroads by bringing into the combination the few remaining competing lines which have thus far maintained an independent attitude. As then stated the Canadian Pacific and the Norfolk & Western were the principal companies whose coöperation was desired. No time has apparently been lost by the committees appointed at the recent meeting of the association's board of control to submit the proposition to the officials of the roads in question, though the results as announced this week in the public press have not been altogether what would seem to have been desired. The Canadian Pacific, through its president, Sir William Van Horne, has indeed signified its readiness to consider the question and to have a conference between its representatives and those of the association with a view to its joining, though the somewhat significant qualification is annexed to its communication, that such accession is dependent upon the company being given satisfactory terms. As the Canadian Pacific enjoys so many advantages in the conduct of competitive business as compared with the American lines, which are hampered by the interstate commerce law, it is easy to understand that its managers will be slow to curtail or surrender them unless, indeed, concessions of a substantial nature are made.

The other principal outside road, the Norfolk & Western, has, however, taken a different stand. As its line extends from Columbus, Ohio, to tidewater at Norfolk, Va., the company is in position to compete for through freight, and is, in conjunction with the minor interior roads, capable of becoming a disturbing factor in the rate situation. It does not appear that this has actually happened, or that its management are inclined to assume such a position. Being in the hands of receivers who are officers of the courts, there is also some hesitation on their part about affiliating the property under their charge with a body the legality of which is at present under judicial examination. The reply of the Norfolk & Western receivers to the invitation of the association's committee refers to this circumstance, and also takes the ground that the competition of their system is with the southern rather than with the eastern and trunk line roads, and they accordingly politely but firmly decline to join. It is understood, however, that pressure will possibly be used with the principal owners of the Norfolk & Western property to secure a reconsideration of this decision, and the opinion in trunk line circles is that, while the company's adhesion to the association may be delayed till the reorganization is completed, it will ultimately be secured. It may also be mentioned that the Seaboard Air Line system, one of the companies which had also been brought into communication with the Joint Traffic Association, has promptly agreed to conform to the rules of the latter body so far as its business partakes of a competitive character with the lines in the association.

These incidents are held in railroad circles to point to the continuance of efforts to enlarge and strengthen the new trunk line combination. There is no doubt about the satisfaction which the larger railroad interests feel regarding the practical working of the new organization. It is a common remark that at no time in recent years have trunk line rates been so regular and so well maintained. Rebates and discrimination between shippers have almost disappeared, and it is reported that the officials of the leading roads are earnestly in favor of extending the field of the association's activity so that it will include all the roads east of the Mississippi river, including those of the southern states. The fact that the interests and competitive relations of the roads in various sections overlap more or less is obvious, but the danger of a body of this kind becoming unwieldy is also plain, while it is to be also considered that while the government's action to test the legality of the organization is still before the courts, the railroad authorities would be slow to take a step of this importance. It therefore seems probable that the matter will be considered and nothing decisive undertaken till the legal status of the association is finally determined by the courts.

STATE RAILROAD COMMISSIONERS IN CONVENTION.

Addresses and discussions before the annual conventions of state railroad commissioners are not confined to contributions from the state officials themselves, but the annual gathering at Washington has become a free forum for the discussion of railroad problems from all points of view. At the eighth annual convention, held this week, the first paper read was by President A. B. Stickney, of the Chicago Great Western Railway Company, who dealt with railway rates and the limitations upon the control thereof by the state. Touching the question of reasonable rates, Mr. Stickney said that in respect to a railway company which is not collecting enough revenue to meet all of its obligations, it should be and is only necessary for the court to inquire and determine whether the rate is too high or too low to produce in the long run the greatest possible revenue from the class of traffic to which the rate applies. This, he contended, was the only question involved in the problem of a reasonable rate under such conditions, and if a railway is collecting a larger aggregate revenue than is just and reasonable, the aggregate revenue may be decreased by either raising or lowering the rate, as public policy may demand. While, Mr. Stickney said, this proposition was a novel one, he argued that the holders of railway securities have a clear case of right, supported by the letter of the law, to see that their interests are not sacrificed. Another railroad official, Mr. W. P. Clough, vice-president of the Great Northern Railway, read a paper in which he said that while the average earnings per unit of traffic had materially decreased in recent years, such decrease was not due to the operations of the law, but to other and varied reasons. The great enemy to large railway earnings was water competition, but the greatest rivalry was that of products and regions. The products of the United States were not only diversified, but no section had any longer a monopoly of any particular product, and products and markets were nearer together.

The question of the protection of public interests during railway labor contests was discussed in a report of a committee appointed to consider the matter, the report being read by Secretary Moseley, of the Interstate Commerce Commission. The report condemned the use of the army in such emergencies, and also the employment of the process of injunction as impracticable and offensive to the genius and spirit of the American people. Arbitration was proposed as the only safe and satisfactory method of healing the differences that often arise between railroad companies and their employees. The report, therefore, recommended legislation that should compel the antagonists to submit to mediation and a fair settlement of mutual grievances, and favored the passage of the act now pending in Congress providing that, when controversies between a carrier and its employees shall be of such a character as to obstruct or threaten to obstruct the operations of its railroad, the Attorney-General may file a bill in equity to prevent the commission or continuance of the public mischiefs caused or threatened in any circuit court of the United States, and praying for the appointment of a receiver of the road pending the continuance of the controversy. A provision was also recommended preventing private individuals or corporations from invoking this remedy. This legislation, it was contended, would really be in furtherance of arbitration, and would bring a pressure to bear upon the managers of the roads and upon the employees, who would see their interest in the speedy settlement of their controversies. The managers, it was said, would submit themselves and their interests to an arbitration board, rather than to temporary government control.

Government ownership of railroads was discussed in a report which expressed the opinion that the sentiment in favor of government ownership is due not only to the practice of discriminations between persons and places, but also to the over-capitalization of railroads and the delay under our present system of adjudicating differences between the railroads and their patrons. The report expresses the belief that the matter of political patronage and corruption could be guarded against by proper civil service rules and regulations, and that railroad labor troubles under government

ownership would be less frequent, if not cease entirely. It was not advocated, however, except as a last resort to correct evils and abuses under which the public, and to some extent the railroads themselves, are suffering.

THE ADVANCE IN ELECTRIC SCIENCE.

One of the most striking illustrations of the advance in the handling of electrical appliances and the increase in the facilities with which electrical energy is controlled was that exhibited at the electrical show in New York city last week, by the sending of messages around the world by means of a current generated by the Niagara power plant, more than four hundred miles distant. In this instance the telegram was sent to the uttermost parts of the earth, as it were, and returned to New York in fifty minutes, the complete circling of the globe, in fact, being prevented only by the lack of a transpacific cable. In its travels the dispatch went from New York to Chicago, thence to Los Angeles, to San Francisco and to Vancouver, and then through Canada by way of Winnipeg and Montreal, and across the Atlantic to London. From that point it was sent to Lisbon, Gibralter, Malta, Alexandria, Suez, Bombay, Madras, Singapore, Shanghai, Nagasaki, and then to Tokio, Japan, when it was returned by the same route, the distance traveled being 27,500 miles, and the time occupied, as stated, fifty minutes, including repetitions of the message. Telegrams were also sent from New York via Galveston, Mexico and around the South American continent, to Lisbon, London, and back to New York, or more than 10,000 miles, in twenty-one minutes' time. As has been pointed out in a number of instances within the week, the marvelous character of this demonstration of the rapidity of communication about the world is best appreciated when it is recalled that there are men now living who were present at the birth of telegraphy, and those of not advanced age who were alive when the first ocean cable was laid.

In the course of an address delivered while the messages were on their way round the world, Mr. Chauncey M. Depew gave some statistics showing the development of the telegraph and telephone. He said :

> Thirty years ago there were 75,000 miles of wire in the United States; to-day there are 1,000,000 miles. Thirty years ago 5,000,000 messages were annually transmitted by telegraph ; now there are 60,000,000. In a quarter of a century the receipts of the telegraph companies have increased from $7,000,000 to $25,000,000 per year. Since the opening of the telegraph the imports and exports of the United States have grown from $220,000,000 to $1,600,000,000, while the internal commerce of the country has grown from about $1,000,000,000 to the fabulous figure of $25,000,000,000 a year.
>
> Said the great English scientist, Sir William Thompson, at our Centennial Exposition in 1876, after he had examined the telephone: "What yesterday I should have declared impossible, I have to-day seen realized." In twenty years the use of the telephone has become such a necessity in our daily life that the mileage of the telephonic wires had increased to 600,000 miles and the number of telephones to 700,000. Nothing more distinctly illustrates the truth of the charge that the Americans are a talking people than the statistics of this wonderful instrument, for during the last year there were had over the telephone wires of the United States alone 670,000,000 conversations. And yet the telephone is only partially developed.

The prophecy as to the future from the gentleman named is particularly interesting. He said :

> The next feat of electricity, now almost accomplished, is to be its use in transportation. It is to accelerate the speed and increase the comfort of the passenger train, and to reduce the cost for the revolving wheels of the freight car ; it is to be largely the substitute for the horse, for the agriculture and the road wagon ; it is to furnish the light for dwelling and factory, for hospital and highway; it is to give the heat for cooking and for comfort; it is to be the power for the machinery of the mill and the press of the newspaper ; it is to be the motor for transportation by land and sea.

While there is no immediate likelihood of the locomotives of the country becoming old iron, nevertheless, he who runs may read the signs, already plainly visible, that electrical energy is destined to become the motive power of the future.

COLORADO MINING COMPANIES.

To the Editor of BRADSTREET'S :

SIR—The peculiar methods of organizing mining companies in Colorado render their stock a curiosity to distant investors. Not being understood, it is often shunned, even by those who would be willing to make an investment in mining properties. When the casual inquirer finds that the authorized capitalization of the new companies for 1895 was half a billion, and that companies which are capitalized for a million each and call their stock "full-paid" have to borrow money to pay their registration fees with the secretary of state, he is apt to think that the stock must be all water, or something yet more vaporous and unsubstantial. The local market reports confirm the impression. The exchanges claim to be wonderfully careful about listing none but the stocks of the best and most prosperous companies. In fact, not a tenth of the companies organized are ever heard of on the exchanges. Notwithstanding this, most of the listed stocks sell at only a few cents on the dollar.

The stocks are not, in fact, as dangerous as they appear at first sight to be, and yet there are weaknesses in the methods of financing our mining companies which need to be clearly understood by all who would handle the stocks.

The bugbear of many easterners who invested in California and early Colorado mining companies is the assessment. It was the thumb-screw which unprincipled majorities used without mercy in dealing with the small investor. Consequently, all the Colorado companies issue non-assessable stock. Another source of grave corporate abuses has been the borrowing power. Consequently, the laws of Colorado withhold from the directors of a mining company the right to mortgage its property, or in any way put a lien upon it. Another device for protecting the holder of Colorado mining stock from exactions consists in issuing the stock as "full-paid." The statutes do not provide for this, but a legal fiction has been called in to serve the purpose. When a company organizes, all the stock—usually a million or more one-dollar shares—is issued in payment for a mining claim or claims, which the incorporators, acting as individuals, sell to themselves, acting as directors of the new company. The claims are "estimated" to be worth the par value of the stock issued. The law provides that stock may be issued in exchange for property at a fair valuation, and the courts hold that an "honest overestimate" of the value of the property will not invalidate the transaction. The full-paid quality of Colorado mining stock, therefore, depends upon the view which the courts may ultimately take of the "honesty" of the initial estimate.

But the new million-dollar company is a pauper so far as ready money is concerned. It has exchanged all its stock for claims, and now has not a cent with which to develop these claims. Through anxiety to make the organization powerless for evil it has been made altogether impotent. Under these circumstances, the generous vendors of the claims next make a present of a certain proportion of the stock they have received to the treasury of the new company. This is known as treasury stock, and from its sale the company gets all the money for development work that comes to it from any source. Unless the claims are particularly promising, this treasury stock has to be disposed of for a few cents a share, and the company consequently secures but very little money to operate with. If, of the million shares, two hundred and fifty thousand have been donated to the treasury, and these are disposed of at 5c. a share, only $12,500 will be realized. Many of the companies recently organized have obtained very much less than this—so little, in fact, that mining operations cannot be undertaken or pushed far with the amount secured, and the companies perish miserably for lack of funds.

Often the incorporators are not well informed as to methods of procedure, and they turn a lot of the stock directly into the treasury without putting it through the magic routine that is supposed to make it full-paid. Treasury stock, under these circumstances, brings special liabilities to the purchaser, but where the right course has been taken it is locally regarded as preferable to the other for some occult reason not easily understood. The principal task of the attorneys employed by the mining exchanges to scrutinize applications for listing is to ascertain that the stock has been so issued as to give all of it the full-paid quality. There is no attempt to deceive anyone by the adoption of the tortuous methods used in getting a Colorado mining company into existence, but it necessitates constant explanations and constantly provokes adverse comment. Manifestly the value of the stock of such a company as I have described depends upon two things—first, the value of the claims acquired, and, second, the amount realized from the sale of the treasury stock and the honesty and intelligence with which this is expended in development. For the first the opinion of a mining expert is requisite, and as to the second, one must judge from his knowledge of the men in control of the company after he has had access to their books.

The mechanical guarantees of corporate honesty which one looks for in the statute law of each state have not been very well worked out as regards mining companies in Colorado. The original incorporators can control the company for a year without a meeting of the stockholders. After that a majority of the stock can manage things pretty much as it will. No reports are required to be made to any public officer. A stockholder has the legal right to inspect the books, but if an opportunity is denied him, the remedy supplied by the law is dilatory and ineffective. The statutes give a stockholder no right to inspect the mine. The courts will accord the right, but only after expensive proceedings, in which delay is apt to make the final victory worthless. It is thus apparent that if directors or managing majorities see fit to resort to the well known methods of wrecking or bleeding a company it is difficult to prevent corporate rascality.

These considerations appeal but little to the mind of the local mining broker, because he is handling stocks for the purpose of turning them at a profit. A good strike on the property of a company, or on adjacent property, or even in the same camp, will send its stock up irrespective of these fine drawn considerations as to the security of the small investor. The writers for the local press on mining topics understand mines, but have thought little about company organization. The mining lawyers are interested mainly in mining law proper, and have considered hardly at all the effect of corporation law upon the willingness of easterners to invest in mining stocks. The suggestion that it would be a good thing if Colorado were as famous for wise laws regulating mining companies as for rich mines is met with a silence that indicates ignorance as to the import of the suggestion.

Local attempts to give security to stock investments, provided the properties owned by the companies are valuable, have come mainly from the more conservative mining exchanges, which scrutinize with a good deal of care the operations of the companies which they place upon their regular lists. Trust companies have also been organized that make a business of certifying to certain specified things regarding the companies that register with them. Their influence for honest and conservative management is considerable, and the rather detailed law under which they operate seems to be well planned for insuring their own solidity. Beyond this, of course, many of the companies are managed by persons of intelligence and honesty, who appreciate the profitableness of a management that is transparently honest.

The average, and one might almost say the typical, Colorado mining company, however, is a concern with a high capitalization based on great expectations, but having little ready money with which to operate. The reckless multiplication of these semi-pauper companies broke the back of the boom in mining stocks. Last December the easiest way to sell a mine or "prospect" was to organize a company and sell the stock. Now there are many investors who want mines but will not touch stocks, and the cheap shares are such a drug in the market that it often happens that a third of the stock of the company can be bought for much less than a third of what would be an obtainable price for the claims owned by the company.

A. G. WARNER.

Manitou, Col., May 4, 1896.

STATISTICS AND STATISTICS.

To the Editor of BRADSTREET'S :

DEAR SIR.—Many years ago, when I first undertook an analysis of the consumption of food by the people of the United States, I collated all the evidence which could then be found (much of it of rather an uncertain character) upon the average consumption of wheat flour per head. Authorities varied in some degree, but, for the purposes of my treatise, the estimate of one barrel of flour per year to each adult appeared to be so near the fact as to be justified. How much wheat was expended at that time in making a barrel of flour was a matter on which testimony varied in very considerable measure. My purpose was to establish a certain general proposition, namely, that about one-half the expenditure of about ninety (90) per cent. of the people of this country was applied to the purchase of food material, the proportion increasing as the income diminished. Subsequently to that date the very exhaustive analyses of

Commissioner Wright have rendered this point more clear, and have established variations in different parts of this country for which the data had not previously existed. Yet, on the whole, the rule is sufficiently well established to prove an economic proposition on the lines which I have given you; but that is a very different matter from undertaking to measure the exact production and consumption of wheat for commercial purposes, a matter which I think it very injudicious for the Department of Agriculture to undertake *a priori*. It is one which should be left strictly to commercial methods, lest the government itself should be charged with intentional variation in order to create a favorable impression as to the prospects of any given crop. I am thoroughly well informed on both the government methods in attempting to measure crops in advance of their being gathered, and I am also well informed on commercial methods. My judgment has been for many years that the work of the government should be limited to giving the general conditions throughout the country, leaving it to commercial authorities to deduce the probable crops in bales or bushels from the facts collated by the government and checked off by commercial agencies.

There is one aspect of this case, however, to which I think your attention should be called. I think it is now fairly well proved that the consumption of wheat flour is more than one barrel per adult per year, yet that does not vitiate the previous estimate. Between the dates on which my own estimate was based and down to the date of the panic, due to the silver craze, in 1893, there has been a progressive increase in the purchasing power of the great masses of the people of this country, and I have no hesitation in saying that in my judgment there has been a substantial increase in the consumption of wheat per capita during that period. It is well proven that there has been a very positive increase in the consumption of many other articles, and with better intelligence there is also a higher standard of living, and better conditions in the preparation of food are practiced. Can there be a doubt that such has been the fact, and may not they have led to a more abundant consumption of wheat bread?

All these matters tend to sustain the effort to establish a permanent Census Bureau. None, I think, distrust mere statistics more than those who have had the most to do in compiling them. Unless one is qualified by observation and judgment of the facts, of which the figures are but symbols, he may be most assuredly misled in many ways by accepting many of the figures which are put before him.

I take this opportunity to point out one of the most fallacious statements that has ever been put before the public, to wit, the census statistics of manufactures of 1890, on which many stump speeches have been made and will be made. One only needs to run over the list by titles to witness the total lack of authority of this table, and the fallacy of all comparisons between this table of manufactures and those of previous decades.

I have before me a comparative statement for 1880 and 1890 of the statistics of manufactures for sixty-seven (67) industries, having a product of thirty million dollars ($30,000,000) or over in 1890. By what justification can "carpentering," in a miscellaneous sense, be listed under the head of "manufactures"? Yet there we find it. Under another title we find the "repairing of carriages and wagons" listed under the same title. "The repairs of railway cars, steam and street," are also included. The "grinding of coffee" is held to be a manufacture. "Masonry," in a general sense, is listed. "Slaughtering and meat packing," which did not appear until within a very short period, now count under the title of manufactures, nearly six hundred million dollars ($600,000,000). Under each of these titles there is an enormous expansion of the figures of 1890 as compared to 1880, rendering this whole table of manufactures nothing but statistical rubbish, unless it is reviewed with some sense of the fitness of things and some capacity of ascertaining what the true facts are on which mere figures so greatly mislead. It may be remarked that this table had been completed before Commissioner Wright took charge.

It will be remarked that this treatment of census and other government data has a pretty close connection with the subject under consideration. In the compilation of the census, "meat packing," "flour mill products," and other conversions of the crude products of the field into the secondary products for distribution, are listed as "manufactures," but in the statistics of exports they are listed only as "products of agriculture." If census rules were applied to the analysis of our exports, it would at once appear that more than one-half our total export has long consisted of manufactures. In point of fact the census data are the ones to be distrusted, useful only when completely analyzed and separated under sub-titles. Yours very truly,

EDWARD ATKINSON.

Boston, May 18.

A BRITISH BICYCLE BOOM.

While the so-called bicycle craze has had important effects in a business sense, and has resulted in the development of an important manufacturing industry in the United States, it has not, as yet, been the object of a speculative "boom" in the shares of bicycle companies. The industry here has been developed by private enterprises or corporations which partake of the nature of private firms. In England, on the other hand, where the wheel is even more of an institution than it has become in this country, the process of making patents for bicycles and tires the basis of joint-stock corporations and instituting speculative activity in their shares has attained great headway, and is at present a feature of great importance in some of the British local stock markets. Comparatively little has been heard of this movement on our side of the ocean. It is partly obscured by the greater prominence given to the "Kaffir" and Westralian gold-mining "booms," while the fact that the principal exhibitions of the tendency in question are confined to the cities of Birmingham and Dublin rather than to the London Stock Exchange makes it less conspicuous.

For about three years, however, a certain portion of the British investing and speculative public have been indulging in a spirited and somewhat reckless movement in cycle shares. It began about 1893, and Dublin was the chief field for the activity of the promoters and stockjobbers in this kind of values. A number of the most prominent cycle or tire manufactories were converted into joint-stock companies on the familiar plan, and some remarkable advances were recorded in the shares. In one instance the £1 shares of a company in high repute—the Seddons—sold up to £11 each, the company having brought out two subsidiary concerns—one for France and the other for the remainder of the continent. Then the familiar process of amalgamating the parent and the children was carried out, but in the end the shares sold down to about 10s. each, and a winding up ensued. Some remarkable stories of the profits which accrued to the fortunate holders of the original pneumatic tire company, and the large dividends paid by many of the companies, served, however, to offset such unfavorable examples, and the "boom" has at last taken possession of Birmingham, which city is naturally one of the chief seats of the bicycle manufacturing industry in the United Kingdom. This has been followed by increasing interest in the speculation, the condition of which is examined at some length in the last number of the London *Statist*. That journal says:

"In market movements the effects of both sentiment and position have to be considered. Early this year there was, as regards cycle shares, no sentiment, except that on any trifling improvement people were rather disposed to effect realizations in some of the older group of Dublin promotions; but with the bona-fide activity in the industry itself, and not a little share manipulation in certain directions, the market began to broaden, and the position became one of all anxious to buy and no appearance of anyone desirous to sell. With the successive rises in prices speculation rapidly expanded, and it is to be gathered from the above remarks that there has lately been much uninformed buying on mere sentiment. The shares of the Beeston Tyre Company were virtually unsalable at the beginning of the year, commanding a price of under 2s.; this month the quotation has been up to very nearly £8. Coventry Machinist shares commenced the year at a quotation of about 5, and have since been up to 13¼; Cycle Components, from about 12s., have risen to 85s.; Humber shares, from under £1, improved to about 32s. 6d.; Rudge-Whitworth, from 8s. or 9s., have risen to 22s. Jointless Rims have considerably more than doubled in quotation, and Pneumatic Tyres more than trebled in price, within three months. Even the Cottam promotion Grappler shares sailed up from about shillings to pounds, rising to over 3½, and falling in an hour from 2¾ to 1 on discovery that the company was not to be taken into the pneumatic fold."

The same paper also speaks of a huge combination, with a nominal capital of £5,000,000, now in process of formation, and, excluding this, gives the following figures as the nominal registrations of companies more or less directly connected with the manufacture of bicycles:

	Number of companies.	*Nominal capital.*
1893	47	£1,960,000
1894	31	1,280,000
1895	51	3,180,000
1896, to April 30	27	1,540,000

EDITORIAL NOTES.

Mr. John M. B. Sill, United States minister to Corea, has reported to the State Department that a concession to build, operate and maintain a railroad between Seoul, the capital, and Chemulpo, its seaport, has been granted James R. Morse for an American syndicate. Mr. Sill says the Japanese government put no difficulties in the way of the scheme, and, through its Foreign Office, indicated to Mr. Morse's friends its willingness that the concession fall to an American syndicate.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

In store May 16, 1896.	*Wheat.*	*Indian corn.*	*Oats.*	*Barley.*	*Rye.*

CURRENT BUSINESS NEWS.

Industrial.

A Duluth dispatch says: "Never in the history of the Lake Superior iron trade has there been so great a buying movement in ore. There has been sold to furnace men and steel interests over 5,000,000 tons ore in the past two months, and nearly all of this has been placed for vessels. This means a business of not less than $27,000,000."

The Amalgamated Association of Iron and Steel Workers began its twenty-first annual session in Detroit this week.

The Pennsylvania Railroad offers a prize of an annual pass to the farmer along each of its divisions whose farm presents the best appearance. The *American Agriculturist* says: "The railroad wants to encourage farmers along its right of way to keep their property neat and attractive."

All the weavers of the Hargraves & Parker Mills, at Fall River, have struck work, in accordance with a vote passed last week. The cause of the trouble is given as "general dissatisfaction with prices paid for weaving."

A shipment of 500 tons of light steel rails was recently made to Japan from the Milwaukee works of the Illinois Steel Company. The rails were sent by lake to Buffalo, there transferred to cars for New York and then loaded on a steamer for Japan.

The *Iron Age* says: "Hamilton Smith, a mining expert, representing the Rothschilds, has gone this week to Montana to inspect the Anaconda copper mine, with authority, it is said, to purchase 300,000 more shares in the property. With the 200,000 shares recently purchased by the Rothschilds, the house will possess one-half of the stock. This control of the Anaconda stock, combined with the Rothschilds' copper interests in Spain and Chili, will enable them to virtually control the copper market."

The second day's session of the convention of the Amalgamated Association of Iron and Steel Workers opened at Detroit May 20 with an attendance of 200. The entire day was devoted to matter brought up by the representatives, largely pertaining to their particular unions and to proposed changes in the constitution and by-laws. The only thing on which nearly the whole work of the convention hangs, the wage scale, has been completed by the committee in Pittsburgh. The delegates will, it is said, instruct the conference committee to accept no reduction in the 1895-96 scale. As far as can be learned, there will be a slight advance in two departments.

The world is said by the Philadelphia *Press* to be "on the edge of a great expansion in its gold product. The chloride process has made available gold fields which hitherto could not be worked at a profit. Utah and other western states are about to duplicate the output of the African Rand. Georgia and North Carolina mines are likely to be worked on a great scale by the new method. The great gold belt of Cuba and Hayti and Central America, with the Cuyuni river region, is another group of gold-bearing lands which have yielded little in the past, but are likely to begin supplying gold in the near future."

The contract for the superstructure of the new steel arch bridge, which is to replace the present railway suspension bridge across the Niagara river, has been awarded to Pennsylvania Steel Company, of Steelton, Pa. "The amount of the contract is in the neighborhood of half a million dollars."

The Secretary of the Navy has divided the contract for the armor for the battle ships Kearsarge and Kentucky between the Carnegie and Bethlehem steel companies on the basis of the separate bids.

Commercial.

According to the report of the commissioner of agriculture and labor for North Dakota, it costs about 58c. to raise a bushel of wheat in that state. This figure is reached after compiling returns from representative growers with an aggregate acreage of 125,000 acres in 1893. The results are computed separately for the wheat sown and harvested by the use of drills and binders 56.2c., broadcast and binders 57.3c., drills and headers 86.4c., and broadcast and headers 69.2c. The figures are said to presumably include cost of seed, labor, rental or interest on land, use of machinery, etc.

The *Chattanooga Tradesman* says: "The outlook for cotton indicates that the crop will be a very large one, and will be early on the market. Speculation is active. In cotton manufacturing there is a disposition to reduce production to meet the lessened demand. Several large mills have shut down and half time operating is being tried."

The New York *Post* says the Georgic is the largest ocean freight steamer, having a capacity of 440,000 bushels. Several others have 375,000 capacity. It speaks of the great improvements in producing and handling grain; the great decrease in production in the United Kingdom, also that the increase in propulation has been offset by an increase in production in 1876 of 1,440,000,000 bushels in the world's wheat crop to 2,600,000,000 bushels. Thirty years ago lake and rail rates from Chicago to New York were 30c., now they are 7c., and all-rail has gone from 42c. to 12c. Ocean freights have declined from 30c. to as low as 1c.

The twenty-fifth annual meeting of the American Fisheries Society, which is composed of the fisheries commissioners of the various states, was held this week in New York city. H. W. Whitaker, of Detroit, was elected president, and Dr. B. W. James, of Philadelphia, vice-president.

The May returns of the statistical division of the Department of Agriculture on the condition of winter wheat show an increase of 5.6 points above the April average, being 82 7, against 77.1 last month, and 82.9 in May, 1895.

Kansas is counting on a wheat crop this year of 88,000,000 bushels, which would be the biggest yield in the history of the state.

The anthracite coal trade is now dull. There is still a large quantity of coal being moved from New York harbor to the eastern distributing ports, but the tonnage now being shipped is largely on sales made and orders booked prior to the last advance. But little coal has been sold at the May circular.

Special reports to the Agricultural Department show crop prospects excellent in Great Britain and France, good in Russia and Austria-Hungary, fair in Germany, Italy and Roumania, and unfavorable only in Spain.

The May circular of Hugh F. Fox, New York, says that even under the most favorable conditions the yield of hops in New York and on the Pacific coast "will be fully one-third less than last year." The growing plant "is not receiving the usual careful attention in the matter of cultivation, fertilizing and the use of preventive methods, and is therefore peculiarly susceptible to disease."

The proportion of spring plowing accomplished by May 1 this season was rather above the average, 79.6 per cent., or 1.9 points above that of an average year.

The cold storage business is taking on large proportions. Its development in the principal cities of the country has been phenomenal of late. Cold storage warehouses are even being erected at country shipping points. In some cases they are put up by farmers, who organize coöperative stock companies.

The Agricultural Department issued a cotton crop report last week which indicated a yield of 10,000,000 bales, or the largest crop on record; but instead of falling in price, cotton advanced ⅛c. a pound. "In other words," says the Philadelphia *Press*, "these official statistics had no effect on the market price because they are not deemed trustworthy."

The action of the directors of the Chicago Board of Trade in making the Armour elevators "irregular" does not affect the visible supply figures. They are still "regular" warehouses under the state law, and "the inspection department reports their stocks just as it reports stocks of the Seaverns and Harper houses, which were made 'irregular' by the Board of Trade authorities last July."

The condition of winter rye on May 1 was 87.7 per cent.; of barley, 89.2; spring pasture, 93.2; meadows, 91.8.

A sale of 200,000 gallons of wine was lately made at San Francisco by three firms at the head of the valley, at an average price of 20c. a gallon—the highest price paid for young wine in the last six years.

The *American Agriculturist* says "the onion trade with foreign countries is not altogether a one-sided affair, although too much so. Low prices enabled American exporters to ship 11,000 bushels in March, compared with only 3,000 bushels a year ago, and exports for nine months are respectively 68,500 bushels and 45,000 bushels. To offset this are the liberal imports from Bermuda and Egypt.

Financial.

The following securities were sold at auction this week at New York:

100	Shares American Surety Company, $100 each	225
25	Shares Dry Dock, East Broadway & Battery Railroad Company, $100 each	171
$925,000	Syracuse Street Railroad Company 5 per cent. 1st mortgage gold bonds dated July 1, 1893, due July 1, 1923 (hypothecated)	$284,425
30	Shares Murray Hill Bank, $50 each	150
15	Shares New York Life Insurance and Trust Company, $100 each	1,013
100	Shares National Bank of Commerce, $100 each	204⅝
75	Shares Commonwealth Insurance Co., $100 each	85
$3,000	Belleville & Newark Horse Railroad Company 7 per cent. bonds, due June, 1900, coupons June and December	112
10	Shares Broadway Insurance Company, $25 each	115
28	Shares Phenix Fire Insurance Company of Brooklyn, $50 each	136
7	Shares Niagara Fire Insurance Co., $50 each	134½
12	Shares New York Floating Dry Dock Company, $50 each	35
15	Shares New York Rubber Company, $100 each	120
13	Shares Consolidated Fruit Jar Co., $100 each	81
3	Shares Chemical National Bank, $100 each	4,025
$10,000	Nebraska Loan and Trust Company 8 per cent. debenture, "Series 4," due June, 1898, interest June and December	76½
2	Shares East River National Bank, $25 each	136
1	Share Fourth National Bank, $100	180
2	Shares American Exchange National Bank, $100 each	169½
5	Shares Merchants' Exchange National Bank, $50 each	114
2	Shares Broadway Fire Insurance Co., $25 each	115½
1	Shares United States Fire Insurance Company, $25 each	110
2	Shares Capital Traction Company of Washington, D. C., $100 each	73
1	Share Cincinnati, Hamilton & Dayton Railroad preferred, $100	90
2	Shares Cincinnati, Hamilton & Dayton Railroad common, $100 each	43½
$2,000	Tenth and Twenty-third Street Ferry Company 1st mortgage 5 per cent. gold bonds, due 1919, coupons June and December	94¾
$5,000	St. Paul Gas Light Company general mortgage 5 per cent. gold bonds, due 1944, coupons March and September	80¼
15	Shares Tenth and Twenty-third Street Ferry Company, $100 each	73
50	Shares New York Life Insurance and Trust Company, $100 each	1,014
25	Shares Tenth and Twenty-Third Street Ferry Company, $100 each	76
40	Shares Trademen's National Bank, $40 each	94¼
10	Shares Boston & New York Air Line Railroad (New York, New Haven & Hartford System), $100 each	10
17	Shares Brooklyn Bank, $50 each	158
10	Shares United States Trust Company, $100 each	1,085
$11,000	City of Tacoma, Wash., 6 per cent. funding bonds, due April 15, 1911, interest April and October 15	106
262	Shares French Mirror Plate Company of New York, $10 each	12½–12¾
750	Shares The American Double Pick Fabrics Company (hypothecated), $100 each	15
5	Shares American Exchange National Bank, $100 each	170

The National Lead Company has declared a quarterly dividend of 1¾ per cent. on its preferred stock, payable June 15.

Railroads.

Notice was posted on the Produce Exchange on Monday of the refusal of the freight department of the Trunk Line Association to accede to the request of the members of the flour trade for certain changes in the rules regarding storage and delivery of flour.

A new railroad, to be known as the Duluth & Great Northern, is to be built from Duluth to the Missouri, in North Dakota. The road will tap the best part of the wheat fields in northern Minnesota and Dakota.

The Philadelphia *Press* says that the Pennsylvania Railroad Company is only awaiting better times to begin extensive improvements on the property. The work will involve a large outlay and will consist mostly of new lines and branch roads to the coal regions.

Suits against John W. Reinhart, ex-president, and John A. Hanley, ex-traffic manager of the Atchison Railroad Company, came up before Judge Grosscup in Chicago on Monday for alleged violation of the Interstate Commerce law. They were postponed until Thursday next. The ex-officials are accused of having granted rebates to certain favored patrons of the road in 1892.

At public auction in Hartford, Ct., the Meriden, Waterbury & Connecticut River Railroad was sold to A. Heaton Robertson, of New Haven, for $180,000, under a decree of foreclosure granted to the trustees for the mortgage bondholders. The bond issue is $400,000, owned by the New England Railroad Company, which purchased the bonds below par.

A new fast passenger service, to be known as the "Black Diamond Express," and to be run daily except Sunday between New York and Buffalo, was begun on Monday. East-bound and west-bound trains will leave either terminal at 12 o'clock noon each day, and are scheduled to arrive at destination at 10 o'clock P. M.

Notice has been issued by the Lake Shore Railroad passenger department that no charge will be made for the transportation of bicycles in use, when accompanied by persons traveling on first-class tickets.

The Michigan Peninsular Car Company has declared a dividend of 1 per cent. on its preferred stock, payable May 27.

The all-rail east-bound shipments of dead freight from Chicago last week were 50,797 tons, against 64,446 tons the previous week and 40,323 tons the corresponding week of the previous year.

The Wisconsin Central yesterday gave notice that it would withdraw from the agreement of the western lines to charge for the transportation of bicycles, and it will now carry wheels free. This practically means that all the western roads will join in the break, and wheels will be transported without charge in order to meet the action of the Wisconsin Central.

The Supreme Court of the United States has decided that the Illinois state law requiring all railway trains to be stopped at county seats was unconstitutional and void so far as it applied to the Chicago & New Orleans fast mail train on the Illinois Central and the city of Cairo.

The test suits brought by the Grain Dealers' Association of Iowa against the railroads in that state to recover about $1,000,000 alleged overcharges on grain shipments to Chicago were filed in the Federal Court at Sioux City last Saturday.

The Ohio River Railroad Company reports for the year ending December 31:

	1895.	1894.	*Changes.*	
Gross earnings	$887,271	$712,431	Inc.	$174,840
Oper. expenses	567,728	435,468	Inc.	132,200
Net earnings	$319,543	$276,963	Inc.	$42,580

Fixed charges were $300,012, leaving a surplus for the year of $19,531; and making the total surplus of income account $234,745. The balance sheet shows current liabilities of $385,507, of which $225,000 is for bills payable.

Foreign.

A dispatch from Pueblo, Mex., says that President Diaz has promulgated an order removing the duty on corn at the port of Vera Cruz in order that 600,000 pounds of that grain may be imported for distribution in the drouth-stricken sections of neighboring states. The greater portion of the grain will come from the United States, and will be sold to the poor at cost price.

A Russian company has obtained a grant to work for gold in Corea for twenty-five years.

The United States consul in Honduras reports that the Congress of Honduras has passed an act granting to New York capitalists a concession for building an interoceanic railroad from Puerto Cortes to Amapala. Before carrying out the concession the company will have to consolidate the foreign debt and make an arrangement with the holders of the former concessions for the same road.

The accumulation of money belonging to Japan which is now in the Bank of England amounts to £15,000,000.

Dispatches to the St. Petersburgh *Novoe Vremya* from Vladivostock state that the Russians are preparing to leave Corea. First, however, they propose to restore the king to power under a strong guard disciplined by Russians.

Hungarian wheat flour is getting a foothold in South Africa, large quantities being recently shipped from the Austrian seaport of Fiume. Exports of flour from the United States to all of Africa were 14,757 barrels in 1895, compared with 19,015 barrels in 1894, and 15,766 barrels in 1893.

United States Consul-General Crittenden, of the City of Mexico, has reported to the State Department that an amendment to the Mexican constitution has been adopted prohibiting any interstate tax on commerce, to take effect on July 1. This tax, which has been in existence for many years, has been a source of much embarrassment to the home and foreign trade of Mexico.

At a meeting of manufacturers in Toronto on Tuesday, under the auspices of the Canadian Industrial League, resolutions were passed to the effect that the protective policy of the Conservative party must be maintained.

The Adelaide Milling Company, Australia, say "the official report of the harvests of New Zealand and Victoria shows different results to those anticipated. We estimated that Victoria would have sufficient wheat for her own requirement, whereas it now appears that 50,000 tons will have to be imported. New Zealand was credited with 70,000 tons for export, and this is now reduced to 40,000 tons." The total requirement of the colonies, therefore, on January 1 last was for the following twelve months 222,000 tons, which is provided for by South Australia, 85,000 tons; New Zealand, 40,000 tons; California shipments arrived and to arrive, 65,000 tons; in all 190,000 tons, showing a deficiency of 32,000 tons, which "can be more than supplied from the Australian 1896–97 crop, which begins to come to market in Queensland in October and in New South Wales, Victoria and South Australia in November."

A dispatch to Paris *Figaro*, from Havre, says considerable excitement has been caused by the action of the American consul in preventing the shipment of a cargo of cattle to the United States. "The action of the American consul is based on the tariff act of August, 1894, which included a prohibition on the importation of neat cattle and their hides from any foreign country into the United States. This prohibition was authorized to be suspended in cases of countries known to be free from contagious cattle diseases."

The German Bundesrath has accepted the government's bill increasing the bounties on sugar as amended in the Reichstag.

Domestic exports of oats are larger than any previous season. It is rumored the French government will soon reduce or remove the import duty on oats.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

Constitutional Law—Redemption.

The Supreme Court of the United States has reversed a decision of the Supreme Court of Kansas holding a law of the state relating to the redemption of property sold under execution applicable to sales made prior to its passage, on the ground that it violated the constitutional provision that no state shall make a law in violation of contracts.

Homestead—Additional Entry.

The question was involved in the case of Webster vs. Luther et al., decided this week by the United States Supreme Court, whether or not a homesteader under the law of 1862, who had made an additional entry of land under a subsequent law, could dispose of that additional entry as of other property. The court held that it was the intention of Congress to give the additional land outright to the homesteader for him to dispose of as he pleased.

Alien Contract Labor Law Construed.

The Supreme Court of the United States held, in the recent case of The United States vs. Laws, that a contract made with an alien in a foreign country to come to this country as a chemist on a sugar plantation in Louisiana, in pursuance of which contract such alien did come to this country and was employed on a sugar plantation in Louisiana, and his expenses paid by the defendant, was not a contract to perform labor or service as prohibited in the alien contract labor laws.

Patent—Name—Designation.

The Supreme Court of the United States held, in the recent case of The Singer Manufacturing Company vs. The June Manufacturing Company et al., that where under the life of a patent a name became the generic designation of the thing made at the end of the life of the patent, the name, with the article patented, became the property of the public, and its use could not be restrained by injunction. The court further held, however, that the right did not exist to use the name indiscriminately or without qualification, so that the public would be deceived by its use into the belief that the thing manufactured was different from what it really was, or that it was made by a person or corporation other than the real maker.

Constitutional Law—Civil Rights.

The Supreme Court of the United States has upheld, in the case of Plessy vs. Ferguson, the constitutionality of the law of Louisiana requiring the railroads of the state to provide separate cars for white and colored passengers. The road involved in the case was wholly within the limits of the state, so that no question of interstate commerce was involved. The court said that by analogy to the laws of Congress and of many of the states requiring the establishment of separate schools for children of the two races and other similar laws, the statute in question was within the competency of the Louisiana legislature, exercising the police power of the state.

Lien—Logging—Cooking.

The Supreme Court of Minnesota held, in the recent case of Breault vs. Archambault et al., that under the provisions of the log lien law, General Statutes 1894, sections 2451 to 2464 inclusive, a cook and his assistant employed at a logging camp for the purpose of cooking for the men actually and directly engaged in cutting, hauling and banking logs, are entitled to liens upon such logs for the amount due for such services; that a blacksmith employed at such camp in shoeing the horses, in repairing the sleds, and in mending and keeping in order tools used by the men actually and directly engaged in the common enterprise, is also entitled to a lien upon the logs, and that the manual labor for which a lien is given under section 2451 is not merely the personal labor of a lien claimant, but includes labor performed by his teams and servant under a contract for a gross price per month for both.

Insolvency—Preference—Creditors.

The Kentucky Court of Appeals held, in the recent case of Traders' Deposit Bank vs. Hoffman, that where it is sought to have an act of preference committed by an insolvent debtor declared to operate as an assignment under the statute, both the debtor and the preferred creditor are necessary parties to the action; that it is not sufficient that the petition in such an action be filed within six months after the act complained of; that the action must be commenced within that time, as required under section 39 of the Civil Code, and it is not commenced until a summons is issued or a warning order is made, nor is it commenced by the issuing of a summons against a defendant who is known by the plaintiff to be a non-resident, a warning order being the process provided for bringing non-residents before the court; that although the action was commenced as to the debtor within six months, yet as no warning order was taken within that time against the preferred creditor, who was known to be a non-resident, the action was properly dismissed, and that the issuing of summons against the non-resident defendant within six months was not sufficient.

Bank—Insolvency—Fraud—Deposit.

The Supreme Court of Indiana held, in the recent case of The State vs. Beach, that it is sufficient to charge the crime of fraudulently receiving a deposit in a bank after it has become insolvent, by using language of the statute, without setting out the facts constituting the alleged fraud; that the law providing that the failure or suspension of a bank within thirty days after receiving a deposit shall be prima facie evidence of an intent to defraud on the part of its officers in receiving the deposit is constitutional; that the failure of the bank from insolvency shortly after the receipt of the deposit and before it has been withdrawn by the depositor renders it "lost to the depositor" within the meaning of the law; that a bank cannot apply the amount of a deposit to the discharge of an unmatured note of the depositor held by it; that a depositor is not "indebted to the bank" within the meaning of this statute unless it be indebtedness upon which the bank has a right to apply the deposit, and that the proceedings and orders of court in settling his business under the voluntary assignment law are competent evidence to prove the insolvency of a banker who made an assignment within two days after receiving a deposit.

Railroad—State Regulations Invalid.

The Supreme Court of the United States rendered a decision this week in favor of the Illinois Central Railroad Company in a controversy with the state involving the validity of a state law requiring every railroad passenger train to stop at county seats within the state. It appears that the railroad company operates a line of road from Chicago to New Orleans, which passes Cairo at a point three and one-half miles distant from the station in that city. Six of the passenger trains on the road are run on a switch or a side track from the main line to the station in the city, but the fast mail train between Chicago and New Orleans, run under special contract with the Post Office Department, and on a schedule fixed by the officials of the latter, doesn't go into the city of Cairo. Proceedings were begun on the relation of the state to compel the railroad company to run the train into the city under the provisions of the county seat law, and the Supreme Court of the state decided that it must do so. The company appealed to the Supreme Court of the United States, which held that the company need not run the mail train into Cairo, saying that, so far as the state law sought to compel the railroad company to make this unnecessary trip of seven miles by a through mail train, it was unconstitutional and void.

Corporation—Subscriber—Notice.

The Kentucky Court of Appeals held, in the recent case of Oil City Land & Improvement Company vs. Porter, that a subscriber for shares in a corporation must at his peril inform himself with regard to the provisions of its charter or of its articles of incorporation; that, therefore, where at the time a subscriber executed his notes for the amount of his subscription the company had been regularly incorporated, he was chargeable with notice of a provision in the articles of incorporation authorizing the company "to subscribe for stock in other companies or corporations," and could not escape liability upon the ground that at the time he verbally agreed, prior to the incorporation of the company, to make the subscription, the fact was concealed from him that it was contemplated that the proposed corporation should subscribe for one thousand shares of the stock of another corporation, which subscription was afterward made, there being nothing to show that the person who solicited his subscription was then the agent of any of the promoters of the corporation, or that any of the promoters or other subscribers knew that any concealment had been made, and that the fact that his name was, without his knowledge or authority, signed to a subscription paper setting out the fact that the proposed corporation was to take the one thousand shares of the stock of another corporation, did not affect the question of his liability, which existed by reason of the execution of the notes, whereby he actually subscribed for the stock he had prior to that time verbally agreed to take.

BUSINESS NOTES.

Utilizing Electricity.

The Philadelphia *Press* says: "Electricity is making great strides commercially in this country as well as in England and Europe. Not the least interesting form of its adaptation to every-day practical uses is the horseless carriage. France seems to have led the use of this vehicle, using, however, other power than electricity, but it is now announced that the London Electric Omnibus Company will soon place 125 horseless vehicles on the streets. It is doubtful whether the trolley system of transportation in great cities can be surpassed, but London could not be expected to do without omnibuses."

Traffic Between Denmark and Greenland.

The *Danish Export Review* says: "The commercial traffic between Denmark and Greenland is at present carried on by means of 9 sailing vessels with a register tonnage of from 150 to 317. The vessels are specially constructed and rigged out for this trade. One of them, having also steam power, makes three voyages, the others one or two every year. Taking an average of five years, we shall here give a list of the annual imports to Denmark from Greenland:

Seal oil, barrels	9,318
Kreporkak oil, cod oil and other sorts of train oil, barrels	241
Seal skins, pieces	27,355
Fox skins, blue, pieces	1,307
Fox skins, white, pieces	1,024
Icebear skins, pieces	62
Cleaned eiderdowns, pounds	212
Feathers, pounds	12,318
Narwhale horns, pounds	283

Spain's Wheat Crop.

Coming immediately upon the severe drain of resources caused by the Cuban rebellion, the Spanish people have now to face the prospect of an almost total loss of the wheat crop, caused by drouth and insects, says a Washington dispatch. United States Consul Burke, at Malaga, writes to the State Department that a new insect pest, as destructive to wheat as the phylloxera is to the grape, has ravaged the crops in several provinces, while, owing to a severe drouth, not only will the entire wheat crop be a total failure, but there will be a shortage of every other crop of grain. The poor are suffering much, and unless the rain comes the wine and fruit crops will become a total loss and great suffering and want will prevail throughout the whole country. Efforts will be made to have the government reduce or remove the import grain duties, as heavy imports must be made during the current year.

Recent Arbitration on Labor Disputes.

The New York correspondent of the Philadelphia *Ledger* writes: "Bishop Potter has, by a recent decision, while serving as an arbitrator of differences between employers and their men, endeared himself to the workingmen by deciding in their favor on the broadest grounds of humanity and not on the technicalities of the dispute. And now Rev. Dr. Rainsford, following the lead of the bishop, makes an address to several thousand bakers, constituting the International Journeymen Bakers' Union. He praised trades unions, congratulated the bakers on the passage of the bill compelling the inspection of bakeshops in order to put them in sanitary condition, and then he said that in 1897 the bakers would have to vote for a new city administration. He said that the Democratic party did not 'care a fig' for laboring men as laboring men, neither did the Republican party. He advised workingmen not to be 'led by the nose,' but to vote for true men, whom they could trust. They would then have a better city."

Foreign Adulterated Butter.

In a communication from the British Board of Agriculture, a return is made of samples of imported butter analyzed under the direction of the board from May, 1895, to February, 1896, inclusive. The total number of samples so analyzed was 995, representing the products of twelve different countries. The countries in whose products adulterated specimens were found are as follows: Belgium, 5 samples, 1 adulterated; Denmark, 182 samples, 8 adulterated; Germany, 154 samples, 43 adulterated; Holland, 250 samples, 66 adulterated; Norway and Sweden, 109 samples, 2 adulterated; Russia, 49 samples, 5 adulterated. The countries contributing samples among which no adulterated specimens were found are: Argentina, 4 samples; Austria, 57; Canada, 39; France, 62; New Zealand, 21; United States, 63 samples. In regard to the adulterated products the noteworthy points are the tremendous proportion of specimens, more than 34 per cent., from Germany; the large proportion, numbering more than 25 per cent., contributed from Holland, and the fact that Denmark, by far the largest contributor of foreign butter products to the British market, and enjoying hitherto an almost irreproachable reputation in the butter market, contributed on a total of 182 specimens, 8 adulterated, or nearly 5 per cent. In regard to the other countries, the presence of Argentina in the British butter market, even though no doubt to a limited extent, is worthy of note."

Boots and Shoes Active.

Reports to the *Shoe and Leather Reporter* from Boston are of unwonted activity. The factories are all in operation—most of them to the fullest capacity and a large number with contracts which will keep them occupied for three months. There are a great many sizing-up orders as well as duplicates of early purchases. The mails are bringing in new orders every day, the quantities ranging from 20 to 1,000 cases. The southern jobbers apparently have been doing a good business, as they are steadily adding to their purchases. Dealers in the west and in the east are buying more. Great quantities of colored shoes have been sold and buyers are urgent for deliveries, so that they may get them in the season for them. Many shoes for fall wear, bought for future delivery, have been called for to meet the demand. The enhanced cost of material is a matter of some concern to the manufacturers, because of the exceedingly low prices at which they have taken orders. To the extent to which they are unprovided with leather the shoes they have sold will cost, as the market now stands, 2½c. a pair more than they did a little while ago.

Bearish Wheat Views.

The *Evening Corn Trade List* (Beerbohm's), London, says: "A perusal of the crop accounts from the various countries, summarized in our preceding remarks, does not convey the impression that crop prospects are brilliant in any country, except, perhaps, France and England, and in these countries the most critical periods have yet to be traversed. Nevertheless, in spite of continually diminishing stocks and of a small quantity afloat, there is a general weakness in the trade, which is somewhat difficult to account for. It is a fact that stocks in first and second hands in the United Kingdom have not been so small as they now are for many years, the total English 'visible' being about 2,500,000 quarters less than last year, and 1,000,000 quarters below the total at this time in any of the past ten years. The reduced consumption of wheat, owing to the mild winter and the abundance and cheapness of vegetables and meat, has had much to do with the unsatisfactory winter's trading, but its influence ought to be now on the wane. We come, therefore, to the peculiar conditions in France as being the probable cause of the present indisposition to enter into contracts for future shipment. France is entirely self-supporting, and if the growing crop fulfills its present promise, the question will arise, 'What will France do with her surplus?' Much, therefore, depends upon the outturn of the French crop, and in the meantime buyers seem content to await the development of events."

Ottoman Public Debt.

The London *Westminster Gazette* says: "The preliminary report of the Council of Administration of the Ottoman public debt for 1895–96 has just come to hand, and shows that the total net receipts in cash amounted to £T.2,137,137, as against £T.2,196,318 in 1894–95, a net decrease of £T.59,000, or 2.76 per cent. This is not, says Mr. Vincent Caillard, a large percentage of decrease to deplore; it is scarcely, however, an accurate manner of viewing the real results obtained, since a certain proportion of the revenue is fixed, and the variations should be considered in relation only to the variable revenues. These are the 'Five Indirect Contributions,' the tobacco tithe, the share in the profits of the tobacco regie, and the partial repayments of advances formerly made by us to that administration in respect of losses on the Reftieh duty on tobacco exported to Egypt. The total receipts under these heads amounted in 1895–96 to £T.1,239,977, against £T.1,293,684 in 1894–95, the net diminution of receipts arising out of variable revenues, thus turning out to be £T.53,707, or 4.15 per cent. Referring to the disorders in the Eastern provinces and the unnecessary alarm of the bondholders, Mr. Caillard gives the passage from the council of foreign bondholders' communication in November last, showing that, if not one piastre of revenue were collected from the disordered provinces, the service of the debt would, as to interest, not suffer at all, and as to sinking fund only slightly. The 'Five Indirect Contributions' in the first half year showed an increase of £T.18,700 on the corresponding half year of 1894–95, but in the second half year this increase was turned into a decrease of upwards of £T.52,000, owing, in the main, to the calamities alluded to."

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The reactionary tendency in prices, shrinkage in railroad earnings, the falling off in bank clearings, and the fact that the present constitutes the beginning of the between-seasons period, include the more conspicuous features of the general business situation. On the other hand, business failures have fallen off sharply.

Gross and net railway earnings for the first quarter of 1896 are satisfactory, showing totals enlarged beyond those of last year in all but one group—the coalers. Total earnings of 132 companies, having about two-thirds of the total mileage of the country, are $177,070,325, a gain over last year of 7 per cent., while net earnings aggregate $51,732,022, an increase of 9.8 per cent., following gains of respectively 1.6 and 3.5 per cent. in the first quarter of 1895 over 1894. The best relative showing is that by the grangers, which increased 17.8 per cent. in gross and 22.8 per cent. in net over a year ago. Other large gains in net are by the southwestern roads, 25 per cent.; Pacifics, 17 per cent., and the southern roads, 15 per cent. The coal roads report the only decrease from a year ago, 1.4 per cent. in gross and 5.5 per cent. in net. The eastern roads report 5.7 per cent. gain in gross, but only 2.9 per cent. in net, while the trunk lines show a gain of 4 per cent. in net and 4.4 per cent. in gross.

The New York stock market is stagnant, though speculative values are firmer, and bullish manipulation in industrial stocks, notably American Sugar, supplies the lack of other interest. There is no disposition to liquidate, and the market shows decreased anxiety about the political situation and its bearings on the currency. Foreign exchange is firm at 4.88¾@4.89. Gold continues to go to France and Germany, the exports for the week being $2,650,000.

Exports of wheat (flour included as wheat) from both coasts of the United States this week amount to 1,906,000 bushels, as compared with 1,903,000 bushels last week, 2,754,000 bushels in the week one year ago, 2,310,000 bushels two years ago, and 3,106,000 bushels three years ago.

The total number of business failures throughout the United States this week shows a marked falling off from the weekly average during the past four months, 216, as compared with 265 last week, 206 in the like week of 1895, 237 in the third week of May, 1894, and as compared with 247 in the corresponding week of 1893.

The most favorable report comes from Kansas City, where the movement of merchandise continues relatively quite active; mercantile collections are fair and trade prospects were never better. Improvement is also noted on the Pacific coast, due to the weather, which has rendered the crop outlook more favorable and stimulated purchases in staple lines. The boot and shoe industry is conspicuous in that demand has revived sufficiently to furnish most factories with orders for some time ahead and to stimulate quotations for hides, leather and shoes. The falling off in the movement of merchandise in Nebraska and other western states owing to prolonged rains has been offset elsewhere by improved agricultural conditions because of rains. In addition to higher prices named are those for tin and Havana tobacco, the latter due to action taken by the Spanish captain-general in Cuba looking to prohibiting exports of tobacco from the island.

There is no improvement in demand for or price of wool, and manufacturers are induced to purchase only by price concessions. Warmer weather helps retailers of dry goods, but has not continued long enough to stimulate wholesale demand. The iron and steel industries report a moderate increase in request for raw material, but not sufficient to strengthen prices or encourage makers as to an increase in the output. Jewelry manufacturing is restricted.

At the south the most encouraging report comes from Savannah, where excursions of country merchants, farmers and others have resulted in an increased volume of business among wholesalers. Georgia, South Carolina and Tennessee truck farmers complain that want of rain has injured the crops. Wholesale merchants at Galveston are not pushing business and report the demand unusually light.

General trade throughout the central west has not met anticipations. Clothing orders have dropped off two weeks earlier than usual at Chicago, and the run of orders for dry goods there is light. A relatively more favorable report comes from St. Louis that dry goods, clothing, hardware and groceries are being sold in increasing quantities for fall delivery. Detroit and Milwaukee business interests are suffering from strikes, respectively, in the building and street railway lines. Decreases in prices of staples are for wheat-flour, wheat, Indian corn, oats, lard, sugar, live hogs, petroleum and foundry pig iron. Practically unchanged quotations are reported for pork, coffee, cotton and print cloths.

On the Pacific coast the price of potatoes has doubled, owing to damage to the California crop by frost. Seattle is to ship large quantities of cedar blocks to Indianapolis, while Tacoma's shingle shipments east for four months are larger than in the corresponding period of 1895. A vessel loaded at San Francisco with wheat this week for Australia and another for South Africa.

Bank clearings aggregate $991,000,000 throughout the United States this week, a falling off of 2.7 per cent. from last week, 10.8 per cent. from the total in the third week of May, 1895, but an increase of 16 per cent. as compared with the corresponding total in 1894, and a decrease of 5 per cent. contrasted with the corresponding total in 1893.

Toronto reports a small sorting-up demand in general lines, with travelers just starting out to sell winter goods. Montreal wholesale merchants report business as fair only, with no new features. Pending elections induce uncertainty. A better demand for staples is reported from Quebec city, but rain is needed in the lumber districts in order to get the logs to the mills. Bank clearings at Winnipeg, Hamilton, Montreal, Toronto and Halifax aggregate $19,821,000, compared with $20,629,000 a week ago, as contrasted with $19,721,000 in the third week of May last year, and with $13,990,000 in the like week two years ago. The total number of business failures reported from the Canadian Dominion this week is 28, this compared with 34 last week, 25 in the week a year ago, and 29 two years ago.

FINANCIAL.

The Money Market.

There is but little to record in connection with the present action of the New York loan market. The most significant circumstance, perhaps, is the indisposition of lenders to put out money on long time under the impression that the autumn may witness a period of decidedly better rates. The inquiry for time loans is limited at 3@3½ per cent. for 30 to 90 days and 3½@4½ per cent. for longer dates, the supply especially for short periods being large. Offerings of commercial paper are somewhat better as to quality, the amount of first-class names being rather limited, and rates are 4@5 per cent. for endorsed bills receivable. Call money has ranged between 1½@3 per cent., the bulk of the renewals being at 2½ per cent.

The New York Banks.

The statement of averages issued by the New York Clearing House last Saturday is another exhibition of the influence of gold shipments on the bank holdings, counteracted by receipts of large amounts of money from the interior. As exhibited in the averages, the effects of these contrary movements is a decrease of less than $1,000,000 in cash holdings, while loans increased over $2,000,000, and deposits nearly $3,000,000. As the result of the other changes the surplus reserve is reduced by $1,665,000. The figures of the statement compare as follows with those of the preceding week:

	May 9, '96.	May 16, '96.	Changes.	
Loans	$474,056,700	$476,458,400	Inc.	$2,401,700
Specie	59,460,900	60,114,300	Inc.	653,400
Legal tenders	84,536,100	82,662,000	Dec.	1,874,100
Deposits	495,015,500	497,093,300	Inc.	2,977,800
Circulation	[illegible]	[illegible]	Inc.	32,000
Total reserve	143,997,000	[illegible]	Dec.	920,700
Reserve required	123,753,875	124,498,325	Inc.	744,450
Surplus reserve	20,243,125	18,577,975	Dec.	1,665,150

At the corresponding period last year the surplus reserve was $37,587,900, against $78,999,125 in 1894.

Silver.

Silver was absolutely featureless. The London quotation for bars remained unchanged all week at 31 1-16d. per ounce, and the New York commercial price varied only ⅛c. throughout. There are no features in the market worthy of attention apart from its steadiness.

Foreign Exchange.

Extremely dull conditions have ruled in exchange this week. The limited character of the supply of bills is only equaled by the rather slow inquiry, which is by no means as large as is usual at this period of the year. The chief feature in the early part of the week was the statement that the special orders for gold from Germany had been filled, the withdrawal on Monday for export by the succeeding day's steamer of $1,120,000 having, it was said, completed the amount required for the present.

The disappearance of offerings of bills by gold shippers was at once felt in the market, and demand sterling, which, under pressure of that kind, had been quoted at 4.88½, advanced by Wednesday to 4.88¾. Notwithstanding this, it was announced that $500,000 gold would be shipped to Paris by Thursday's steamer, and at the close of the week reports were again current that the German special orders for gold had been renewed, causing a little weaker tone in rates for demand sterling. It would seem that under existing circumstances there is an advantage in shipping gold to either Paris or Berlin as compared with buying bills, while exchange houses, in the unsatisfactory state of the market, are averse to going short of it by selling long sterling. On Friday $1,000,000 was engaged for export to-day, and it is understood that further amounts will go on next Tuesday. The market was generally firmer on Friday. Posted rates were unchanged all week at 4.88@4.89½.

POSTED RATES OF LEADING DRAWERS FOR LONG AND DEMAND STERLING.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.89; commercial bills, 4.87@4.87¼; francs, 5.16¼ @5.14⅜; reichsmarks, 95¼ @95$^{11}/_{16}$.

The Bank of England discount rate remains unchanged at 2 per cent. The bank this week gained £200,000 in specie, and its proportion of reserve is 58.39 per cent., against 59.08 per cent. last week. In the London open money market call loans are easier at ½@¾ per cent., after being quoted 1 per cent., and discount is also easier at $^{13}/_{16}$@⅞ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending May 15, 1896:

	1896.	1895.
Dry goods	$1,372,899	$1,607,424
General merchandise	6,701,881	7,498,676
Totals for the week	$8,074,780	$9,106,100
Previously reported	187,934,086	193,383,459
Since January 1	$196,008,866	$202,489,559

The exports (exclusive of specie) from New York to foreign ports for the week ending May 19 were $1,830,305 above those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$8,095,384	$7,525,584
Previously reported	141,959,087	130,069,107
Since January 1	$150,054,471	$137,594,691

THE STOCK MARKETS.

The New York Stock Market.

Speculation during the present week has been even narrower and more professional than before. The tone, however, has, on the whole, been steadier, and the apprehensive feeling in regard to the political results as bearing on the currency has worn itself out. Evidence, in fact, accumulates that large holders of securities have not been affected by the recent liquidating tendency, but that the latter was confined to the smaller semi-professional bulls. The exhaustion of selling from this quarter has imposed a check upon bearish activity on the part of the room traders, and the absence of any decided pressure on the market has been no less significant than the total lack of outside interest, commission houses as a class being almost idle. London has not been a factor either way. The Whitsuntide holidays throughout Europe supplement the effects of the still unsettled state of affairs in the Transvaal, and result in almost complete speculative stagnation. It is, however, significant that the position of affairs here with reference to the currency is watched by British and continental financial interests with close attention, and that some authorities are quoted as saying that the outcome is equal in importance to their markets with events in South Africa. The conclusion generally drawn is that any assurance that tends to insure the triumph of sound money and the maintenance of the gold standard in the United States would at once result in heavy foreign buying of all classes of our securities. Among the incidents of the week is the news that Mr. J. P. Morgan has placed an option for $6,500,000 of the new Northern Pacific prior lien 4 per cent. bonds with a London banking syndicate, the belief being that the securities will be taken up in the autumn. This week's gold shipments have been comparatively small, amounting to $2,650,000, and in the early part of the week it was understood that the "special orders" for gold from Germany had been filled. There seems to be some uncertainty about this, however, and the existence of a considerable inquiry for exchange would in any event tend to force rates to a level at which gold would move to London, as the record for many years past shows to be a normal proceeding at this season. The market has, however, virtually disregarded the gold movement, and has indeed been but slightly affected by the generally fair crop reports. So far as any speculative interest developed, it was mainly in connection with the manipulation of some of the industrials, Sugar in particular showing considerable weakness, only to rally and recover its ground on covering by the short interest that had accumulated in the stock. On Friday the market was decidedly strong at the close on short covering and a better feeling on the part of the room traders.

Sugar has been the principal feature, declining to 120 on Tuesday, from which point, however, it rallied to 124⅝. The same interests which took the lead in producing the advance were buyers on the improvement, which was based on renewed rumors that the declaration of an extra dividend had only been postponed and that the company had gained considerable advantages from the recent decline in raws. American Tobacco was stronger, and rose to 67¾, while the absence of a contest in the Rubber Company incited some buying of the stock.

The railroad list has been inactive, and, on the whole, featureless. The grangers, however, held firm in the face of scattered liquidation and London selling. Some attention is being paid to Reading seeurities, and the news in regard to the Northern Pacific reorganization is favorable. On Friday Manhattan was a feature, rising from 102½ to 105⅛ on the news that the decision by the courts has been adverse to the plans of the New York Rapid Transit Commission.

Boston Stock Market.

The general market has ruled quiet, but some stocks have been active. Railroads have met with little attention, but values, as a rule, have held up well, the week's business showing only a fraction of a point decline at the close. Coppers have ruled firm, with an active trade in Boston & Montana at much higher prices. Sugar has met with fair attention, but the market sold lower at the close. United States Leather has ruled quiet, but the market holds steady.

Prices of principal shares, with volume of transactions, have been as follows:

	Week ending

General Mention.

The Guaranty Trust Company of New York offers for subscription, at par and accrued interest, $1,500,000 first mortgage twenty-year 6 per cent. sinking fund gold bonds of the Johnson Company, subscription books to be closed on Wednesday, May 27, the right being reserved to reduce or reject subscriptions; allotments to be made on June 2. The Guaranty Trust Company state in their prospectus that the Johnson Company ranks among the leading companies in the United States for the production of Bessemer steel, and prints a report of Stephen Little, dated April 24 last, addressed to the Guaranty Trust Company of New York, showing that the cost of plant of the Johnson Company at Lorain, Ohio, and Johnstown, Pa., is $4,799,081, and that the earnings of the company for the last six years have been at an average of $516,650.55 gross, showing after deduction of interest the net profit to have been $476,611.32 per year. The Guaranty Trust Company further state that they have been furnished with affidavits of disinterested appraisers, certifying the present value of the manufacturing plant to exceed the cost as stated by Mr. Little. The total issue of the bonds offered is $2,000,000, the interest on which shows an amount far below the yearly income of the company. A sinking fund is provided for the annual retirement by lot of $100,000 at 105 and accrued interest, unless the company can, through advertising, purchase this amount at a less price. Bonds to the amount of $100,000 have already been retired. Early application will be made for the listing of the bonds on the New York and Philadelphia stock exchanges.

Holders of reorganization certificates for Philadelphia & Reading Railroad Company's first, second and third preference income bonds, deferred income bonds and stock, are notified that the second installment on such bonds and stock deposited under the plan is called for June 15. Reorganization certificates must be presented at the time of making such payments at the offices of J. P. Morgan & Co., New York; Drexel & Co., Philadelphia, or J. S. Morgan & Co., London, so that the same may be indorsed thereon.

TRADE FEATURES.

SMALLER VOLUME OF BUSINESS AND BANK CLEARINGS AND RESTRICTED DEMAND, BUT FEWER FAILURES AND BETTER REQUEST FOR LEATHER AND SHOES.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, May 22.—There is yet an absence of life shown in nearly all departments of the merchandise market, general conditions ruling very dull. Under the effect of a slow call for supplies values are easy, and the market is mostly in buyers' favor. Money is quiet and rather easy, and it would take but little to bring about higher rates. Mill paper is scarce at 3¾ per cent. net, while collateral loans are easily made at 4 per cent. on four to six months' time. Outside and western paper is quoted at 5 per cent. The boot and shoe market is stronger, and manufacturers are well supplied with orders at the low prices. On some of the cheaper grades of staples an advance of 2½c. is asked. Leather is firmer all along the line, and buyers are forced to pay an advance for most kinds. Hides are quiet, but the market is firm and higher. Iron and steel are quiet, but held steady, with lumber in moderate demand. Spruce is rather easier. Coal is steady.

Providence, May 22.—Manufacturers of jewelry find business quiet and collections slow. There is no improvement in the manufacture of silverware. A large and well-known concern in this line has recently taken measures to curtail output, and have laid off some of their workmen for two weeks.

Philadelphia, May 22.—There is no activity in wool, and the condition of affairs among textile manufacturers is practically unchanged. Very little doing in dry goods. Morocco and leather more steady, but demand is light. Increased sales are noted in boots and shoes, and collections better. Sales of tobacco have increased, but prices have not improved except in Havana, which steadily advances, especially since the edict prohibiting export of "Vuelta" and finer grades for wrappers from Cuba. Large factories have been providing for future wants, and have stock for months to come. Collections are slow.

Pittsburgh, May 22.—General business conditions have not changed except in the matter of collections, which are reported more difficult to make than they were two weeks ago. The banks report a good demand for money, as usual at this time of year. A better feeling is noted in the local iron market. The volume of business is much larger than in the week previous, although raw material is not what it should be. Demand for finished material is good, and prices are well maintained. The outlook is considered fair by dealers, who look for further improvement in the near future.

Baltimore, May 22.—Business is now quiet, as it is between seasons; preparations are going on for the fall trade, which, it is anticipated, will be very large. Spring business has been up to expectations and collections have been satisfactory.

West and Northwest.

Cleveland, May 22.—Unchanged conditions rule the general trade situation. Dry goods, boots, shoes and groceries are fairly active, while strictly seasonable merchandise is quiet. Iron and steel market present nothing new. Building is fairly active, and building material correspondingly so.

Cincinnati, May 22.—Business is quiet, collections difficult, money in banks easy.

Detroit, May 22.—The volume of business in most lines continues fair, except building, which is at a standstill, practically, owing to strike troubles. Collections are reported still slow.

Chicago, May 22.—There has been a light run of orders for dry goods during the week, but sales show no decided falling off. Clothing has never been so slow at this season, and orders have dropped off two weeks earlier than usual. Manufacturers are preparing to send their traveling men out for fall goods. Shoes are selling fairly, but not as good as last year. Manufacturers are buying leather more freely, and large sales of calf skins have been closed. Hides have advanced ½ to 1c. within ten days, and are 1 to 1½c. above the bottom. Packers are well placed up, having sold 20,000 hides within a week, and there is a good demand. There is a noticeable reduction in the inquiries for iron and steel, and the only encouraging feature is the fact that buyers of two months ago are furnishing specifications so that the mills are kept running. Sales of foundry pig iron have increased, as holders have reduced prices 25c. to 50c. per ton. Light hardware has sold less freely and orders are smaller. Lumber is easy, with a moderate trade. The general produce trade is only fair. Wool receipts are 2,647,639 pounds.

Louisville, May 22.—No appreciable change is noted in general business from last week, and the tone of trade continues quiet in all departments. Receipts and offerings in leaf tobacco are small, and little activity characterizes the market.

St. Louis, May 22.—Business in general shows symptoms of seasonable betterment. Orders are increasing for fall delivery of dry goods, boots and shoes, hardware and groceries. Hides continue to advance, stocks being limited and values of leather are correspondingly higher, the demand being good from manufacturers of boots and shoes and harness. Pig iron is dull, but shipments are large on old orders. Barbed wire is inactive, the season having closed. Iron and steel are quiet at former values. The demand for iron for freight cars is increasing, the tonnage taken being large. Black and galvanized sheets are quiet, with prices higher. Tin shows some improvement in sales at recent advance. Produce is plentiful at fair prices. Receipts of wool from nearby territory are small and demand good. Collections are fair.

Kansas City, May 22.—Jobbing trade still continues good and retailers are satisfied with this week's business. Collections are fair and the prospects for future trade were never better. Live-stock receipts are very liberal with low values. Hogs are selling at 3c. Some predict a 2½c. price in the near future.

Milwaukee, May 22.—The continued street railway strike and boycott has had a wide-spread and

very unfavorable effect upon trade in this city and immediate vicinity, which has been very poor, most complaints coming from retail centers. Collections continue slow.

Minneapolis, May 22.—The trade situation is changed but little from last week.

Omaha, May 22.—Heavy rains have prevailed all through the state during the past week, and trade in all lines has been quiet in consequence. Collections are up to the average.

Southern Cities.

Charleston, May 22.—There is a slight improvement in general trade. Rain is still desired very badly in lower sections of the state; have had moderate showers in the upper part.

Savannah, May 22.—Wholesale trade is dull, retail good, due to excursions of farming classes for May week. Collections are fair. Receipts and shipments of rosin and turpentine about the same, with a steady demand for each.

Atlanta, May 22.—No material change is noted in the state of trade or collections this week.

Augusta, May 22.—Business remains featureless. There was very little change during the last few weeks.

Jacksonville, May 22.— Dullness is noted in wholesale business. Collections are fair, and retail trade good, due to state encampment.

Birmingham, May 22.—There is about the usual business for the season.

Chattanooga, May 22.—Truck farmers are suffering losses for want of rain. Most factories continue busy. Collections are fair.

Memphis, May 22.—General trade shows no change during past week. Collections are fair.

New Orleans, May 22.—The volume of trade is fairly satisfactory for the season. Cotton is moving quietly but steadily. Sugar is easier and dull. There is very little dealing in rice. Local securities are well maintained.

Galveston, May 22.—Wholesale merchants are not pushing their business, and there is little demand for goods. Collections are poor.

Pacific Coast.

San Francisco, May 22.—Commercial lines are unchanged; wholesale trade continues quiet. Freights are dull. One vessel loaded with wheat cleared for Australia, another for South Africa. Lumber shipments are active, produce dull. Weather conditions are favorable for crops.

Seattle, May 22.—Trade is affected favorably by good weather. Crop reports are unfavorable, owing to frost, prunes in Clark county being decidedly bad. Orders have been received for seventy-five carloads cedar blocks for Indianapolis.

Portland, May 22.—There are no particular changes in trade conditions. Produce is dull, with the exception of old potatoes, which have doubled in value due to the shortage in California caused by frost. Retail trade has slightly improved owing to better weather. Collections are fair.

Tacoma, May 22.—Abundant rains in eastern Washington during week have increased prospects of an unusually large yield of wheat. Fruit growers in western Washington report prunes well set and apple trees a mass of bloom. Shingle shipments eastward for four months show an excess over last year. General trade is quiet. Collections slow.

Canada.

Toronto, May 22.—There is nothing new in the trade situation. In wholesale circles orders are confined to small sorting-up parcels. Travelers are showing samples of winter dry goods, but orders are restricted. There is a further decline in wheat.

Halifax, May 22.—There is no change in the condition or volume of business. Collections are poor.

Montreal, May 22.—Trade is fairly good, with but few and unimportant features. There is a feeling of uncertainty, however, which will continue until pending elections are decided. Flower, grain and provisions show continued heaviness, but in hardware, groceries and seasonable dry goods business is normal. Quebec City and district report a better demand for staples. Collections are somewhat easier, but rain is needed in the lumber districts to get logs to the mills.

Wheat and Flour Exports, by Weeks, Both Coasts.

[Special to BRADSTREET'S.]

The total quantity of wheat (flour included) exported from (any of) sixteen United States and Canadian ports for six business days ending with Thursday of this week, is reported by mail and wire (in bushels) to BRADSTREET'S as follows:

Week.	1896.	1895.	1894.	1893.	1892.
Jan. 2	3,965,731	3,142,578	3,196,400	3,008,020	5,321,500

Dry Goods.

The tone of trade is slow in nearly all departments, the only exception being in retail lines. Warmer weather has helped retailers, but it has not lasted long enough to start operations much with agents and jobbers. Cotton fabrics are yet dull, and prospects for higher prices for goods in the near future are not favorable. The cost of raw cotton is high, but until the surplus of goods made up gets worked down, this will have but little effect on the fabric market. Converters have bought largely of brown cottons of late, and this should operate against any advance on the price of these goods the coming season. Dress woolens are moving slowly with jobbers, while at first hands business is very dull. The mills are fairly employed on old orders, but new business is very disappointing. Men's-wear woolens are dull, but some little business has been picked up of late.

Wool.

The demand continues very slow, and values for most kinds are largely nominal. Manufacturers are not in need of the raw material, and to tempt them to purchase under these conditions means even lower prices. The stock of old wools held in eastern markets by dealers is large, principally of territory grades, and even at the low prices ruling they do not sell. The nominal range, scoured, for these wools is 30c. for fine, with the range down for coarser grades. Some new Wyoming wools in have sold at 30c., scoured, but buyers will take but few at this price. Fleece wools are dull at 17@18c. for XX and XX and above Ohio, with 20c. an extreme to quote for washed combing. Australian wools are meeting with a slow sale, but are held steady. The London sale closed May 16, with the market easy except on crossbreeds. American purchases at the sale were 1,000 bales. Carpet wools are quite but steady.

BRITISH FOREIGN TRADE FOR APRIL.

The London *Financial News* says: "Although not quite so brilliant as those of March, the Board of Trade returns for April are decidedly satisfactory. The increase in the value of the imports is £1,467,442, or 4.27 per cent., and in that of the exports £1,174,388, or 6.80 per cent. As the percentage improvement in the imports for the four months of the year is 9.58 per cent. and in the exports 13.84 per cent., the rate of expansion has slowed down very considerably. This need not alarm us at all, for three circumstances have to be taken into account as tending to make the trade of April appear less active than that of the three preceding months. The extra day in February must not be ignored, though it is of comparatively minor moment, and probably represents no more than £280,000 in the imports and about half that sum in the exports. What is of more importance is the fact that in the earlier months of last year the commercial movement was hampered by extremely severe and stormy weather, whereas in April, 1895, trade was carried on under more normal conditions. The third influence telling against the maintenance of the exceptional activity in the first quarter of the year is the overstocking of many markets as the result of the free exports of the past few months. The slackening of the American demand for woolens is an example of this, and it is to be noted that many articles of export which show decreases for April still compare favorably with last year's figures on the basis of the four months. Naturally, this temporary decline in the demand for many staples has led to a reduction in our purchases of raw materials, and wool may again be cited as a case in point.

"Under four headings there were decreases in imports last month, the most conspicuous being that of £1,008,664 in duty-free foodstuffs. Under corn may be observed a falling off in the quantity of wheat, but a slight rise in its cost. India sent exactly the same quantity as in April last year, but got £6,000 more for it, and for smaller bulk the Argentine obtained appreciably more money. Unrefined sugar, bacon and potatoes show the greatest declines, alike in quantity and value; but we have also done with less foreign oats, beef, butter, cheese, lard, hops and salt fish. Perhaps the earlier incidence of Easter explained the decline in the last article, for we have had a lot more in the four months than in the corresponding period of last year. The more genial weather may account for the smaller consumption of lard, butter and bacon, and similarly with the materially smaller deliveries of cocoa, which is essentially a winter beverage. The decreases in the imports of chemicals and oils are relatively large, though small in actual amount, and on the four months there are increases in nearly every item in these categories. Why imports, by means of the parcels post, should have declined there are no means of ascertaining. The least satisfactory figure in the import department is the addition of £702,579 to the value of manufactured articles. We cannot complain of the extra £350,000 spent on behalf of the fair sex on silk broadstuffs, £32,000 on ribbons and £44,000 on other kinds of silk, nor of the increase of £40,000 for straw hats and £36,000 for gloves. But it is disheartening to find £90,000 more paid for foreign iron, $34,500 for foreign paper—not to speak of other articles. Much more agreeable is the increase of £818,964 in raw textile materials, cotton standing for £1,244,458, of which the bulk came from the United States, though Egypt and India shared in the improvement. The diminution in wool was £440,000, Australasia sending £590,000 less than in April last year. To the increase of £331,418 in metals, copper contributed most largely; but Spanish iron ore, lead and zinc also helped to swell the amount. Other raw materials rose $318,784, despite a diminution of £219,600 in nitrate of soda, heavy arrivals of timber being responsible for most of the increase under this head,

"Among the ten heads and sub-heads into which the exports are divided there is only one decline, of £37,886, in raw materials, all under wool and 'other articles,' coal continuing to show a recovery. The biggest relative gain is £484,452, in metals, almost wholly in iron of one sort and another. Australasia, South Africa, Argentina, China and Japan are all improving customers, and the growing quantities of iron and hardware going to these countries speaks of returning activity and prosperity. Exports of railway iron are £216,000 up, India taking £82,000, Japan £46,000, Argentina £21,000, Sweden £19,000, and Australasia £11,000 more than in April last year. It is worth noting that railway trucks to an increased value of £45,000 were also exported. Under machinery and millwork there is a gain of £97,541, of which £44,000 is in mining machinery. Of this, £36,000 went to South Africa and £13,000 to Australasia. Less pleasant is the increment of £34,000 in the value of textile machinery exported, India adding £43,000 to her purchases, which will, no doubt, be used to the disadvantage of Lancashire. Meantime, the cotton industry is having a better time than it had last year. Of the increase of £394,474, cotton yarn claims £91,552 and piece goods £289,462. Of the former, Japan has taken £41,000, Madras £30,000, Bombay £10,000, and Bengal £9,000 more, but the requirements of China and the Straits have been smaller. Of piece goods, Bengal took £390,000, Bombay £163,000, China £29,000, and Japan £25,000 more, but Madras took £72,000 and the Straits £16,000 less. South and Central America are not keeping up their purchases of cotton goods. Under woolen yarn there is a gain of £25,249, wholly due to German buying. The continent has absorbed woolen tissues freely, so that, despite a reduction of £24,600 in the shipments to the United States, after many months of progress, a check has come to the exports of worsted tissues, which are £106,223 down. The United States, presumably overstocked, bought £180,300 less than in April last year, but it is pleasant to find that China, Japan, Argentina and Australasia are waking up to the excellence of Bradford fabrics. Under the other categories there is no feature of special interest, though reductions of £61,529 in the value of arms and ammunition and of £14,094 in cycles exported may be noted. An improving demand for clothes and boots for all the colonies is also worth recording."

THE FOREIGN LOCOMOTIVE INDUSTRY.

The London *Iron and Steel Trades Journal* says: "Speaking generally, the locomotive building trade of this country is just now in a comparatively satisfactory position, for although the orders which have transpired during the past month have been very few, there is no doubt that new work continues to be given out sufficient to keep the majority of the works busy. This applies more especially to the Lancashire and west of Scotland districts, as builders in the Leeds district, although not absolutely without work, would welcome some large orders. Among the contracts in hand in the last-named district, there is one for 40 locomotives for Queensland, while several locomotives are in course of construction, both for railways in Sierra Leone and Lagos. In the Glasgow district there is a large amount of work in hand for Western Australia and South Africa, while the contracts lately placed in the Lancashire district include a number for India and a lot for Japan, Messrs. Beyer, Peacock & Co., Manchester, being the favored firm as regards the Japanese orders. Taken altogether, the export trade during the past month must be considered to have been fairly satisfactory, seeing that it shows an increase, not only over the preceding month, but over the corresponding period of the previous two years. The figures are: March, 1896, £76,508; February, 1896, £66,554; March, 1895, £63,622, and March, 1894, £49,053. There was a large decrease in the shipments to the continent, the value standing at only £3,351, as against £6,644 in March last year. This decline is principally due to the diminished demands of Spain, the locomotives exported to that country having been valued at £822 last month, as compared with £3,570 in the corresponding period of last year. Trade in locomotives with Russia continues practically a blank.

"During the month a number of locomotives reached Russia from America for use on the Siberian railway. The Russian government has just now a number of orders to give out for locomotives, and are at present in negotiation with German builders with reference to a lot of 300. Is it not possible to secure at least a share of these orders? Two further sections of the Trans-Siberian Railway are to be opened for traffic during 1897, and the estimates of the authorities of the rolling stock required for the operation of these two sections includes nearly 200 locomotives.

"German locomotive builders are just now exceedingly well employed, both on engines for the Prussian state railways and for the Russian government, and it is probable that in the case of the orders above mentioned they may be unable to meet the conditions as regards time of delivery. The British East Indies have for some time past been our best customer for locomotives, but the programme of railway construction is apparently approaching completion, as the exports of locomotives have lately been steadily declining, the value last month being recorded as only £6,908, as compared with £10,854 in February last and £24,485 in March last year.

"On the other hand, trade with South American countries is being maintained at a fairly satisfactory level, the total for last month being £20,254, the respective returns for the preceding month and March, 1895, being £16,191 and £19,673.

"As regards Australasia, curiously enough, the returns show a large drop as against February last, being only £2,777, as compared with £12,828. This is, however, only a temporary lull, for large orders are in hand both for the Queensland and West Australian railways. Having regard to the exports to hand from the latter colony, regarding the want of rolling stock, further orders from this market may safely be expected.

"The most satisfactory feature of the past month is the fact that the long-expected development in the trade with South Africa has at length come to pass. For several months very little material has been sent to this market, but last month the exports took a sudden jump from £108 in February last to no less than £26,281, the total for March, 1895, being £1,342.

"Turning now to the returns for the first quarter of the year, it is pleasing to find that the total exports exceed those of the past two years, and are only within about £2,000 of those of the first quarter of 1893. The total for the three months is £236,446, as against £198,480 for the same period of last year. Looking at the returns for the quarter, we notice a serious falling off in trade with Spain, but, on the other hand, satisfactory increases as regards South Africa, Australasia, South America and the British East Indies. Although the total shipments for the first quarter of 1893 were the largest for that period during the past four years, the small totals recorded for the succeeding months of that year point to the fact that the orders then held were not so satisfactory as now, so that we are looking forward to the present year showing a larger total, and consequently a brisker state of affairs than has been the case for the past three years. We have above drawn attention to the fact that Russia is in the market for locomotives. The same might also be said of Bulgaria. To conclude, we cannot do better than draw attention to the note in our 'Gossip' column last week, wherein the British Chamber of Commerce of Turkey, in reference to British enterprise and railways in Turkey, states that 'it is a melancholy sight for us Britishers to see railway after railway * * * going in the hands of French and Germans * * * and English material previously used strictly excluded.' It is sincerely to be hoped that locomotive builders will take the hint and endeavor to secure some of the European orders which are at present in the market."

AUSTRALIAN TOBACCO.

The Bombay *Gazette*, referring to Mr. Tripp's paper on the "Tobacco Industry of India," and the discussion thereon in the Indian section, writes:

"Australia threatens to compete with India as a tobacco-producing country, and active measures are now being taken with a view to the development of this industry. Small quantities of tobacco have for some time been grown, and the Melbourne Agricultural Department is of opinion that a highly profitable trade might be built up. With that object in view, therefore, the services of Mr. Bondurant, an American expert, were engaged, and he has just reported upon his inspection of the north-eastern districts of Victoria. In order to make the plantations there repay cultivation, he declares that greater care in growing, curing and grading are necessary. The curing sheds in Australian plantations are now open, whereas experienced manufacturers assert the absolute necessity for curing sheds to be inclosed on all sides. Mr. Bondurant has pointed out this to local cultivators, and has given instructions to the different settlers regarding curing, grading and cultivation. Good may result from this. Mr. Bondurant makes two recommendations—first, that the suitability of soil and climate of particular districts for the different classes of tobacco should be carefully ascertained, because what would suit the soil and climate of one district would not suit another. He further recommends that small experimental stations be established in different parts of the colony for the purpose of making tests with the different varieties, and when it is ascertained which thrives best in that district and gives the best results, there would be more likelihood of growers being able to realize a profit from its cultivation. He also suggests that, if crown lands cannot be obtained for the experiment, holders of land in the districts might find it to their advantage to give a small site for the purpose. His second suggestion is that at these stations there should be model curing sheds erected, where object lessons could be given to tobacco industry." The Bombay *Gazette* urges the systematic improvement of the tobacco cultivation in India, and adds: "Tobacco cultivation in India might be materially improved and rendered more profitable were the Agricultural Department temporarily to employ an expert, who would point out the defects in the present systems of cultivation and manufacture. Private owners, we know, have engaged German supervisors in their factories, but they have been manufacturers rather than cultivators, and the defects of the Indian cheroot lie in the leaf, and not in the manner in which it is rolled. Indian cigar makers have deft fingers and turn out a shapely, well-finished cigar. The material they have to work with is not as good so it might be."

BOARDS OF TRADE TO MEET.

A Detroit dispatch says: "It now transpires that the attendance at the National Non-Partisan Commercial Tariff Convention, which meets in this city June 2, will be considerably larger than its projectors at first anticipated. Secretary S. B. Archer, of the Tariff Commission League, has received credentials already from commercial bodies who have chosen a total of over 1,000 delegates. There will also be some delegates from laboring and agricultural organizations. At least double that number of accredited delegates are expected, representing boards of trade and chambers of commerce and other bodies of like character. Other persons who attend will be entitled to vote on all questions excepting those concerning permanent organization. From letters received the sentiment favoring holding annual non-partisan tariff conventions is almost unanimous. The Santa Fé Woman's Board of Trade, the only organization of its kind, sends four delegates.

"The convention committee, consisting of presidents of boards of trade, commercial bodies and labor and farming organizations, representing various sections of the country, will meet June 1 and arrange the final details and choose temporary officers.

"Auxiliary to the convention, and designed to facilitate discussion, there will be appointed four large committees. Their province respectively will be to recommend ways and means for taking the tariff question out of partisan politics and making it a business question; to suggest ways and means for improving the consular service in the way of increasing our foreign trade, especially with the central and southern republics; to report upon the advisability of recommending to Congress the creation of a department of commerce, manufacture and labor, the chief of such department to be a member of the President's Cabinet; to make recommendations as to a permanent organization and the holding of annual conventions for considering the tariff and other national questions.

"The convention is to be absolutely non-political, and all questions must be discussed from a purely commercial standpoint. The convention will probably continue a week or more."

THE CHINESE EMPEROR ON RAILWAYS.

The London *Times* says: "The text of the edict of the Emperor of China respecting the construction of railways in that country has now reached London. The Emperor begins by stating that he has read the memorial of the Ministry of War recommending the appointment of a high officer to take charge of the construction of railways. The latter, the Emperor observes, are most important for the maintenance of trade as well as for the employment of the masses of the people. Hence he has decided to encourage railways in every way. Recently he instructed the princes and ministers to commence with a line in the neighborhood of the capital, and they put the work of surveying a route between Peking and Tientsin under the care of Hu, a provincial judge. Hu's report has also been read by the Emperor, and from this it appears that the line, starting from Tientsin, would take the route of the western banks of the Grand Canal, and, passing northwards, would cross the southern parks and terminate at the Lukon bridge, in the western suburbs of Peking, traversing a distance of about 80 miles. The estimate for the construction is 2,400,000 taels. The plans, too, have been prepared, whereupon the Emperor observes that in al new matters which require a beginning it is difficultl to foretell the result, but that in appointing a responsible officer to take charge of the construction of the proposed line it is important he should have full confidence in the man. As Hu was the first to recommend the undertaking, and has been in charge of the survey, it is only fair that he should have a chance of carrying it out, and accordingly he is appointed director-general of railway construction. The Board of Revenue and the Viceroy of Chi-li are to supply the necessary funds. With reference to the grand trunk line from Peking to Han-kau, the Emperor says that, as the distance is great and the cost immense, he grants the privilege of constructing it to wealthy men in the various provinces who can show a capital of 10,000,000 taels or more. As this line will, therefore, be a purely commercial affair, government officials are ordered not to interfere with the gains or losses of the company, and the promoters are promised tokens of imperial approbation if they are successful. The edict is addressed not only to people in the capital, the provinces and other dependencies of the empire, but also to 'our people laboring in other lands.'"

5% Bonds of 1925.

(LOAN OF 1885.)

In consequence of the appointment of Receivers of the Baltimore and Ohio Railroad Company, and with a view to the protection of the interests of the holders of the above mentioned Bonds, we invite holders of such Bonds to deposit the same, with all Coupons attached, at our office, on or before June 1, 1896, subject to an agreement dated April 10, 1896, between Speyer & Co. of New York, Speyer Brothers of London, and the depositing Bondholders. Copies of such Agreement may be obtained on application at our office.

We will buy, on the terms of the Agreement, the Coupons and interest instalments maturing August 1, 1896, on deposited Coupon or Registered Bonds, in case the Baltimore and Ohio Railroad Company should make default in paying the same when due.

Trust Receipts will be given for Bonds deposited, and such receipts will be exchangeable for engraved Bearer Certificates. Application will be made to the New York and London Exchanges for the listing of these Certificates.

Speyer & Co. and Speyer Brothers will make no charge against depositing Bondholders for their services.

SPEYER & CO.,

The Johnson Company

FIRST MTGE. 20 YEAR 6 PER CENT.
SINKING FUND GOLD BONDS.

PRINCIPAL AND INTEREST PAYABLE IN GOLD.

Interest Payable March 1st and September 1st.

Total Issue, $2,000,000,

Of which there remains outstanding $1,900,000.

The JOHNSON COMPANY ranks among the leading companies in the United States in the production of Bessemer steel. Its works are located at Lorain, Ohio, and Johnstown, Pennsylvania. The plant at Lorain is equipped with the latest and most approved machinery, is advantageously located for working Lake Superior ores and Pennsylvania fuel by reason of low cost of transportation of materials and products, and unites all the requisites for economical production

The following report of Mr. Stephen Little, Expert Accountant, certifies to the cost of the plants and property of the company, and to the profits of its business for the years 1890 to 1895, inclusive, aggregating $2,859,667.91 (though the results for the year 1894 were materially reduced by reason of removal of part of the Johnstown plant to Lorain), and averaging $476,611.32 per year for the period named.

REPORT OF MR. STEPHEN LITTLE.

New York, April 24th, 1896.

WALTER G. OAKMAN, ESQ., *President,*
Guaranty Trust Company of New York,
New York.

DEAR SIR:

I have made a careful examination of the books and accounts of The Johnson Company at Lorain, Ohio, and herewith beg to enclose attested statement of their assets and liabilities of date of December 31, 1895. I have examined with care the items of cost of plant

At Lorain, Ohio	$3,397,465 92
At Johnstown, Penn	1,401,615 08
Total	$4,799,081 00

and certify that the sum stated ($4,799,081) is the actual amount expended in the construction of said plants, and that the other items of real estate investments, inventory, and current assets are the actual cost thereof as ascertained from the accounts of the Company.

I have also examined the results of operation of the Company for the past six years, and find that there was earned in these years, respectively, the following profits, Gross and Net, viz.:

Years.	*Gross profits.*	*Less interest.*	*Net profits.*
1890	$679,161 21	$36,383 25	$642,777 96
1891	533,255 82	32,926 28	500,329 54
1892	668,628 87	31,303 31	637,325 56
1893	364,520 14	29,626 94	334,893 20
1894	275,964 29	7,963 49	268,000 80
1895	578,372 97	102,032 12	476,340 85
Totals	$3,099,903 30		$2,859,667 91
Average per year	516,650 55		476,611 32

Yours truly,
(Signed) STEPHEN LITTLE.

We have been furnished with affidavits of disinterested appraisers, certifying the present value of the manufacturing plants to exceed the cost as stated by Mr. Little.

The bonds bear date September 1st, 1894, are payable in twenty years, with interest at six per cent. (6%), interest and principal both payable in gold. Payment is secured by a First Mortgage Trust Deed covering all the manufacturing properties at Johnstown and Lorain, and by a mortgage on extensive and valuable real estate in Lorain.

By the terms of the Sinking Fund the Company is required to retire annually One Hundred Thousand Dollars ($100,000) of these bonds, by lot, at 105 and accrued interest, unless the Company can, through advertising, purchase this amount at a less price. Bonds to the amount of $100,000 have already been retired.

This Company's past and present success, the permanent character of the demand for Bessemer Steel, the especially favorable conditions enjoyed by this Company, together with the Sinking Fund requirements, make these Bonds an attractive investment.

Early application will be made to list these Bonds on the New York Stock Exchange and Philadelphia Stock Exchange.

Subscriptions at par and accrued interest for

$1,500,000

of the above described bonds will be received by the undersigned at its office (where subscription blanks can be obtained) on or before Wednesday, May 27th, at 3:00 P.M., when books will close. The right is reserved to reduce or reject subscriptions. Allotments will be made on May 29th.

Payment for bonds to be made on June 2d.

The entire issue has been underwritten.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, MAY 30, 1896.

President Cleveland has only done what was expected in vetoing the River and Harbor bill. This measure, as is pointed out in the message, directly appropriates or provides for the immediate expenditure of nearly $14,000,000 for river and harbor work, which sum is in addition to appropriations contained in another bill for similar purposes amounting to a little more than $3,000,000, already favorably considered at the present session of Congress, so that the contemplated immediate expenditures for the objects mentioned amount to about $17,000,000. The bill, however, authorizes contracts for future work on rivers and harbors, the obligations on account of which, together with the appropriations made for immediate expenditure, will amount to about $80,000,000. The President says, in vetoing the measure, that many of the objects for which it appropriates public money are not related to the public welfare; that many of them are palpably for the benefit of limited localities or in aid of individual interests, and that on the face of the bill it appears that not a few of these alleged improvements have been so improvidently planned and prosecuted that after an unwise expenditure of millions of dollars new experiments for their accomplishment have been entered upon. The measure, the President says, opens the way to insidious and increasing abuses, and is in itself so extravagant as to be especially unsuited to times of depressed business and resulting disappointment in government revenue. A well-merited rebuke to some of the Washington legislators is conveyed in the President's suggestion that at a time when the issue of government bonds to maintain the credit and financial standing of the country is a subject of criticism, the contracts provided for in the bill would create obligations of the United States amounting to $62,000,000, no less binding than its bonds for that sum.

A startling misfortune befell the cities of St. Louis and East St. Louis this week in the visitation of a tornado, which killed a number of people, estimated, according to present accounts, at between three and four hundred, and seriously injured others to the number of several hundred, in addition to causing the destruction of property to a large amount, which cannot be very accurately estimated just at present. Other places in the country seem to have suffered from similar though less destructive visitations. Expressions of sympathy and offers of substantial aid have been received by the mayor of St. Louis from the authorities of a number of cities throughout the country, and beyond doubt any appeal from the St. Louis authorities would be responded to promptly and generously, though it seems unlikely that such an appeal will be made. The Washington authorities have ordered the engineer officers in the vicinity to render all the assistance in their power to the people of the afflicted district, and Congress has adopted a joint resolution directing the loan of tents and such other relief as the Secretary of War may deem necessary.

The first party to put a presidential ticket in the field this year is the Prohibitionist organization, which, in a convention at Pittsburgh this week, nominated Joshua Levering, of Maryland, as its candidate for President. The principal interest attaching to the proceedings arose out of an effort to procure the adoption by the convention of a plank declaring in favor of the issue of all money by the government only, without the intervention of any private citizen, corporation or banking institution, and of the free and unlimited coinage of silver at the ratio of 16 to 1 without consulting any other nation. This plank, after a most vigorous discussion, was defeated by a small majority, and the convention adopted a platform declaring in favor of the legal prohibition by state and national legislation of the manufacture, importation, exportation, interstate transportation and sale of alcoholic beverages.

Judge Wheeler, in the United States Circuit Court at New York, has rendered a decision dismissing the bill filed by the United States against the Joint Traffic Association, thus affirming in effect the legality of the agreement under which the association is formed. The question at issue in the case involved simply that of the legality or illegality of the contract, and of the right of the United States as plaintiff to maintain the suit if it were illegal. The court held that the act of 1890 against unlawful restraints and monopolies expressly authorized such a proceeding in equity as that brought to prevent a violation of its provisions; that the suit was well maintained if the contract were within it; that although railroads were not expressly named in the act, it applied to all contracts and combinations in restraint of trade or commerce within the states, and that although railroads do not trade among the states, they carry for those who do, and what would restrain them from so carrying would seem to be a restraint of such commerce.

The court held that the provisions of the contract under consideration did not provide for lessening the number of carriers or their facilities, nor for raising their rates, except expressly by its terms not contrary to law, and, therefore, not beyond what is reasonable; that the Interstate Commerce law, section 1, requires all rates to be reasonable, and the making of reasonable and lawful rates upon carriage in any traffic cannot be any restraint in law upon such traffic; that the soliciting of custom is no part of the duty of common carriers, and dispensing with soliciting agents or with the control of them cannot be illegal, nor an agreement to do so be an illegal contract, and that as the case rested wholly upon the contract as made, and not on anything actually done under color of or beyond it, and each road was left by it to carry on its business within lawful limits as before, no unlawful restraint of commerce seemed to be provided for by it; and no ground for relief under the statute of 1890 was made out. As regarded the Interstate Commerce law, no provision was made by it for enforcing its regulations in equity, except to carry out orders of the commission, and authority for the suit to restrain any violation of that law must appear otherwise or fail. Touching the question of pooling, the court said that, so far as the agreement went, each road carried the freights it might get over its own line at its own rates, however fixed, and had the proceeds, net or other, of the earnings to itself. Very able judicial opinions and learned commentaries and disquisitions upon pooling, too numerous for separate notice, had been referred to, the court said, but none made it include what was left in wholly separate channels, and provision for reasonable, although equal or proportional, rates for each carrier, or for a just and proportional rate for each carrier, or for a just and proportional division of traffic among carriers, did not, in the view of the court, seem to be either a pooling of their traffic or freights or a division of the net proceeds of their earnings in any sense.

The Ways and Means Committee of the House of Representatives has, by a strict party vote, adopted the report of the majority on the policy of reciprocity. The report announces, as the result of the investigation that has been conducted and of the testimony that has been taken, that there is a remarkable unanimity in the sentiments expressed concerning the value and results of the reciprocity arrangements negotiated with certain countries and colonies under the authority of section 3 of the tariff act of 1890, and the disastrous effect of their repeal, and that the commercial and industrial interests of the United States, as thus represented, without political distinction, are almost without exception anxious that such arrangements shall be renewed and negotiated with other nations, and that the reciprocity policy be permanently adopted in future legislation affecting the tariff and the foreign commerce of this country. The report discusses at some length the effect of the policy of reciprocity and of its reversal upon particular interests, such as those having to do with sugar, milling and live stock, the conclusion being drawn in each case that the abandonment of the policy of reciprocity has had a detrimental effect.

Touching the situation as regards the Latin-American countries, the report says that it requires no argument to demonstrate that the people of Cuba will consume more flour if the duty on that article is reduced from $5.78 to 88c. a barrel, or that the people of Brazil, since they produce no other food products, will buy their supplies in the United States if they can import them from this country at a duty of 25 per cent. less than they must pay on the same articles when imported from Europe, and that when it is considered that the value of cotton goods imported into the Latin-American countries annually reaches beyond $100,000,000, it is a waste of time to discuss the advantage of securing such a concession. The report says that the annual imports of the Latin-American countries average $600,000,000, that of these we have usually furnished about 15 per cent., and that the annual exports of the Latin-American countries average about $600,000,000, of which we have usually purchased about 30 per cent., whereas in their commerce with Great Britain these conditions are reversed. The committee expresses regret, in conclusion, that the impossibility of securing legislation from the present Congress makes it inexpedient to report a measure that will answer the urgent demands from the different industries engaged in the export trade, and suggests that the application of the reciprocity principle to our foreign commerce can be more wisely made in connection with a general revision of the tariff than in a separate measure.

A REVIVED DEMAND FOR SILVER.

While the slightly firmer tone of the silver market has not failed to attract notice in financial circles here and abroad, it has not apparently resulted in any renewal of speculation in the metal. There has, in fact, been no decided advance in the price for bars, and the salient feature of the situation in that connection is to be found in the presence of a considerable demand, which absorbs the current supply and holds quotations exceedingly firm.

Several explanations of the matter have been offered. One New York authority, for instance, prints the following: "We can state from a reliable source that the French government is buying anywhere from 1,000,000 to 2,000,000 ounces of silver each month for coinage purposes. It is stated also that this coinage is not only for the French government, but for many other governments for which France coins money. A large dealer in silver this week paid as high as 68.45 for a round lot of silver, and a large sale is also reported at 68½. One of the largest exporters of silver was bidding 68⅜ at the close on Tuesday afternoon." A leading bullion house is also quoted as saying: "There is a steady demand for silver for export to London. From London it goes at present to France for coinage and to Germany and Russia. We find there is an unusually strong desire for gold and silver in European countries. We presume the silver is wanted entirely for coinage."

The late files of the London financial papers, while noting the appearance of a continental demand for silver, do not, however, furnish data in support of the views that are expressed in the above quotations. One of the best authorities on the subject describes the situation as it existed a fortnight ago in the following words: "The demand is special, and, when the order is filled, the price is likely to fall back again. It will be remembered that last week the Spanish government accepted tenders for 800,000 ounces. It is believed that those who tendered had only a portion of the amount in hand, and that the Spanish government is pressing for delivery. Consequently immediate purchases have to be made to deliver the amount contracted for. India is quite out of the market, the fall in exchange, even with a rise in the price of silver in India, not permitting India to purchase at anything over 30⅞. China might give a little higher price than India, but it is not buying over 31d. Although a further improvement in the price may be witnessed before the special order is completed, the price thereafter is not expected to fall below about 31d. per ounce, as Japan comes into the market upon any evidence of weakness and is disposed to purchase at about that figure."

The position of silver, it will be seen, is, therefore, not unfavorable, even if no further marked advance need be expected. The important consideration is the effect which the coming demand in Europe, whatever its origin, will have upon the exports from this country and the production of silver at the west. For the year to date about $20,000,000 in silver has been shipped, and, as already indicated, the existing demand is of a character to insure a material increase in the shipments. The impression that the production in this country has fallen, while general, is not accepted in the best-informed circles. On the contrary, it is stated that the application of electrical power in connection with mining operations is becoming general, and has resulted in a marked economization of the cost of production, so that people in a position to know are confident that the output has not only not fallen off, but is materially increasing, the expectation being that this year will show an increase as compared with previous years.

THE CONTINUED GOLD MOVEMENT.

The current week has developed no change in the condition of our foreign exchange market, or in the outflow of gold to the continent of Europe which it tends to create. The shipments for the current week have amounted to $4,600,000, or a total since the beginning of April of $21,875,000. It may be noted, however, that the money market and the Stock Exchange itself are not as indifferent as was the case in the commencement of this outward flow of specie, to the renewed depletion of the United States Treasury gold reserve. That fund, which stood in the neighborhood of $128,000,000 two months ago, is now reduced to about $108,000,000. The circumstances create a belief that before long the amount of the Treasury reserve will again drop to below the $100,000,000 mark, and this fact has very much to do with creating an expectation in the money market of higher rates and more or less financial pressure.

In this connection some light has been thrown upon the factors which enable foreign bankers to ship gold as a means of supplying the market with bills of exchange. This week's shipments, like those which preceded them, have gone to Germany, and are the result, it would seem, of conditions existing in the German money market through which advantage is taken of our system of currency management, the process being in no wise different from what has been going on for several years past, and which has been at the bottom of the continued depletion of the Treasury gold reserve, and the consequent necessity of replenishing it by means of bond issues. It seems that the financial operations of the Russian government, although imperfectly understood, have very much to do with the situation in Germany; calls upon the markets of the latter country from Russia have resulted in high rates of interest at Berlin and Frankfort. The average rate for money at those cities in recent years has rarely exceeded 2 per cent. At present, however, 2¾@3 per cent. are quoted, this condition being the result of a heavy contraction in the outstanding circulation of the Imperial Bank of Germany, the step in question having been obviously taken for the purpose of enforcing higher rates and protecting itself against demand for specie from Russia. The decrease in the German bank circulation is in the neighborhood of $18,000.000, while at the same time, within the past month, its stock of specie has been increased by something like $8,000,000, the whole of which, it is to be presumed, came directly or indirectly from this country. During the earlier part of the year, indeed, the German gold reserve suffered a decrease of about $15,000,000, and the process now going on at the expense of the United States Treasury reserve is obviously the carrying out of a well-considered banking plan on the part of the Imperial institution, while the offering of a small premium or allowance enables the transactions to continue, though exchange rates here are still slightly below the figure which would justify gold exports to London.

SUGAR-BOUNTY APPROPRIATIONS TO BE PAID.

The sugar planters will receive their bounties under the act of March 2, 1895, providing for their payment. This point has been settled by the decision of the Supreme Court of the United States in the cases of The Realty Company vs. The United States, and Gay vs. The Same. The first-mentioned plaintiff represented the beet-sugar men and the other the cane-sugar producers. They secured decisions in their favor in the District Court of the United States for the Eastern District of Louisiana, and these decisions have been affirmed by the federal court of last resort. It will be recollected that Comptroller of the Treasury Bowler declined to pay the sugar-bounty claims, on the ground that the legislation of 1890 providing for the payment of bounty was unconstitutional—a ground in regard to which he had the support of a decision of the Supreme Court of the District of Columbia.

No decision in reference to the constitutionality of bounty legislation had been rendered by the Supreme Court of the United States, however, and in the decision just rendered it does not pass upon that point. The question of the constitutionality of the bounty provisions of the law of 1890 was raised in the case of Field vs. Clark, decided some time ago, but the court declined to pass upon the question, on the ground that it should not be decided without very mature investigation and deliberation, and only when absolutely necessary to the determination of the rights of the parties. This is, in substance, the ground on which the court has refused to pass upon the question in the cases just decided. The court says that in the view it takes of the cases before it, the rights of the parties may be passed upon and the actions finally decided without entering upon a discussion as to the validity of the bounty legislation contained in the act of 1890, and without deciding that question, and that for the purpose of deciding the case, it deems it unnecessary to decide whether or not such legislation is beyond the power of Congress.

Leaving out of consideration, therefore, the question of the constitutionality of bounties, as such, the court holds that the appropriations of money in the act of 1895, to be paid to certain manufacturers and producers of sugar who had complied with the act of 1890, were constitutional and valid. The court, after reviewing the history of the legislation of Congress in reference to sugar bounties and the position of the manufacturers thereunder, said in criticism of the government's position:

> In our opinion it is not correct to say that no moral, equitable or honorable obligation can attach in favor of persons situated as were the defendants in error here, when the act of 1895 was passed. We think obligations of that nature may arise out of such circumstances. We regard the question of the unconstitutionality of the bounty provisions of the act of 1890 as entirely immaterial to the discussion here. These parties did not at that time (when manufacturing under its provisions) know that the act was unconstitutional; they could not be regarded as failing to do their whole duty because they proceeded with the manufacture of sugar in reliance upon the bounty promised by the government, under an act recognized by the officers of the government as valid, and which they were at all times executing. But it is said that if the act be unconstitutional the law imputes to these parties at all times a knowledge of its invalidity, and that it is not rendered valid by acquiescence in its provisions for any length of time, even by the officers of the government holding the highest places therein, and who are charged with its execution and believe in its validity. Being unconstitutional, there never was a moment, it is stated, when there was any valid act, and, therefore, no equities can arise in their favor because of any acts done by them upon the faith of the act, which they were bound to know was wholly void. This reasoning does not exactly fit the case. It is not a question whether any strictly legal rights can arise out of an unconstitutional act. It is a question whether equitable considerations can attach to a claim which, among other grounds, is based upon an act that was supposed by all the officers of the government to be valid, and which was repealed only when the whole taxing act of 1890 was subjected to a careful and comprehensive revision.
>
> * * * We are of the opinion that the parties, situated as were the plaintiffs in these actions, acquired claims upon the government of an equitable, moral or honorary nature. Could Congress legally recognize and pay them although the act of 1890 as to its bounty provisions might be unconstitutional? It is true that in general an unconstitutional act of Congress is the same as if there were no act. That is regarding it in its purely legal aspect. Being in violation of the Constitution, that instrument must govern. and no one can base any legal claim as arising out of such an act. That is a very different principle, however, from that which we think governs, in this case. The persons for whose benefit the appropriation contained in the act of 1895 was made are not, in the view we take, asserting the existence of a legal and valid debt against the United States, which is at the same time based upon an unconstitutional act of Congress. No such inconsistent and illogical position is taken. They are asserting that by reason of the occurrences which took place before the appropriation, among which was the passage of the act of 1890, they were so placed before Congress as to authorize that body to recognize the equities of the situation and to pay their claims, which, while they were not of a legal character, were nevertheless of so meritorious and equitable a nature as to authorize the nation through its Congress to appropriate money to pay them.

The court, in conclusion, said that, as a matter of fact, the counsel for the United States did not deny that Congress could direct the payment of debts that had only a strong moral and honorable obligation for their support, but claimed that in these cases no foundation whatever was laid for its application, because the claim arose out of the unconstitutional provisions of the act giving bounties in 1890; that it was impossible to build even an equity out of an act of Congress which was utterly void, and that as the original act offering and paying bounties was void, it could not become legal to pay them because of any alleged equities of those who would suffer from their sudden discontinuance as set forth in these cases. The court said that under the circumstances surrounding these cases the validity of the act of 1895 could not be questioned successfully. Regarding the question whether the facts in any given case bring it within the description of that class of claims which Congress can and ought to recognize as founded upon equitable and moral considerations and grounded upon principles of right and justice, the court said that generally such question must in its nature be one for Congress to decide for itself, and that its decision recognizing such a claim and appropriating money for its payment can rarely, if ever, be the subject of review by the judicial branch of the government. Upon the general principle, therefore, that the government of the United States, through Congress, has the right to pay the debts of the United States, and that the claims in these cases are of a nature which that body might rightfully decide to constitute a debt payable by the United States upon considerations of justice and honor, the court held that the act of Congress

making appropriations for the payment of such claims was valid, without reference to the question of the validity or invalidity of the original act providing for the payment of bounties to manufacturers of sugar, as contained in the tariff act of 1890. The question of the constitutionality of bounty legislation remains to be decided at some future time, and upon another state of facts.

CONGRESS ON THE EVE OF ADJOURNMENT.

The average citizen has come to look upon the adjournment of Congress as a thing to be welcomed under ordinary circumstances. Session after session is seen to close without the passage of measures for which there is an urgent demand from the business community, as, for example, the bankruptcy bill, which has waited so many years in vain for enactment. There is at all times in both houses too much attention paid to the effects of proposed legislation, or of the manner of dealing with it, upon the position of parties, and too little attention devoted to the bearings of the proposed legislation upon the general interests of the public. To some extent this condition of things is unavoidable under a system of government by means of parties, but nothing is to be gained by regarding it as inevitable in the full extent to which at times it develops. Government without criticism would be irresponsible government, and that would be scarcely less objectionable under a parliamentary system than government by a single irresponsible individual.

If, however, the methods of dealing with public questions under ordinary conditions tend to an exaltation of party over general interest, the tendency becomes very much more marked when, as is the case at present, a presidential campaign is in sight. Then the spectacle is presented of party leaders bending every effort to make party capital out of every subject brought up for consideration. Restraints which, under ordinary circumstances, would operate to check this tendency to some extent are lacking, and the legislative chambers present the appearance of a battle ground, whereon the preliminary struggles for position are fought out. To let party opponents take no advantage, and to shape their course so that whatever capital is to be made will inure, if possible, to their own side, becomes the overmastering purpose of party leaders.

The present session of Congress is drawing to a close on the eve of a presidential campaign, and it need scarcely be said that but little advantage to the public is to be expected from the continuance of the session. It is an open secret that the two houses are only kept together by uncertainty as to what the action of the President will be upon the great body of appropriations authorized by the River and Harbor bill. The discussions, particularly in the Senate, give little suggestion of any purpose to complete helpful legislation, and the action of some of the most prominent leaders in that body upon propositions looking to the raising of additional revenue to provide for the wants of the government seems inexplicable, if their declarations are to be regarded as sincere. It is time for the session to be brought to a close, and the conclusion of the labors of the two houses will be hailed as a relief by the public at large, and most of all by those who have had occasion to follow their proceedings with any degree of closeness.

INFLUENCE OF THE TRUNK-LINE COMBINATION.

The most interesting matter in railroad circles at present is the decision of the United States Court in New York upon the legality of the Joint Traffic Association, formed by the trunk lines and their allied lines covering the territory east of Chicago. The contention of the government was that the association is a pool within the meaning of the prohibitive clause of the Interstate Commerce act. The railroads, on the other hand, argued that the whole aim of the association was not to divide earnings or traffic, or to suppress competition, but to make it open and above-board. The court has dismissed the bill filed by the United States against the association, though it is intimated that the government will bring the questions involved up for review in an appellate court. It should at any rate be said that so smooth and satisfactory have the workings of the new combination proved that there is a general feeling in railroad circles that its advantages should not be lost even if an appellate court should decide against the present form of the organization. The influence of the Joint Traffic Association has, indeed, not been confined to the trunk lines alone. The example it presents is not lost on the railroads of other sections. Something of the same nature has been tried by the southwestern roads, and the promptitude with which the granger lines have just suppressed an incipient outbreak of rate cutting was so unusual as to be suggestive of influences of a novel character, having made the western railroad managers ready to listen to reason and the dictates of sound business policy. Reference has been made in these columns to the wider scope which it has been suggested might be given to the workings of the plan by extending it over all the roads between the lakes and the gulf, though this must necessarily be delayed till the legal status of the organization has been finally established. Finally, we have increasing testimony from the leading railroad men of the country, which is voiced in the declaration of the president of one of the chief trunk lines, not only that the association is the most successful attempt yet made to introduce a reign of settled order in the American railroad world, but that, in his opinion, the highest duty railroad managers owe to their stockholders and the public is to work earnestly for the maintenance of the agreement and the enforcement of the Interstate Commerce law, which it involves.

The latter feature of the Joint Traffic Association makes the effort of the government's law department to have it declared invalid appear a somewhat strange proceeding. One of the chief evils which the compact was designed to stop, and which the experience of the last five months with its workings would appear to show that it has been measurably successful in suppressing, was the constant evasion of the law in regard to discrimination and underhand rate cutting. The railroads themselves have now provided machinery to secure the enforcement of the law more completely and vigorously than legislators had ever been able to do. It affords stability in rates, which is more important to the community than any mere lowness of charges, and ends the reckless competition that has been wasting the income, destroying the property of owners of railroad properties, and discrediting the character of railroad management. The essential features of the agreement are that each of the leading roads shall have a regular representative in a board of managers constantly in session, that dissent from the action of the board shall be valid only when formally taken by the directors of the road, that a two-thirds vote shall always prevail, and that unsolvable questions shall be promptly arbitrated by a committee constantly at the managers' call. Its simplicity is what commends it to the railroad men. In fact, it demonstrates that rates can be maintained and inordinate competition checked. Whatever the eventual outcome of the litigation may be, it would seem that the interests of the public and of the owners of railroad property and securities would be best served by its maintenance, even in a modified form, if on a review of the decision just rendered such a course should be rendered necessary.

NEUTRALITY LAWS AND FILIBUSTERING EXPEDITIONS.

A decision construing the neutrality laws of the United States has been rendered by the Supreme Court of the United States in the case of the United States vs. Wiborg and others. This is the case arising out of the expedition of the Horsa, which was recently advanced for the purpose of securing a speedy construction of our neutrality laws and their effect in preventing filibustering expeditions against friendly powers. The principal defendant, Wiborg, was the captain of the Horsa, which was a Danish vessel, employed by an American firm in the transportation of fruit. He and his mates were tried in the United States court at Philadelphia for violating the neutrality laws in attempting to land arms surreptitiously in Cuba. They were convicted of the offense charged, and this conviction has been affirmed by the Supreme Court of the United States as to the captain, but reversed as to the mates, partly on the evidence of the captain himself.

In passing on the question as to the fact of a violation of the neutrality laws, the chief justice, who read the opinion of the court, said that a body of men went on board a tug loaded with arms; were taken by it thirty or forty miles out to sea; met a steamer outside the three-mile limit by prior arrangement; boarded her with the arms, opened the boxes and distributed the arms among themselves; drilled to some extent; were apparently officered; and then, as preconcerted, disembarked to effect an armed landing on the coast of Cuba. The men and the arms and ammunition came together; the arms and ammunition were under control of the men; the elements of the expedition were not only "capable of proximate combination into an organized whole," but were combined or in process of combination; there was concert of action; they had their own pilot to the common destination; they landed themselves and their munitions of war together by their own efforts. It may be that they intended to separate when they reached the insurgent headquarters, but the evidence tended to show that until that time they intended to stand together and defend themselves if necessary. From that evidence, the chief justice said, the jury had a right to find that this was a military expedition or enterprise under the statute, and the court below properly instructed them on the subject.

As to the captain's knowledge of the facts, the court held that there could be no question; but as to the defendants, Petersen and Johansen, it was held that the case stood on a different ground. These men were the mates of the vessel, who proceeded upon the voyage under the captain's orders. This, the court said, would not excuse them if there was proof of guilty knowledge or participation on their part in assisting a military expedition or enterprise when they left Philadelphia. The court held, however, that adequate proof to that effect was not shown by the record, and that as the case stood the jury should have been instructed to acquit them. The captain testified that the mates "had nothing to do with this ship or with its business. They listened to my orders; they were under my orders. I was master of that vessel. I am responsible for all that was done." The order he received to go north and await orders beyond the three-mile limit does not appear to have been communicated to them, and whatever they must have known after the Horsa was boarded off Barnegat, there was nothing sufficiently justifying a presumption of knowledge when the vessel left the wharf. As to them, therefore, the conviction was reversed, though as to the captain it was sustained.

THE POSITION OF COTTON.

With the close of May the third quarter of the cotton season of 1895–96 ends, and the practical results of the crop movement, which will not be completed until August 31, can be foreshadowed. As a general thing the outturn of the cotton crop has disappointed a majority of the estimators of last November and December, in that a yield considerably in excess of that then predicted has already shown itself, while there still remain three full months of the cotton year to elapse. A number of the estimates published toward the close of 1895 pointed to a yield of about 6,500,000 bales. Examples of this may be cited in the case of the government estimate, popularly regarded as 6,375,000 bales; the Latham, Alexander & Co. estimate, 6,450,000 bales, and one of Neill Brothers' several estimates, 6,500,000 bales. An average of the guesses made on the New York Cotton Exchange, 7,025,000 bales, bids fair to come very near the mark, but the individual estimates themselves naturally varied widely.

The total quantity of cotton which came into sight between September 1, 1895, and May 22, 1896 (8 months and 22 days), was 6,792,000 bales, a decrease of 29.5 per cent. from last year, a falling off of 6.3 per cent. from the preceding year, and an increase of 6.6 per cent. over the amount in sight at that date in 1893. Last year's crop of cotton was 9,901,000 bales, and the amount which came into sight after this date last year was 2⅔ per cent. of the crop, or 264,000 bales. On the basis of a similar movement from now on to the close of this cotton year, the yield the present season will aggregate about 7,036,000 bales. It is important to observe that the movement from May 1 to May 22 this year is considerably in excess of a year ago, so that a maintenance of the percentage of excess in May this year over last (25 per cent.) would give a movement during the rest of this season of 330,000 bales, pointing to a total yield of 7,122,000 bales. On the basis of the recent crop movement, it therefore seems probable the yield this season will be equal to, if not in excess of, 7,100,000 bales, or about 28 per cent. less than a year ago, and about 600,000 bales in excess of estimates prevailing last fall and winter.

Of course the decrease in yield has been accompanied by a corresponding falling off in most of the channels through which the crop seeks an outlet to market. Port receipts to May 22 this season fell off 35 per cent. from a year ago, while the overland movement to mills fell off only 22.3 per cent. The total stock of cotton at ports and interior counted towns on September 1 this season was 309,954 bales, which, added to the amount coming into sight since September 1—6,792,000 bales—makes the total supply this season 7,102,167 bales, against 9,872,239 bales a year ago. The following table shows the distribution, domestic and foreign, as estimated by the New Orleans Cotton Exchange:

	This year.		*Last year.*	
Exports to Great Britain	2,107,782		3,247,442	
France	455,115		764,631	
Continent, etc	1,676,480		2,358,817	
Channel	....		....	
Total exports		4,239,377		6,370,890
Am. spinners' takings—				
North	1,525,468		2,058,353	
South	804,073		746,640	
Total domestic spinners' takings		2,329,541		2,804,996
Burnt		2,151		39,969
Stock at U. S. ports May 22	370,431		550,514	
Stock at interior towns	160,667		106,870	
Tot. American stocks		531,098		657,384
Total distribution		7,102,167		9,873,239

Our shipments to Great Britain fell off 35 per cent. from last season; shipments to France, 40 per cent., and shipments to the continent, 28 per cent. Perhaps the sharpest contrast is that between the decrease of 26 per cent. in takings by northern spinners and the increase of 8 per cent. in southern takings. It is worth noting that the total stocks of cotton at American ports and interior towns on May 22 was 531,000 bales, against 657,000 bales a year ago, a decrease of 19 per cent.

This strength in the statistical position is not confined to this country, but is also true of the world's immediate cotton supply as a whole, the strength of this position, in fact, furnishing the reason for the recent steadiness of values in the face of good weather for the growing crop, whose acreage, it is conceded, will be heavily increased. A forecast of this increase given by the Department of Agriculture places it at about 15 per cent., which will probably be accepted till complete reports are made early in June. While the present outlook favors an enlarged yield, the supply of cotton in the markets of the world is 27 per cent., or about 1,000,000 bales, smaller than a year ago, so that a sort of balance has been established which bids fair to rule till more exact information about the crop is received, or until the outlook for trade generally is altered.

Cotton at New York sells at 8c., a drop of ¼c. from a week ago, against 7⅜c. a year ago, showing that some of the strength of the statistical position has been imparted to prices. Ellison's estimates of British requirements during the balance of the season would leave a stock of only 277,000, or at most 377,000, bales in Liverpool on September 30 this year, against 899,000 bales a year ago, so that whatever the outturn of the crop now growing, the maintenance of prices of old crop cotton seems not unlikely.

MANUFACTURING SITES AND PROSPECTS.

In a recent copy of *Engineering News* is found a thoughtful and instructive article on "The Choice of Location for Manufacturing Plants." In addition to an analysis of the present industrial situation, an outlook is offered concerning the probable future of our leading manufacturing industries. There are also considered in detail points involved in determining on locations for new manufacturing plants.

The United States will ere long enter upon an era of great development of manufacturing equal to, if not exceeding, that which took place in the three years preceding 1893. This opinion is offered in spite of the dubious outlook at present, with a pending presidential election and the necessity for sound money and revenue legislation. Present conditions are only temporary, and when the existing depression is ended it will be followed by an industrial revival.

It requires no special facilities to realize that the bulk of the workingmen of the country are employed, and that the actual wealth of the country, measured in products, is increasing. The agricultural community, as a whole, has been doing better than in one or two previous years, while the products of iron and steel, notwithstanding dullness and lack of demand, are of large volume. The outputs of coal, copper and other minerals and metals are heavy, and population, as well as immigration, continues to increase. These facts are to be considered in the face of existing timidity of capital and the piling up of funds at financial centers because of doubt as to the nature of investments, in view of the uncertainty as to the finances of the country. Increases specified must ultimately create a heavier demand for manufactured goods, and when this is made plain capital will flow towards industrial investments. The consumption of manufactured articles since 1890 has probably run ahead of the growth in population and the consumption of agricultural products, and the past year or two has shown the natural reaction.

Necessary conditions for success in establishing a manufacturing plant are described as: 1. Abundant capital; 2, good location; 3, the most modern machinery, and 4, good management. With demand active and prices correspondingly firm, one or two—sometimes only one—of these conditions will suffice to make an enterprise profitable; but during a period of depression it is believed all four are needed to secure a profit or maintain an existence. Abundant illustrations of the practical failure of elaborate manufacturing plants during the past fifteen or twenty years through ignoring one or more of the conditions mentioned are cited, and it is pointed out that even now competition in certain industrial lines, some of which have gone nearer the source of supply of raw material, indicates that readjustment is taking place on a considerable scale.

In considering the question of location of a new manufacturing plant, however, the points involved are more numerous. First, and perhaps least important, is nearness to residence of the owners, the importance of which is declared to be the necessity for a constant and personal interest on the part of the proprietors in the management of the works. The paramount consideration a score of years ago was the cost of freight on raw material to the works and on the finished product to markets. This naturally sent manufacturing plants to railroad centers, where advantage could be taken in the matter of rates of competition between competing lines; but it is alleged "the much-maligned Interstate Commerce law has changed all this. The long and short haul clause has put a permanent stop to the practice by the railroads of bleeding its local shippers," and it is therefore thought there are many reasons to-day why the location in a small town served by a single railroad company is preferable to one at the more important railroad center, largely because of the facility in securing cars. The cost of motive power, which some years ago was a most important consideration, is now declared less so, except in a few industries, while the labor question is a most important one with respect to choice of location for manufacturing enterprises. The prevalence of strikes in certain industrial centers during the last decade has had much to do with driving factories and mills to small towns where there are few other industries, to avoid the violence and interruption which have at times been an outgrowth of labor troubles. The tendency in the past to locate factories and mills in cities rather than in small centers or country towns is less conspicuous than heretofore, and the opinion is offered that in the future former tendencies may be fully reversed, an advantage being low cost of land, cartage, and the growing use of electric transmission at small towns. It will certainly prove a boon from a social point of view if the manifest tendency of population to the cities is checked, even to this extent. In discussing the concentration of industries, such as the manufacture of shoes at Lynn, Haverhill and Brockton, paper at Holyoke, cotton at Fall River, agricultural implements at Springfield, Ohio, furniture at Grand Rapids, Mich., and silk at Paterson, the general principle is laid down that if a large establishment with ample capital is to be established at the present day, "there is very little advantage in locating in a town or city devoted to that particular industry, provided another site has equal or better facilities" of the character specified above. A small establishment, however, is said to do best in a town devoted to its specialty.

The conclusion is drawn that the present tendency is for manufacturing industries to spread themselves more generally over the country, and that each section is likely to establish its own manufacturing industries more and more, so far as local conditions and the supply of raw material will permit. The days when the manufacturing industry of the United States was centered in the New England and middle states have evidently gone, never to return.

ELEVATED RAILROAD PROSPECTS.

The most immediate effect of last week's decision of the appellate division in the New York Supreme Court upsetting the plans of the New York Rapid Transit Commission for an underground road was to improve the position of the Manhattan (Elevated) Railroad Company, both in the eyes of the metropolitan public and in the stock market. The rise in the Stock Exchange quotation for the company's shares from the neighborhood of par to about 107 in a few days was only one of the manifestations in this connection. More important, both to the company and the community in New York, is the prospect thus created that the Manhattan and its managers will take up in earnest the opportunity thus presented for extending the lines of the system and improving the facilities it already possesses. It cannot be denied that the existing competition of the surface cable lines is the cause of the recent drop in Manhattan stock, rather than any fear of reduction of its earning power from the prospective competition of a new underground system of transportation. Nevertheless, any examination whatever of the subject suggests the idea that the necessity of the situation is an expansion of the facilities which the elevated now possesses, sufficient to afford quick and effective transportation between the lower and the upper portions of the city. Extensions in the upper and less thickly inhabited portions both of the existing municipality and the area north of the Harlem river, which is to be included within the boundaries of the Greater New York, can do little real good. The question is both an engineering and a financial problem, the latter, in consequence of the liability of the company to damages to property owners on the lines of its structure, being of the utmost importance. According to Mr. Russell Sage, one of the leading owners and directors of the Manhattan, the company has thus far paid out on account of these land damages the not inconsiderable sum of $9,000,000. It will be readily appreciated that any further work, either in the way of extending, double-decking, or providing third tracks throughout the existing structure, will have to take this into account. It is, therefore, easy to understand that Mr. Sage, with his well-known carefulness, would like to have the city assume the cost of new construction, bear the land damages and lease the additional road to the existing corporation.

The practical result of the matter is that the Manhattan has appointed a committee, consisting of Messrs. Gould, Sage and R. M. Galloway, to consider the subject of increased rapid transit facilities, and to confer with the Rapid Transit Commission and the city authorities. The outcome of these deliberations will be awaited with interest.

COMPANY PROMOTION ABROAD.

Excessively high prices for "home investments" does not, apparently, check the demand of the British public for them. The cable brings reports that this week, when the London stock market reopened after the Whitsuntide holiday, British rails, notwithstanding the exceedingly advanced prices at which they sell, continued to be the sole feature of the market. South African gold-mining shares are out of favor for obvious reasons. The "Westralians" have never secured a firm footing, and suffer in sympathy with "Kaffirs." Foreign government obligations have never recovered from the shock of the Argentine downfall, and "Americans" of all classes cannot hope to become the object of real attention on the part of the English investing and speculating public so long as our currency situation casts a shadow of doubt. Meantime, the accumulation of idle funds in the hands of the British public continues. The existing proportions of this investment fund have never been equaled in the past. The extreme prices to which consols, British rails and other local securities have been carried are an evidence of this fact. It may be observed, however, that such a situation affords little chance for speculative activity, and, as a consequence, the London market, in its anxiety to find an outlet for the investment fund at its command, again affords a fine field for the ingenuity and skill of the company promoter. The result is an enormous crop of undertakings of all sorts in corporate form, which are now being offered to the English public, and, judging from the activity of the promoting class, are finding a certain measure of success. The advertising columns of the press there, both general and financial, are given up

almost entirely to announcements of new flotations and public subscriptions, and while real, honest criticism of the schemes is wanting, there is no lack of stories as to the enormous profits which the promoters are in some cases reaping, or of complaint that the anxiety of the public to find employment for its money is affording chances to men whose morals and methods do not differ essentially from those of the *chevalier d'industrie*.

This new outbreak of the industrial stock-jobbing fever in London is interesting, because it points to the fact that there is an enormous and active demand for investments and for speculative chances as well, which would unquestionably find an outlet in the United States above all other countries if the uncertainty of our currency situation did not impose a check. The impetus that such an influx of capital would give to all branches of business here is obvious, and it is needless to dwell on this branch of the subject. At the same time the movement is interesting in itself. Its character and the class of prospective values in which it exhibits its force can be illustrated by reference to the current issues of almost any of the London papers. For this purpose the numbers of the London *Statist* and *Economist* of May 16 may be taken. They contains advertisements and notices of over thirty-five new issues and company flotations put out in one week. The united capital thus offered to the public is nearly £7,000,000, making a total as per the record compiled by the *Economist* of such offerings since January 1, 1896, of £51,000,000, against £38,000,000 in the corresponding portion of 1895, £19,000,000 in 1894, and £20,000,000 in 1893. In the whole of 1895 the offerings amounted to £104,000,000, which figure was, of course, swollen by the creation of an enormous number of South African and Westralian gold-mining schemes. It is worth noting that in the year 1893 the total offers to the public were only £49,000,000, so that the first five months of 1896 have been more fertile in this respect than the whole of 1893. Taking the whole list for the week in question as set forth in the journals to which reference has been made, it is of interest to note that two issues, the New York city 3½ bonds for $4,039,000 (£807,000) and $4,000,000 of 3½ per cent. State of Massachusetts bonds, represent this country. There are also $3,000,000 Pittsburgh, Cincinnati, Chicago & St. Louis Railway 4 per cent. consolidated mortgage bonds, and a small amount of debentures issued by a small English municipality.

Among other securities presented for the appreciation of the financial and investing section of the British public, the most important place is filled by breweries, distilleries, or what Lombard street elegantly entitles "group-shops"—that is, the capitalizing of retail dry goods and liquor establishments. Bicycles and tires are another important division, and the mines offered in this way, which would rank as third in point of importance, are all West Australian ventures. The remainder constitute a most variegated assortment of industrials, embracing electrical, gas and incandescent lighting, artificial silk, paper, horseless carriages and nitrates. The whole constitutes an interesting commentary on what presumably meets with the approval of the owners of the existing vast accumulation of idle capital in Great Britain, and should awaken reflection as to what would be the effect if only a tithe of this demand could be attracted toward the mining, industrial and commercial possibilities which this country offers.

WHEAT PRICES IN THE UNITED STATES AND ENGLAND.

To the Editor of BRADSTREET'S:

SIR—Accepting (as I have no means of testing them) Mr. Farquhar's conversion of currency prices for wheat to gold prices for certain periods, I cannot admit that they do more than render the case presented by me a little less striking. When Mr. Farquhar says that the corrected figures leave no basis for my assertion, and yet admits that a great deal of the saving ascribable to reduced cost of transportation has been lost to the American wheat grower, he contradicts himself, for my case is that reductions in transport charges do not nearly equal the reduction in the English price of wheat.

But let us take only the figures from 1879–82 inclusive, as the prices are all on a gold basis for that and subsequent periods, and it was during and after that period that the quoted expansion of American railways and the most striking improvement in marine engines took place. I did not give the percentage falls for the United States of America and England from periods later than 1875–78, but I now present them:

	Cents		
Periods.	Farm prices, U. S.	Official prices, England.	Differences.
1879–82	103.3	134	30.7
1883–86	75.4	106	30.5
1887–90	77.2	94	16.8
1891–94	62.3	87	24.7

	—Fall, per cent.— United States.	England.
1879–82 to 1891–94	40.0	35.1
1883–86 to 1891–94	17.4	18.0
1887–90 to 1891–94	19.3	7.4

The reduction of only 6c. a bushel in the difference, comparing the last period with the first, indicates the extent to which saving in transport expenses counts in the fall in the English price.

Then look at the percentage falls. From the first period to the last the fall in the United States has been nearly 5 per cent. greater than in England, while it has been very nearly the same since 1883–86, and nearly 12 per cent. more since 1887–90. The explanation that the bulk of the wheat is brought from more distant tracts of country than formerly does not touch my case. I simply contend that, no matter what the explanation may be, saving in transport charges accounts for only a proportionately small proportion of the fall in the English price of wheat. WILLIAM E. BEAR.

Highgate, London, May 18.

WHEAT CONSUMPTION.

To the Editor of BRADSTREET'S:

SIR—I have read with interest the results of your investigation concerning the consumption of wheat. The facts reported correspond very closely with those obtained in my original investigation eighteen years ago. A safe average, however, can never be made on the basis of returns of one person to every two thousand of the population. In this case the defectiveness of the average is apparent from the absence of returns representing millions of the population of low wheat consumption. Consumption in hotels and public institutions, and in the well-to-do class of city families, where servants are largely in control, is notoriously wasteful.

I will not undertake an analysis of these differences in detail, but simply refer to one or two classes of low consumption. There are millions of blacks in the south, not servants in white families or living in towns, who use cornmeal for bread exclusively, or almost entirely. Quite a large proportion of the white people in southern country life use a very limited amount of wheat flour, a barrel often sufficing for the "flour doings" of a family for a year. I found two-thirds of a barrel ample as an average of the entire population for a large district, comprising many states. The average is greater now, but certainly very much less than a barrel. When I obtained the average of 4⅔ bushels of wheat for men, women, children and babies, black and white, in the United States, I found whole states in the central wheat-growing west and prosperous northern Atlantic states averaging 5 bushels and over; in fact, making an average for half of the country very nearly as large as the 5⅜ bushels you obtain from selected cases of consumption in towns.

An assumed average as large as this can only be accepted by discrediting the official estimates, state and national, by at least 15 per cent., and also the census returns of production in all the past by a difference nearly as large, an assumption which I cannot regard as reasonable, and a report of which is not even warranted by the character and class of returns which you present. J. R. DODGE.

Washington, May 23.

FOREIGN TRADE OF JAPAN.

A report of considerable interest on the foreign trade of Japan has been prepared by Mr. Longford, the British vice-consul in Tokio. This report is transmitted with a communication from Sir Ernest Satow, the British minister in Japan, who directs the attention of British manufacturers to the present period of commercial activity in Japan, because of the great expansion in the volume of the foreign trade of that country in recent years, the increasing wealth of the people, the rapid development of manufacturing industries, and more especially the growing demand which the next few years are likely to produce for all kinds of metals, machinery, war material and ships, as well as for the ordinary staples of trade. With the conclusion of peace, as is known, a revival of industry and prosperity speedily took place, which soon surpassed anything ever experienced in Japan before. The demand for luxuries of every kind increased, prices rose, the carrying capacity of the railways was taxed to the utmost; industries of all sorts sprang up; what appeared a wild outburst of speculation took place, but the money still seems to flow in abundance for all enterprises. Wages in all classes of labor have risen, and the lower classes have a higher standard of living than ever they had before.

From statistics given it appears that the total value of the foreign trade of Japan last year was £28,150,735, of which the imports were £13,526,710 and the exports £14,624,025. The British share of the whole trade was £10,609,167, the United States coming next with £6,819,422 (mainly Japanese produce), then China with £3,283,921, France £3,218,452, and Germany £1,636,121. Special mention is made of the very rapid increase in the trade with India. The trade in raw cotton is increasing very rapidly, and the Indian article is growing in favor. Of 182,000,000 pounds of cotton used by the Japanese mills last year over 81,000,000 came from China and 72,000,000 from India. The quality of the Chinese cotton has caused much dissatisfaction. There was a continuous demand for railway material last year, and all rails for permanent way were obtained from England, but light rails for portable railways were generally obtained from Belgium. Pig iron is supplied exclusively by England; bar, plate and sheet iron only by Belgium and Germany. The better classes of steel go from England; but it is declared to be now evident that British makers of steel rails must in future reckon with German and American competition.

RAILROADS IN CHINA.

Although definite information on the subject is scanty, the news that the Chinese government is now engaged in constructing several railroad lines in the empire is a matter of considerable interest. It would seem that these enterprises are the work of China's only capable statesman, Li Hung Chang, and it is a further tribute to his shrewdness, as well as a disappointment to foreign concession hunters, that one of the provisions under which the roads are to be built is that the capital shall be Chinese, or at least be nominally supplied by Chinese subjects. The engineers are British, and it is worthy of note that France failed to score a point in regard to the employment of engineers of French nationality, notwithstanding her ostentatious assistance in placing the recent Chinese loan.

According to the London *Financial News*, which prints in a recent number an extended examination of the matter, there are three railway lines in progress or under consideration: "A line from Canton to Pekin—a grand trunk railway it is called—is referred to in Sir N. O'Connor's last published report, and in that connection it is stated that Li Hung Chang was establishing large iron works at Nanking, to supplement those already in existence at Hanyang, for the supply of the material for the Canton-Pekin undertaking. Pekin is the starting point of two of the three new lines, which are described as constituting a railway programme. One would run to Tientsin, and its cost is to be a charge on the finances of the Province of Chili, a country of nearly 59,000 square miles, with a population of 28,000,000. A second railway is authorized from Pekin to Hankow, on the Yangtze, at a cost of nearly £2,000,000; but the imperial edict is that this line shall not be built with public money, but out of the sum the Emperor's wealthy subjects are disposed to invest in its construction in the hope of future gain. The third line would run from Soochow to Shanghai, a distance of 60 miles. Its estimated cost is 2,000,000 taels, and of the three this route seems to promise the best results from a commercial point of view. But this is the pet scheme of Chan Chih Tung, formerly viceroy of Nanking. He is the nearest approach to a competitor of Li Hung Chang known to the Yamen. He claims that there are, or were, 2,500,000 taels in the official coffers, ready for the work when it is commenced. Whether this statement be true or not scarcely matters, inasmuch as it is improbable that Li Hung Chang, now once more in favor, will advance his rival's prospects at the expense of his own interest in the railways from Pekin to Tientsin and Hankow."

The same journal proceeds to say, in commenting upon the matter: "It is impossible to doubt that, as the result of the war with Japan, China has undergone a galvanic shock which may lead to a sharp awakening of her ancient spirit and latent

energies. The shock, however, was felt more at the head, in Pekin, than in the extremities. Sir Nicholas O'Connor, in trying to account for the singularly rapid revival of trade last year, points out that in the conflict with Japan the usual calamities of a campaign were absent in China. No ports were blockaded; 'there was no harassing of the merchants; no seizing or overhauling of their ships (with a few exceptions); in fact, no interference whatever with the ordinary course of business.' The country generally, except on its eastern verge and on the Manchurian border, may be taken to have slept in the bliss of ignorance while Pekin was frantic with alarms. This is a consideration which, in view of the Shanghai-Woosung experiment, should be kept in mind in estimating the possibilities of the railway projects which have been put forward as though the imperial fiat were enough of itself to remove every obstacle from the road of the railway engineer. These projects are three in number, and they seem well devised—if they can be carried out—to meet the primary wants of that southeast corner of China (the capital included) which is alike most populous and nearest to the sea."

EDITORIAL NOTES.

Details of stocks of wheat available in the United States and Canada last Saturday, as reported to this journal, are as follows:

It is of interest to read in London exchanges that at the Institute of Civil Engineers, which met recently at that city, attention was very generally attracted by two papers, one on "American and English Methods of Manufacturing Steel Plates," by Mr. Jeremiah Head, and the other on "Four American Rolling Mills," by Mr. Samuel R. T. Wellman, of Cleveland, Ohio. One English newspaper said the papers gave an admirable idea of the differences of English and American practice, and prove that, "although the Americans are in some respects ahead of us in reference to economical methods and appliances, they are not so far ahead as some of us suppose."

It is related that Mr. Head admits that the best performances in plate-rolling in the United States do not differ greatly from the best performances in the United Kingdom, and even goes so far as to add that "the modern English plate-shears, actuated by a pair of cylinders without a fly-wheel, is an improvement on the existing American practice." On the other hand, however, he thinks the American standard plate mill is superior to that usually employed in the United Kingdom, "because it admits of a quicker reduction in the thickness of the ingots or blooms submitted to it, a more economical engine, and less intermediate gearing." He also states that "by the extensive adoption of labor-saving appliances (more especially electric motors), and by keeping the work in progress almost continually on wheels, or power-driven rollers, labor is minimized in America to an extent seldom reached in Great Britain." These conclusions seem to satisfy in large part the English critics, because, as one of them says, "no one has ever doubted that the Americans were well to the front in economy of production, and they were never more so than they are to-day, so that to be equal to them is to be abreast of the most excellent practice extant."

Evidently there was more in Mr. Wellman's paper, for the London *Iron and Steel Trades Review*, in discussing the production of American rolling mills, remarks that "some of their outputs are truly phenomenal. At the South Works of the Illinois Steel Company, for example, 1,025 tons of rails have been rolled in one mill in twelve hours and 1,829 tons in twenty-four hours. Again, at the Edgar-Thomson Works, the rail mill produced in one month as much as 36,300 tons of rails, while at Joliet the remodeled rail mill, which is also used to manufacture billets, 27,003 tons of billets have been produced in a month. The economy of labor accomplished in some of these mills is simply marvelous. At Joliet the total number of men employed about furnaces and mill is stated to be only thirty-five per turn of twelve hours, so that the average output per man is 14.28 tons. Allowing six shifts per week for the whole year, this would give the enormous production of 4,455.36 tons per workman per annum. Of course, this remarkable result is mainly accomplished by the use of the most perfect and highly economical labor-saving appliances, which for the most part are automatic, and in the working of which electricity appears to have a much more prominent place than it has in English practice."

Payments on account of sugar-bounty claims under the act of 1895 will have to be prorated, or an additional appropriation will have to be made. The claims on account of cane, beet and sorghum sugar come from seven states, number 502, and aggregate in amount $6,111,500, whereas the appropriations only amount to $5,000,000. The claims on account of other kinds of sugar amount to $238,280, of which a little more than half ($121,779) are on account of maple sugar, for which claims were presented from nine states. Claims on sugars other than maple come from six states, and aggregate $116,501. Inasmuch as the validity of the appropriation for the bounties has been affirmed by the Supreme Court, there is no obstacle in the way of the payment of the claims, and this has been promptly recognized by Comptroller Bowler, but it will probably be a month before any of the payments will be made in the regular Treasury routine.

Recent cable advices from Berlin indicate that considerable interest is felt in Germany concerning the consequences to that country of the approaching presidential election in the United States. It is hardly necessary to add that this is based on the outlook for Mr. McKinley's candidacy for the presidency on the Republican ticket. It would appear that Germany regards unfavorably any action here which might point to a revival of extreme protection. Among the comments of the German press none is calculated to attract more attention than the following, from the *Reichsanzeiger*, an official publication which prints a warning to Germans against emigrating to America, the warning being especially directed to clerks, teachers, officials, students, officers, governesses, nurses and farmers, all of whom would be likely to be possessed of some money, and "they are particularly cautioned against the danger of purchasing land in the United States which, the paper says, is easily obtained. Valueless land or land to which titles of possession are not in accord with the American conditions form the subjects of the leading articles in a great many German newspapers at present, and the general drift of the writings indicate that there are widespread fears of an existing or threatened competition between American and German products. For example, the *Landwirthschaftliche Beilage*, in reporting the great success of the poultry and pigeon show held in New York in February last, expresses apprehension that there will soon be a great influx of American eggs into Germany." The most vital point to American interests in this unfounded charge lies in the attack on land titles here. It is well understood that the titles referred to are, in large part, those given by some of the great Pacific railroad companies, particularly those which have undergone reorganization. Nothing is better known by those who have given the subject attention than that such titles are amply protected, that they have been maintained in the past and that they will be in the future. These railroad companies have the highest motive for securing land titles to those who may purchase tracts from them, that of self-interest. If there had ever been any cause for questioning this in the past, the unfounded charge of the Berlin newspaper named would be susceptible of a more charitable interpretation.

One of the decisions handed down by the Supreme Court on Monday last was in the case of the Union Pacific Railroad Company vs. the Chicago & Rock Island and Chicago, Milwaukee & St. Paul Railroad companies, involving contracts between the two last-named companies and the Union Pacific as to the right to use the tracks of the bridge across the Missouri river at Omaha and which the Union Pacific sought to have invalidated, on the ground that the contract was made by the officials of a branch line. One of the points raised was that it was not within the corporate powers of the parties to make such contracts, but the court held on this point that there was nothing in the charter of the Union Pacific Company to prohibit such an arrangement as the one in controversy, unless by implication, and as by it the public interest was served, and that company reached its own lines by a shorter route and accommodated its own through freight and travel, the court was not prepared to hold that it was invalid. The opinion also held that the contracts were duly authorized by the Union Pacific, and that they were such contracts as a court of equity can specifically enforce, thus affirming the decree of the Circuit Court of Appeals for the Eighth Circuit on all points, the decision being against the Union Pacific. The court said that the contracts in question were in proper form, signed and executed by the proper executive officers and attested by the corporate seals. They were approved and authorized by the executive committee, which committee had all the powers of the board, and were ratified, approved and confirmed by the stockholders at their regular meeting. This, the court said, was sufficient to bind the company, although no formal action by the board was had.

The Minneapolis *Market Record* points out that more than twice as much wheat has been taken from the visible supply this cereal year for domestic consumption as last year. The amount so taken from the 1895 crop is about 64,000,000 bushels, while the amount last year was about 31,000,000 bushels. Yet we started in August 1 with 38,000,000 bushels, against 60,000,000 bushels the previous year. We have received in the visible since August 1, 176,000,000 bushels, against 137,000,000 bushels from the previous crop.

CURRENT BUSINESS NEWS.

Industrial.

The Baldwin Locomotive Works "has closed a contract with the Lehigh Valley Railroad Company for the construction of twenty-five locomotives."

The discovery of gold in paying quantities a short time ago at Heflin, Ala., and at Villa Rica, Ga., has caused numerous prospectors to go to work in both fields. Now it has become known that "a rich find" had been made at a point twenty miles southwest of Chattanooga, Tenn.

The *Northwestern Lumberman* says: "There is nothing plainer than that the present supply of coarse sawmill product is greater than can be absorbed by the demand. This proposition applies to pine more than to the hard woods, but it is measurably true of all kinds of lumber. It is as plain as a pikestaff, also, that because there is too much coarse lumber, and too much pressure to sell it, prices are constantly forced below the profit-yielding limit. High-grade stock now, as always, is good property, and can be held at prices which afford a profit to the producer."

The employees of a cycle-fittings company of Toledo, Ohio, to the number of six hundred, went on strike this week because the company refused to discharge "an objectionable superintendent."

The Amalgamated Association of Iron and Steel Workers has decided to make a demand for a general increase in wages. The demand will affect all union iron mills in the country. Separate demands will be made upon the steel manufacturers, for whom a special wage committee has been appointed. A separate scale will be prepared for all steel plants.

The Watts basic steel plant, at Middleboro, has begun operations, employing 600 men.

A Pittsburgh dispatch says that all the window-glass factories in the country but one will be shut down next Friday for at least three months, and 5,000 men will be affected.

The coal mines along the Monongahela and Youghiogheny rivers have shut down on account of low water. Over 6,000 miners are idle.

Commercial.

An exchange says that such backing as the Illinois Central is giving New Orleans "would be enough to develop a great city," yet it has many other sources of strength. "The gulf movement is increasing in importance."

Galveston's deep-water harbor being a fact, it is announced that the Southern Pacific will run some of its large steamers to that port "if port charges are satisfactory." The time is said to be not much longer from New York to Galveston than to New Orleans, "while the Texas port lands the vessels over 300 miles farther west, giving a considerable advantage to the latter in traffic to and from a large region."

The Philadelphia *Press* says: "Bicycles are receiving what was spent on jewelry, extra clothing, new furniture, musical instruments, as pianos, and the entire range of objects on which families expend the margin they can spare from the necessities of life. All the trades mentioned are suffering and bicycle manufacturers are benefiting."

The income of the Produce Exchange (New York) for the year ending April 30 was $301,195, or $6,802 less than the year before. The expenses were $238,001.57, an increase of $16,208.44. The net profit was $63,193.55.

Bicycles, the *Journal of Commerce* estimates, absorb this year about $60,000,000 in the United States alone.

An auction sale of 8,300 pieces of dress silk, valued at about $25,000, was held at New York on Wednesday and attracted buyers from all parts of the country. The terms offered were very liberal, permitting payment in six months from July 1. The prices, it is declared, were very satisfactory.

Improvement in our foreign shipments of horses continues. During March 3,024 horses were shipped abroad worth nearly $400,000, compared with only 1,315 a year ago. The 17,500 exported during nine months are more than double the total a year ago.

New York Produce Exchange cash sales for the year ending May 1, 1896, are close to $3,000,000,000 in excess of the previous year. This certainly is not a discouraging feature. The exchange has been active in trying to prevent railroad discriminations against New York in the matter of grain rates. "The exchange cannot take too firm a stand in opposition to this willful and unjust diversion of the trade of this port."

The annual report of the New York Cotton Exchange shows that sales for future delivery in the year ending April 30 amounted to 54,690,000 bales, against 32,110,000 in the previous year, and sales of spot cotton to 343,000 bales, against 254,000 bales a year ago.

A notable gathering of representative business men from all sections of the country is to assemble in Philadelphia next week. They will constitute the National Commercial Congress, and their purpose in meeting is to discuss plans looking to outlets for the surplus of American products.

Information has been received at the New York Produce Exchange that the proposed increase from 1s. 6d. to 2s. per ton in the British dockage charges on American flour has been postponed until October 1, and may never be put in force.

In the last nine months 17,000,000 bushels of corn were exported from New York, while 15,000,000 bushels were exported through New Orleans.

A meeting of the Kentucky Distillers' Association will be held in Louisville on June 10. The object of the meeting is to take action toward limiting the production of whisky in Kentucky, or suspending it entirely for several years.

About 500 buyers attended an auction sale of silks at New York Thursday. The sale was held on order of the assignee of the Cutter Manufacturing Company. The bidding was quite spirited at times, and the prices were excellent. The fancy silks were in the most demand.

Financial.

The following securities were sold at auction this week at New York:

75	Shares West Side Construction Company stock, Central Trust Company certificates, 100 per cent. paid (hypothecated)	68%
500	Shores Metropolitan West Side Elevated Railroad Company stock (hypothecated)	21%
$200,000	Metropolitan West Side Elevated Railroad Co. first mortgage 5 per cent. 50-year gold bonds, due 1942 (hypothecated)	70%
1	Share New York Law Institute	$82
40	Shares National Citizens' Bank	130
80	Shares Tradesmen's National Bank	90
10	Shares National Bank of Commerce	205
60	Shares Irving National Bank	141
14	Shares Brooklyn Bank	158
4	Shares Corn Exchange Bank	286
21	Shares Mechanics' National Bank	190¼
35	Shares Seaboard National Bank	173
48	Shares Home Insurance Company	158¾@159
8	Shares Union Trust Company	830
2	Shares United States Trust Company	1,073
12	Shares American Fire Insurance Company	99
140	Shares Trotter and Pacer Company	$20 lot
20	Shares Henry R. Worthington Company preferred	72¼
10	Shares Real Estate Exchange and Auction Room, Limited	70
105	Shares American Bank Note Company	$37.50 per sh.
20	Shares American Typefounders' Company preferred	28½
50	Shares Michigan Peninsular Car Company preferred	48¾
$1,500	Comstock Tunnel Company first mortgage income gold bonds	∎
$4,000	Consumers' Brewing Company 6 per cent. mortgage gold bonds, 1901	101
5	Shares Consumers' Brewing Company	140
490	Shares French Mirror Plate Company	$1.05 per sh.
$4,000	Stuttgart & Arkansas River Railroad first mortgage 5 per cent. gold bonds	60
750	Shares American Double Pick Fabrics Company	$150 lot
$6,500	Long Island Water Supply Company second mortgage 6 per cent. bonds	94
$456	National Cordage Company liquidation certificates	5

There was a meeting of the Clearing House Association of New York on Wednesday "to consider a plan for changing the present method by which country banks remit checks and drafts for collection, with a view of throwing around it safeguards which will protect the New York banks from forgeries."

The Laclede Gas Light Company has declared a semi-annual dividend of 2½ per cent. and an extra dividend of 1 per cent. on its preferred stock, payable June 15.

The Cleveland, Lorain & Wheeling Railroad Company has declared a dividend of 1 per cent. on its preferred stock, payable June 15.

Railroads.

The Pacific Mail Steamship Company reports for the year ending April 30:

	1896.	1895.	1894.
Gross	$4,210,036	$4,087,872	$3,834,092
Operating expenses	3,501,655	3,375,240	3,358,631
Net	$708,381	$712,631	$475,461
Cash on hand	610,439	210,916	93,368

Electric railways evidently are to carry freight as well as passengers, and serve rural communities as well as city and suburban dwellers. An example is found in a line in southwest Missouri between Carthage and Joplin, a distance of about nineteen miles. In a few weeks it is to be extended ten miles to Galena, Kan., making the road about twenty-eight miles long. "It is said freight cars will be put on, with a cheap tariff for farm products."

The Chicago, Milwaukee & St. Paul Railroad reports gross earnings for April of $2,366,590, an increase of $312,407 as compared with the same month of last year, and net $776,197, an increase of $40,409. For the ten months ending April 30 the gross earnings were $27,818,969, an increase of $4,891,559 as compared with the corresponding period of last year, and net $11,321,005, an increase of $2,980,565.

The Allegheny Valley Railroad reports gross earnings for April of $193,123, a decrease of $13,830 as compared with the same month of last year, and net $69,381, a decrease of $20,594. For the four months ending April 30 the gross earnings were $754,984, an increase of $9,061 as compared with the corresponding period of last year, and net $242,721, a decrease of $42,234.

The Central Railroad of New Jersey reports gross earnings for April of $947,807, a decrease of $71,594 as compared with the same month of last year, and net $308,106, a decrease of $93,834. For the four months ending April 30 the gross earnings were $3,802,972, an increase of $97,555 as compared with the corresponding period of last year, and net $1,149,933, a decrease of $126,651.

The Northern Central Railroad reports gross earnings for April of $493,818, a decrease of $16,783 as compared with the same month of last year, and net $138,210, a decrease of $11,029. For the four months ending April 30 the gross earnings were $1,962,762, a decrease of $35,365 as compared with the corresponding period of last year, and net $483,062, a decrease of $100,738.

The Erie Railroad Company reports for April:

	1896.	1895.	Changes.
Gross earnings	$2,389,850	$2,264,080	Inc. $125,770
Operating expenses	1,825,197	1,718,915	Inc. 106,282
Net earnings	$564,653	$545,165	Inc. $19,488
From December 1:			
Gross earnings	$11,807,593	$11,036,070	Inc. $771,523
Operating expenses	9,112,488	8,631,500	Inc. $480,988
Net earnings	$2,695,105	$2,404,570	Inc. $290,535

The Chicago, Burlington & Quincy Railroad reports gross earnings for April of $2,511,759, an increase of $34,249 as compared with the same month of last year, and net $779,174, a decrease of $29,503. For the four months ending April 30 the gross earnings were $10,415,922, an increase of $855,736 as compared with the corresponding period of last year, and net $3,560,705, an increase of $500,600. Fixed charges were $3,520,000, leaving a surplus of $40,705, an increase of $472,417.

The Wabash Railroad reports gross earnings for April of $979,106, an increase of $18,982 as compared with the same month of last year, and net $213,886, an increase of $801. For the ten months ending April 30 the gross earnings were $10,862,438, an increase of $849,534 as compared with the corresponding period of last year, and net $3,153,010, an increase of $603,988.

The Pennsylvania Railroad Company's April statement of comparison of earnings and expenses shows: Lines directly operated—Gross earnings, month of April, decrease $73,200; four months, increase $589,200; expenses, month of April, increase $101,400; four months, increase $648,300; net earnings, month of April, decrease $174,600; four months, decrease $59,100. Lines west of Pittsburgh and Erie, directly operated—Gross earnings, month of April, increase $188,100; four months, increase $522,300; expenses, month of April, decrease, $22,100; four months, increase $365,800; net earnings, month of April, increase $210,200; four months, increase $156,500. All lines east of Pittsburgh and Erie—Gross earnings, month of April, decrease $80,200; four months, increase $639,000; expenses, month of April, increase $140,400; four months, increase $932,400; net earnings, month of April, decrease $220,600; four months, decrease $293 400. All lines west of Pittsburgh and Erie—Gross earnings, month of April, increase $185,300; four months, increase $539,600; expenses, month of April, decrease $40,700; four months, increase $459,900; net earnings, month of April, increase $226,000; four months, increase $79,700.

The all-rail east-bound shipments of dead freight from Chicago last week were 49,305 tons, against 50,797 tons the previous week and 47,213 tons the corresponding week of the previous year.

The Southern Railway reports gross earnings for April of $1,393,097, a decrease of $10,647 as compared with the same month of last year, and net $323,524, an increase of $39,351. For the ten months ending April 30 the gross earnings were $16,377,415, an increase of $1,058,384 as compared with the corresponding period of last year, and net $5,162,326, an increase of $396,056.

The Lake Shore & Michigan Southern Railway Company reports for the quarter ending March 31:

	1896.	1895.	Changes.
Gross earnings	$5,046,870	$4,698,411	Inc. $348,459
Oper. expenses	3,182,514	2,986,537	Inc. 195,977
Net earnings	$1,864,356	$1,711,874	Inc. $152,482
Other income	98,713	92,200	Inc. 6,513
Total income	$1,963,069	$1,804,074	Inc. $158,995
Fixed charges	1,103,713	1,112,200	Dec. 8,487
Surplus	$859,356	$691,873	Inc. $167,483

Cash on hand $1,749,574, and profit and loss surplus $11,850,612.

The Chicago, St. Paul, Minneapolis & Omaha Railroad Company reports gross earnings for April of $506,273, an increase of $39,925 as compared with the same month of last year.

Miscellaneous.

The annual session of the Co-operative Congress, which is being held at Woolwich, has passed a resolution in favor of the formation of a permanent tribunal to settle disputes arising between England, and the United States. A copy of the resolution was communicated to United States Ambassador Bayard, who acknowledged it in a letter expressing his hearty concurrence in the suggestion.

Foreign.

The Paris correspondent of the London *Economist* states that the commission appointed to examine the scheme for a ship canal from the Atlantic to the Mediterranean has decided against it on the ground of the outlay and the small advantage to be derived.

The United States consul at Prague informs the State Department that an International Pharmaceutical Exhibition will be held there from August 15 to September 15 next, and that the attendance of persons in the United States interested in the undertaking is desired.

At the present rate of consumption of copper, which is far in advance of the supply, even greater quantities from the United States might be absorbed in the United Kingdom without inconvenience. "If the manufacturing industries of the States were suddenly to recover, and so draw off part of the American supplies, the predicted copper famine would occur very soon."

A German paper publishes a list of the customs duties on iron and steel contained in the new commercial treaty between Germany and Japan. "The duties to be levied in Japan have, it is stated, been fixed as follows: 10 per cent. on iron wire, steel wire, and thin steel and iron rods; 5 per cent. on pig iron and on rails, whether steel or iron, and 10 per cent. on galvanized ware manufactured from hard steel, on tinplates, and on tubing."

Dr. Bell, "a well-known Canadian scientist, has been delivering a lecture on forestry at the Canadian Institute, Toronto. He states that North America possesses a greater variety of trees than any other country in the world, and nearly one hundred different species are found in Canada east of the Rocky mountains."

The iron industry in southern Russia is rapidly developing, owing to investment of Belgian capital. Although the bulk of the requisite money appears to hail from Belgium, home capital is also being invested in the same undertakings on no small scale. Not only are new works erected, but old ones are bought and extended.

Everywhere in Italy the viticulturists are showing the greatest activity in treating the vines with fungicides so as to prevent a repetition of the losses suffered from this cause in 1895.

During 1895 there were 405 strikes in France, with 45,801 strikers. There were four lockouts, and 617,469 workers' days were lost. Twenty-four per cent. of the strikes were successful and 46 per cent. unsuccessful, the reminder ending in a compromise. There were 126 convictions for intimidation or violence, 77 of which were of Paris omnibus men. There were 29 strikes settled by committees of conciliation or by arbitration.

Beerbohm, London, says: "Meanwhile the wheat trade seems to lie in the shadow of the great French wheat crop which is believed to be imminent, and is apparently deaf to all else. The prospect of lessening supplies from Argentina, and of practically nothing from India and Australia, seems to be overlooked; the trade, in fact, is pursuing its old method of refusing to buy wheat during a warm, dry May. The struggle between buyer and seller, however, is approaching; stocks cannot go on decreasing forever, and the population of the United Kingdom, in spite of lessened appetite for bread, does not consume less than 540,000 quarters of wheat per week.

The Venezuelan government, it is reported, has granted a Richmond, Va., syndicate a concession to manufacture spirits in Venezuela. Importations of machinery and raw materials will be allowed free of customs duties, and in Venezuela there is no internal revenue tax.

Statistics of the foreign trade of Belgium during the first three months of the year show that the exports of iron and steel totaled 147,267 tons, as compared with 96,906 tons in the first quarter of 1895. The increase in the exports was mainly due to rails, girders and sheets.

The strike of the straw plaiters in Rome and province of Florence is said to be alarming.

An international exhibition of machinery, mining appliances, metallurgica processes, etc., will be held at Brisbane, Queensland, Australia, during June, July and August, 1897.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

State Taxation—Federal Bequests.

The Supreme Court of the United States held, in one of the cases decided on Monday, that bequests made to the United States in New York are taxable under the tax laws of that state.

Indiana Tax Law Held Valid.

The Supreme Court of the United States has affirmed the constitutionality of the Indiana tax law of 1891 relating to corporations, in the case of The Western Union Telegraph Company vs. Taggart.

Interest—Note—Contract.

The Kentucky Court of Appeals held, in the recent case of Miller vs. Cavanaugh, that a note payable ten years after date "with interest at the rate of 6 per cent. per annum from —— until paid" bore interest from date and not merely from maturity, and that it was not reasonable to suppose the parties were contracting for interest for a time subsequent to the time fixed for payment, when the law would allow interest from that time without a contract.

Statute of Frauds—Manufacture—Contract

The Supreme Court of Massachusetts held, in the recent case of Brown and Haywood Company vs. Wunder, that a verbal contract for the manufacture of articles of special and peculiar design not suitable for general trade, and for the price of more than $50, is not a contract for the sale of goods and chattels within the statute of frauds, and that a verbal contract to furnish material, and, after performing labor thereon, attach it to the realty as a part of a building in the course of construction, is not a sale of goods or chattels, and is not within said statute.

Master and Servant—Negligence.

The Supreme Court of Minnesota held, in the recent case of Smith vs. E. W. Backus Lumber Company, that a master is liable for his negligence in retaining in his employ an habitually careless or neglectful fellow servant, known to the master to be such, by reason of which negligence the plaintiff was injured; that where the servant complains of such neglect to the master, and he promises to remedy the same, the servant may continue in the employment a reasonable length of time thereafter in expectation that it will be so remedied without assuming the risk, or being guilty of contributory negligence, unless the danger is so apparent, imminent and immediate that a man of ordinary prudence would refuse so to remain, and that what is such reasonable time is ordinarily a question for the jury.

Married Woman—Husband's Creditors.

The Kentucky Court of Appeals held, in the recent case of Farmers' Bank vs. Marshall et al., that where a mercantile and a milling business were each carried on in the name of a firm of which a married woman who was empowered to trade as a feme sole was an ostensible member, but the business was in each case controlled and managed by the husband, who furnished the capital and credit, and was, in fact, the real owner and beneficiary, the husband's creditors were entitled in an action upon a return of no property to subject the property used in the business, after giving to the wife a sum of money which the husband obtained and invested in the business for her, but that there should be first deducted from the amount to be paid to the wife whatever she had received from either firm, and that while the debts of each firm were payable out of the property thereof, it was error, in view of the fraudulent device to hinder and delay the husband's creditors, to direct the payment out of the property of any debts the wife might have contracted upon the faith of her being a feme sole.

Railway—Accident—Negligence.

In the case of Cummings vs. Worcester, Leicester & Spencer Street Railway Company, recently decided by the Supreme Court of Massachusetts, action was brought to recover damages for personal injuries sustained by plaintiff through being struck on the head by a post standing about three feet from the car track, while he was leaning out beyond the platform of the car. The plaintiff excepted to the rulings of the trial judge, who told the jury that if the accident happened in the manner testified to by the plaintiff, it was a question of fact for them whether he was careful or negligent, and that a casual or momentary leaning out, such as would be incident to secure a more comfortable or a safer position, would not necessarily preclude him from recovering. The court sustained this ruling, but said that it was also true "that a street-car passenger may intentionally and deliberately put his head or part of his body outside of or beyond the line of car under such circumstances and in such a manner as to make it plain that in so doing he is not in the exercise of ordinary care, and as to make it unjust not to hold that he assumes the risk, * * * " and that if the plaintiff deliberately leaned out substantially in the manner which defendant's witnesses testified he did, he could not recover for an injury received in consequence of striking his head against a post which had been plainly in sight, while the car was going, a quarter of a mile.

Constitutional Law—Sunday—Barbers.

The Supreme Court of Illinois has rendered a decision in the case of Eden vs. The People, reported in the Chicago *Legal News*, in which it holds that an act of the legislature prohibiting barbers from carrying on their business on Sunday is unconstitutional as discriminating against a single calling or vocation. The court said: "We do not, therefore, think the law was authorized by the police power of the state. If the public welfare of the state demand that all business and all labor of every description, except work of necessity and charity, should cease on Sunday, the first day of the week, and that day shall be kept as a day of rest, the legislature has the power to enact a law requiring all persons to refrain from their ordinary callings on that day (Cooley Con. Lim. 735); and in order that Sunday may be kept as a day of rest, then all will be placed on a perfect equality, and no one can complain of an unjust discrimination. But when the legislature undertakes to single out one class of labor, harmless in itself, and condemn that and that alone, it transcends its legitimate powers, and its action cannot be sustained."

Married Woman—Husband's Creditors.

The Supreme Court of Georgia held, in the recent case of Bell vs. Stewart, that where a wife's money was used by her husband with her consent in part payment for a tract of land, upon an express parol agreement between them that when the land was fully paid for he was to make her a deed to "her pro rata part of the land purchased," and upon his completing payment he took the title to the entire tract in his own name, the wife owned an equitable individual interest in the land, and it was perfectly proper and lawful for the husband to convey to her a portion of the land not greater in value than the amount of her money which went into the purchase; that if this was done in good faith before a particular creditor of the husband obtained a judgment against him, the wife's title was superior to the judgment, although in the creation of the debt upon which this judgment was founded the creditor may have extended credit upon the belief that the entire tract belonged to the husband, it not appearing that the wife had ever said or done anything to mislead the creditor or warrant him in believing that she treated the whole tract as the husband's exclusive property, and it not being shown that she permitted him to use it as such, and that the mere fact that she lived upon the tract of land with her husband and enjoyed it jointly with him would not, under the facts above recited, be sufficient to show that she "permitted him to use the property as his own."

Railroad—Passenger—Assault—Liability.

The Supreme Court of Georgia held, in the recent case of The Georgia Railroad & Banking Company vs. Richmond, that where one who had purchased a railroad ticket intending to take a train about to arrive, but who failed to do so because he did not succeed in getting his baggage checked in time to be placed on that train, left the premises of the railroad company and registered at a hotel, intending to take a train to his destination the next morning, and afterwards, on the day he purchased the ticket, returned to the station to make inquiries about or arrange for the storage or checking of his baggage, he was not at that time a "passenger," but nevertheless had the right to go to the station for the purpose stated, and if he conducted himself properly was entitled to respectful treatment from and immunity from an unlawful assault by the agent while engaged in transacting with him the business mentioned, and such an assault would, under such circumstances, give a right of action against the company. The court held, however, that if the real purpose in returning to the station was not to look after or arrange for the checking of baggage, or to attend to other legitimate business with the agent, but merely to upbraid him for a real or supposed breach of duty occurring at an earlier hour of the day, and a difficulty thereupon ensued, the two met as ordinary citizens, and the railroad company had no concern in what passed between them.

BUSINESS NOTES.

The Siberian Railway.

London *Engineering* says: "From Tscheljabinsk a distance of about 1,280 miles is now being used for traffic, and the favorable effect of the railway upon industry and commerce is already perceptible. The towns along the line increase in size and number of inhabitants, and the imports already comprise articles which were previously unknown. In the principal streets of Tomsk electric light has been, or is just about to be, adopted, and the journey from Moscow to Tomsk can now be compassed in eight days."

Electricity on the Railroads.

The *American Manufacturer* (Pittsburgh) says: "The development of electrical power is making such strides that railroad authorities admit that some of the great systems of the country may within the near future adopt it in place of steam. The master mechanic of the Pennsylvania Railroad is quoted as saying that the successful transmission of electrical power over long lines has practically shown that the great culm piles in the Pennsylvania anthracite regions may be utilized in generating electricity. This opens up an immense field for electrical development. Numerous gentlemen prominent in railway service have confessed quite a change in their opinions during the past few months in regard to the feasibility of the electrical locomotive, and we hear that some of the leading roads are soon to make wide extensions in this direction."

Indian Cotton Exports.

The London *Statist* says: "The export of cotton from Bombay, which was confidently expected a little while ago, has not yet begun, and is not likely to take place now before the monsoon. Indeed, we hear that preparations are already being made for storing the cotton. Evidently the holders are dissatisfied with European prices, and are confident that by keeping back from the market they will be able to sell, either in Bombay itself or in Europe, to greater advantage by-and-by. The refusal to export has naturally weakened exchange, and as the general stagnation in business has lowered rates, it looks now as if money were about to become very cheap, at all events for some months. On the other hand, it is to be recollected that railway building is going on more actively than for some time past, and that may cause a more active demand by-and-by."

Electrical Improvements.

The *Electrical Review* announces that Nikola Tesla has "perfected his vacuum tube system of electric lighting without wires, the possibilities of which he first brought to public notice five years ago in a lecture before the American Institute of Electrical Engineers. This light is whiter, more brilliant and more intense than the arc light, and is produced with a much smaller amount of electrical energy. Tesla further states that his apparatus has been greatly simplified, and he will soon have it ready for practical use." Working on different lines, Thomas A. Edison, according to the *Electrical Review*, has succeeded in developing a new electric lamp or vacuum tube, "by means of which the Roentgen or X rays are turned into pure white light. Edison's new lamp is an ordinary Crookes tube, coated on the interior surface with crystals of a new fluorescent substance which he has discovered, similar to tungstate of calcium. The X rays, in passing through this coating of crystals, are changed to light. Very little heat is generated, and nearly the whole of the electrical energy expended is transformed into light. Mr. Edison believes that there are great possibilities in his discovery."

To Export Anthracite Coal.

The London *Iron and Steel Trades Review* says: "It is a well-known fact that American coal is raised very cheaply, and that American anthracite is not only a cheap but also a valuable domestic fuel, more especially owing to its freedom from smoke. It is announced that a vigorous effort is being made to push the sale of American anthracite in Europe. The possibilities of a fair and remunerative trade in this direction are reported as promising. The introduction of the American stove would, in the long run, it is believed, pioneer the way for the more general use of anthracite. The qualities of this fuel once determined, and its cost giving it a fighting chance in the market, there seems to be a belief that American anthracite will yet become an important factor in the foreign trade of the United States. According to this, inquiries have been set on foot to collect statistics of coal consumption in France, Holland and Germany, methods and rates of transport, and such data as bear on the general situation. The report says that communications with 2,000 shippers of France, Germany and Holland have been opened to elicit information as to ocean freights, storage capacity of vessels, and other matters relative to the projected enterprise. Samples of American anthracite have already been solicited, and in one instance, it is said, from an important steel concern."

English American Investments.

The London *Financial News* says: "A rather curious fact was elicited at yesterday's meeting of the Chicago Packing and Provision Company—namely, that only 11 per cent. of the share capital was held in England, the balance having been acquired by Americans. The English company itself carries on no business, but in 1890 acquired all but six shares of the Chicago company. Since 89 per cent. of the English company's shareholders are now citizens of the United States, it is plain that the Americans have virtually bought the undertaking back, and the utility of a London board is not very clear. On the other hand, in view of the steady decline in the dividends—15 per cent. in 1891, 12½ per cent. in 1892, 10 per cent. in 1893, 8 per cent. in 1894, and only 4 per cent. for last year—it must be some satisfaction for the remaining English shareholders to see that American investors evidently do not regard the company's prospects as permanently bad."

Pig Iron Production.

The *Railroad Gazette* says: "The pig iron statistics collected by our enterprising contemporaries the *Iron Age* and the *American Manufacturer*, and published once a month, are of interest to all connected with the iron trade, but we are just now a little puzzled which one of these papers to believe. The *Iron Age* begins its report with a bold headline 'Pig Iron Production Stationary,' while the *American Manufacturer* has an editorial headed 'Pig Iron Again Increasing.' Turning to the figures of weekly capacity of furnaces in blast at the different dates, we find a wide disagreement between the two papers for the last nine months, although previously they had agreed quite closely. Here are the figures for January 1 to May 1, 1895 and 1896, in thousands of gross tons:

1895.	*Jan. 1.*	*Feb. 1.*	*Mar. 1.*	*Apr. 1.*	*May 1.*
Iron Age	168.4	163.4	157.0	158.1	156.6
American Manufacturer	175.3	159.0	153.8	154.5	153.3
Difference	+6.9	—4.4	—3.2	—6.6	—1.3
1896.	*Jan. 1.*	*Feb. 1.*	*Mar. 1.*	*Apr. 1.*	*May 1.*
Iron Age	207.5	198.6	189.6	187.5	188.3
American Manufacturer	235.4	217.3	212.7	211.6	214.7
Difference	27.9	18.7	23.1	24.1	26.4

Domestic News from Abroad.

An English government report for last year on the trade of the British consular district of Boston points out "that that port was the only one on the eastern and gulf seaboard of the United States to increase the volume of its exports in 1895. While those of New York declined 2.41 per cent., those of Boston rose 5.15 per cent., and, taking imports and exports together, the trade of Boston was greater last year than in 1894 by 22.4 per cent., while New York could boast an improvement of only 8.9 per cent., and Philadelphia, Baltimore and New Orleans recorded decreases. Of the exports from Boston 84¾ per cent. consists of agricultural produce, and, therefore, it is not surprising that 92 per cent. of the whole comes to the United Kingdom." The British consul notes a diminution in the demand for American flour, and explains that, "with the improved roller mills in use in England, the millers there can produce a better flour from mixed wheat of various qualities than the American millers can when using more than a single grade of wheat, which does not allow the American producer to compete with the English in point of price."

Grain Rail Rates.

The New York correspondent of the Minneapolis *Northwestern Miller* writes that journal that "the special committee of the Produce Exchange, which has been considering the alleged discrimination in rates against New York, has formally notified the Joint Traffic Association of the intention of the Produce Exchange to bring action before the Interstate Commerce Commission and the New York railway commissioners to secure an equitable adjustment of grain rates on shipments of export grain by Atlantic coast points. The notice, it is understood, was given in answer to a request from the joint traffic managers for further time to consider the matter. The committee of the Produce Exchange has been in negotiation with the traffic commission for several months without making any progress, and was, at last, apparently tired of lack of success. Counsel for the Produce Exchange is preparing a case for the Interstate Commerce Commission, which will consider the general subject of differentials, and the other, before the State Railway Commission, will concern the differentials on shipments of grain from Buffalo."

PRICES OF ACTIVE SHARES ON THE NEW YORK STOCK EXCHANGE FOR THE CURRENT WEEK.

THE STATE OF TRADE.

[A Summary of Special Telegrams to BRADSTREET'S.]

The improvement in the trade situation is confined to the demand for hides, leather and shoes, the tendency of prices of same to advance, and an improvement in request for dry goods, hats and shoes from wholesalers at St. Paul, Kansas City, Omaha and Baltimore. The crop outlook in South Carolina and Kentucky is brighter because of recent rains, and a generally better feeling exists among sugar producers and handlers in Louisiana and Texas because of the recent sugar-bounty decision.

General business continues quiet, and at larger financial centers less commercial paper is making, even at lower rates. A between-seasons trade has begun to assert itself, and from a number of points mercantile collections are less satisfactory, in some instances more difficult. There is no gain in volume of May business at Chicago, it being less than an average, although greater than during May, 1895. Labor troubles at Milwaukee have an unfavorable effect on business. In Texas both corn and cotton crops are retarded for want of rain. At St. Louis and throughout contiguous territory, and at smaller business centers along the track of the recent storm, business has been interrupted. Damage from the cyclone in St. Louis alone has been heavy, in addition to which shipments from jobbers are delayed, and retail merchants are suffering from the effects of the storm.

Speculation in the New York stock market is at a standstill, awaiting political developments in connection with the currency. Actual holders of securities are not sellers, but professionals and small margin operators have liquidated sufficiently to cause moderate concessions in prices. London neglects the American market, while the price of British investments continues to advance. The decision of the court upholding the legality of the Joint Traffic Association is regarded as a point in favor of owners of railroad securities. The St. Louis tornado and damage to railroad property was among the bearish factors, as was the continued gold export to Germany. Shipments this week amount to $4,600,000.

Exports of wheat (flour included as wheat) from both coasts of the United States during the week amount to 2,064,000 bushels, as compared with 1,906,000 bushels last week, 2,426,000 bushels in the week one year ago, 2,401,000 bushels in the week two years ago, and with 3,253,000 bushels three years ago.

The industrial situation, except as to boots and shoes, is unimproved. Cottons are dull and low on oversupply, the price of raw having no influence. Wool prices continue to favor buyers, with manufacturers running at reduced capacity. Stocks of old wools are heavy, and new is beginning to arrive. Pig iron prices remain about as a week ago, but speculative sales having been made at cut quotations. Stocks are heavy and production is decreasing. There is less demand for billets, and the outlook in iron and steel is not for improvement prior to the middle of July.

Bank clearings throughout the United States for the past six business days amount to $918,000,000 (nothing estimated), a falling off as compared with the preceding week of 7.3 per cent., but an increase of 12 per cent. as compared with the fourth week of May, 1895, and of 29 per cent. as contrasted with the corresponding week of 1894. This week's bank clearings as compared with the corresponding total in 1853, three weeks after the outbreak of the panic, show an increase of 2.2 per cent., but as compared with the last week of May in 1892, the total is 10 per cent. smaller.

The total number of business failures in the United States during the week is 227, as compared with 216 last week, 205 in the week one year ago, 183 in the corresponding week two years ago, 214 in the like week of 1893, and 163 in the corresponding period of 1892.

The price movement is again downward, wheat, corn and oats, as well as pork and lard, exhibiting unexpected shrinkages. Coffee, cotton and petroleum are likewise lower, and sales of pig iron and billets by middlemen have been made a shade under nominal figures. Wheat flour, coal and print cloths are practically unchanged, while refined sugar and tinplates report advances. Hides and leather are firm at recent advances, and the tendency is upward.

Some delay of business is still reported in the Canadian Dominion owing to the prospective elections. Advices from Newfoundland are that general trade is unusually dull, and from Nova Scotia that it is quiet. Rain is needed in New Brunswick, and in the Province of Quebec the volume of business is smaller than in previous weeks, owing to the holiday. Needed rains have fallen there, with corresponding improvement in the agricultural districts. Jobbers in staple lines at Toronto report business quiet. Bank clearings at Winnipeg, Hamilton, Toronto, Montreal and Halifax amount to $16,009,000 this week, against $19,821,000 last week, as compared with $17,897,000 in the week a year ago, and with $16,994,000 in the corresponding week in 1894. The total number of business failures in the Canadian Dominion this week is 25, compared with 28 last week, 25 in the week a year ago, and 36 two years ago.

FINANCIAL.

The Money Market.

The supply of funds in the New York loan market appears to be increasing from week to week. It is stated that outside institutions are paying off loans to their New York correspondents, thus augmenting the amount of money seeking employment, and depriving the current gold shipments of any influence or effect on rates. Time money is offered freely, with a very light demand, short time loans being 2½ @3 per cent. and four to six months' arrangements 3½ @4 per cent. The supply of commercial paper is moderate and the demand large, best names and doubles commanding 4@ 4¼ per cent. Call money is superabundant at 1½ @2½ per cent.

Foreign Exchange.

The situation in this department has been unchanged, the inquiry for remittances being small; but, on the other hand, the supply of exchange, apart from that created by the operations of the gold shippers, is very limited. At the same time the market is so narrow that it will not absorb any large drawings, and the specie exports are restricted by that circumstance. The gold shipments comprised $1,550,000 taken on Monday, $1,250,000 which went by Thursday's steamer, and $1,800,000 to be shipped to-day, a total of $4,600,000 for the week. Most of this gold, as in recent instances, goes to Germany. It was expected that Friday's shipments would be much larger, though the Treasury reduced its price for gold bars in consequence of the very high quality of the gold coin now delivered against legal tenders and Treasury notes. Some anticipated shipments have been postponed till next week. Posted rates have been unchanged at 4.88@4.89½ all week, and the quotations for actual business in demand sterling bills have varied only fractionally between 4.88⅝@ 4.88¾.

Closing quotations on Friday for actual business in other classes of bills were: Cables, 4.89; commercial bills, 4.87; francs, 5.16¼ @5.15; reichsmarks, 95¼ @95 11/16.

The Bank of England discount rate remains at 2 per cent. The bank reported for the week a decrease of £41,000 in specie, and the proportion of reserve is 59.33 per cent., against 58.39 per cent. last week. In the London open market discount is 13/16@⅞ per cent. and call money ½@¾ per cent.

The following table shows the imports (exclusive of specie) at the port of New York for the week ending May 22, 1896:

	1896.	1895.
Dry goods	$1,526,606	$2,563,091
General merchandise	7,452,600	6,551,864
Totals for the week	$8,979,206	$9,114,955
Previously reported	196,008,806	202,489,559
Since January 1	$204,988,072	$211,604,414

The exports (exclusive of specie) from New York to foreign ports for the week ending May 26 were $46 683 below those of last week. The following enables comparisons to be made with the corresponding period of last year:

	1896.	1895.
For the week	$8,048,701	$7,200,542
Previously reported	150,054,471	137,594,691
Since January 1	$158,103,172	$144,795,233

The New York Banks.

The known movement of money between the interior and this city resulted in a gain of about $5,000,000 to the New York banks during the week ending May 23. This was partially offset by withdrawals of money in connection with the operations of gold shippers. The bank statement issued last Saturday, however, shows an increase in cash holdings of over $2,800,000, almost equally divided between the items of specie and legal tenders. The decrease of $3,000,000 in loans reflects the falling off in the offerings of commercial paper and the small demand for funds in Stock Exchange circles. There was also a decrease of less than $1,000,000 in deposits, and the surplus reserve increases $3,123,525, the figures of the statement comparing as follows with those of the preceding week:

	May 16, '96.	May 23, '96.	Changes.	
Loans	$476,458,400	$473,400,400	Dec.	$3,058,000
Specie	60,114,300	61,541,500	Inc.	1,427,200
Legal tenders	82,962,600	84,420,300	Inc.	1,458,300
Deposits	497,993,300	497,041,200	Dec.	952,100
Circulation	14,382,800	14,529,800	Inc.	147,000
Total reserve	143,076,300	145,961,800	Inc.	2,885,500
Reserve required	124,498,325	124,260,300	Dec.	238,025
Surplus reserve	18,577,975	21,701,500	Inc.	3,123,525

At the corresponding period last year the surplus reserve was $40,005,150, against $77,601,700 in 1894.

The bank statement for the current week appeared on Friday and shows the following changes:

Loans	Inc.	$1,756,000
Specie	Inc.	914,500
Legal tenders	Inc.	72,900
Deposits	Inc.	1,832,900
Circulation	Inc.	75,300
Surplus	Inc.	529,175

THE STOCK MARKETS.

The New York Stock Market.

Speculative inactivity seemed to fairly reach its culmination in the present week. The limited volume of transactions is a sufficient indication of the total lack of interest in the stock market and of the expectant attitude of the financial public. The business of the Stock Exchange from day to day has been in the hands of the small traders, whose position changes constantly, but who, on the whole, have been sellers, with a consequent increase in the outstanding short account. European interests have done little or nothing in our stocks, the London market, which displays a further booming tendency in purely "home investments," and a disposition to put both consols and British railway shares to unheard-of prices, being apparently unwilling to pay attention to American stocks while there is any uncertainty about the platforms of the great parties in relation to our currency. The St. Louis tornado, and consequent damage to railroad companies' property, was among the discouraging factors of the week, but the leading place in that connection was taken by the continuance of gold shipments, and the reduction of the government legal-tender redemption fund to about $108,000,000. The fact that the United States Senate is willing to consider a bill that would deprive the Treasury of the power it possesses under existing legislation to sell bonds in order to keep up the redeemable quality of the greenbacks and Treasury (silver) notes has also had an unfavorable effect, even if the "street" appreciates the fact that such legislation can never become a law. Nor does Wall street neglect the circumstance that prices for commodities are at a low level, seldom, if ever, equaled, though against all this must be set the favorable crop prospects, and the belief that the protests and representations of the country's business interests will decide the policy of the political organizations in connection with the currency of the country. The decision of the United States Court as to the legality of the new trunk-line combination, which it holds is not a pool nor an illegal association under the law, has also had an effect, and would seem to strengthen the determination of owners of railroad securities to hold on to their possessions.

The market on Friday was stronger, closing generally higher on short covering, usual before a holiday, an increase in bank reserves, smaller than expected gold withdrawals for export, and the deposit of $1,000,000 in the Sub-Treasury by a prominent bank in exchange for notes. Dullness was, however, a marked feature, as previously.

Boston Stock Market.

The market has ruled more quiet, but coppers have held up quite well. Boston & Montana has met with considerable attention and prices have been maintained. Calumet & Hecla closes 1 point higher. Pioneer has met with good demand at lower prices, while Dominion Coal has been active. Railroads have ruled quiet, but values hold up well. Sugar shows a further decline in price, but considerable trading has been noted. Bay State Gas continues active, although the price has worked down ½ point for the week. Leather stock dull.

Prices of principal shares, with volume of transactions, have been as follows:

General Mention.

Messrs. Winslow, Lanier & Co. will pay dividends on a number of securities, a list of which will be found in another column.

The Oregon Improvement reorganization committee, consisting of John I. Waterbury, T. Jefferson Coolidge, Jr., E. Rollins Morse, Edwin S. Hooley and Jules S. Bache, have prepared a plan of reorganization, which was submitted to the security-holders on Friday. Copies of it may be obtained at the Manhattan Trust Company, New York, or the Old Colony Trust Company, Boston. This plan provides for the issue of the following new securities: $5,000,000 of first mortgage 5 per cent. fifty-year gold bonds, $5,000,000 of 4 per cent. noncumulative preferred stock, and $9,000,000 of common stock. First mortgage bondholders receive in cash the amount of the coupon on their bonds maturing June 1, 1896, namely, $30 per bond and 110 per cent. in new five per cent. bonds, bearing interest from June 1, 1896. The new first mortgage bonds not set aside for the present firsts are to be issued at no greater rate than $100,000 per annum, and only for the purchase of new steamships and other needed property, which is to be added to the security for such bonds. Holders of consolidated mortgage bonds who pay 12½ per cent., or $125 per bond, receive 62½ per cent. in new preferred stock and 75 per cent. in new common stock. Holders of preferred stock who pay 12½ per cent., or $12.50 per share, receive 62½ per cent. in new preferred stock and 75 per cent. in new common stock. Holders of common stock who pay 10 per cent., or $10 per share, receive 10 per cent. in new preferred stock and 50 per cent. in new common stock. First mortgage bonds should be deposited on or before July 1. On making such deposit the holders will receive in cash the interest maturing June 1, 1896, to wit, $30 per bond. Consolidated mortgage bonds and preferred and common stock should be deposited on or before July 1. The plan has been accepted by the holders of a large amount of all classes of bonds and stock. It has also been approved by President Ralston, of the Farmers' Loan and Trust Company, the trustee of both mortgages, who recommends the security-holders to accept it, and by Mr. F. P. Olcott, chairman of the first mortgage bondholders' protective committee.

THE VOLUME OF TRADE.

NO MATERIAL IMPROVEMENT IN ANY LINE EXCEPT BOOTS AND SHOES.

A BETWEEN-SEASON'S DEMAND AT MOST CENTERS.

[Special to BRADSTREET'S.]

Larger Eastern Cities.

Boston, May 29.—The tone of general trade continues quiet, and operations are conducted in a hand-to-mouth way. There is no speculative interest in merchandise, and the demands of the trade are further curtailed. The money market is dull, and every day appears to intensify the dullness. Very little new paper is making, and even with rates shaded borrowers fail to be attracted. Call money is offered freely at 3 per cent., and on government or high-grade municipal bonds 2½ per cent. would be accepted. Collateral loans are quoted at 3½@4 per cent. The boot and shoe trade is in better shape, and manufacturers are generally well supplied with orders, but at low prices, and with leather and hides advancing in cost, buyers are more anxious to get in orders before advance in footwear takes place. Iron and steel are held steady, but trade is slow. Lumber is quiet, with moderate building operations in progress. Coal is steady.

Providence, May 29.—While cotton manufacturers say there is a slight tendency toward improvement, they are only taking contracts for short time and making staple articles. Woolen manufacturers say there is no change; while there is a tendency to improve one month, there is a decrease the next, and they are only getting out samples. The manufacturers of cardboard used by lithographers and others note a falling off in orders this month.

Philadelphia, May 29.—Dullness continues in wool, and among textile manufacturers purchases made are for immediate wants. General depression reigns in dry goods, and retailers are cautious in placing orders. Sugar has advanced.

Pittsburgh, May 29.—The busy season with a majority of local jobbing houses is on the wane. The volume done during the past three months as compared with that of the like period last year is about the same. But little cutting in prices has been noted, and in general business has been satisfactory. Collections are still reported unsatisfactory. There has been some business in the local iron market, but demand is not up to expectations. Prices are firm at present quotations, and the outlook is considered promising.

Buffalo, May 29.—There are no new or encouraging features in general business. Trade is slow, and collections still slower.

Baltimore, May 29.—Business has been quiet. Clothing houses have salesmen on the road soliciting fall orders, and are meeting with encouragement.

West and Northwest.

Cleveland, May 29.—General merchandise jobbing trade conditions are without noteworthy change. Iron and steel markets continue quiet. Country collections are not materially improved.

Cincinnati, May 29.—Business continues quiet. Collections are difficult.

Detroit, May 29.—The trade situation here shows little change from last week. Business is fair in most lines, but collections continue only fairly satisfactory.

Chicago, May 29.—There has been no improvement in any line of business for the week, and trade is rather below the average for the season, but is better for the month of May than last year. Orders are small, and buyers are doing most of their purchasing by mail. Inquiries for steel have fallen off, and manufacturers do not look for an increase until after the first of July. A few fair-sized contracts for pig iron have been closed at last week's decline, but there is no disposition to make further reductions. Light hardware is steady, with a fair call. Building materials are slow. Lumber is weak, as manufacturers are forcing their common stock on this market at lower prices. Eggs and potatoes have advanced, but produce trade, on the whole, is only fair. Wool receipts, 2,752,547 pounds. Money has accumulated with the banks and the demand has fallen off, but bankers are indisposed to reduce interest rates. Collections are rather slow.

Louisville, May 29.—Business is light by reason of it being between seasons, and attention is being directed more to collections, which are reported only fair. Favorable rains have greatly improved the crop outlook.

St. Louis, May 29.—General business is seriously interfered with by the recent cyclone. Manufacturers and jobbers are complaining of delayed shipments, and local retail houses in the visited districts will not be able to resume operations for some time. Continual rains in contiguous territory have also affected trade in some lines, but bettered it in others. Still, a depressing effect is felt, on the whole. Building operations are slow,

materials in consequence being in only fair demand. The iron trade in nearly all branches report only small transactions of new business. Tinplates show improvement both in values and sales. Leather continues firm, it being ordered in larger quantities. Collections are only fair.

Kansas City, May 29.—Jobbers are satisfied with business for the past week. Collections are not so good. Retail trade is up to the average. Country produce shipments are liberal, with low values.

Milwaukee, May 29.—Owing to the continued boycott, trade is slow and unsatisfactory in the city and surroundings. Collections are slow.

St. Paul, May 29.—Dry goods, boot and shoe and hat and cap houses report a gratifying increase in future delivery orders as compared with a year ago, but wet weather has depressed retail trade, and sorting-up orders are light. This applies to all lines. Collections only fair.

Minneapolis, May 29.—Business is quiet in most lines, but will brighten somewhat with seasonable weather. Flour sales this week show an improvement. Lumber mills are just commencing operations. Sales in that line are fair.

Omaha, May 29.—Trade in staple lines has been good during the past week. Collections are fair.

Sioux Falls, May 29.—Jobbers note some improvement in sales. There is a better feeling among retailers. Collections are very fair. Retail trade is fair.

Southern Cities.

Charleston, May 29.—General trade is very quiet. There is some little movement in groceries. Moderate rains have improved the crop outlook, but more is still needed.

Savannah, May 29.—Wholesale trade is fair, with considerable falling off in retail owing to return of "May Week" excursionists. Collections are only fair. Receipts and shipments of rosin and turpentine are unchanged, but moving well, with good demand for each.

Atlanta, May 29.—Considerable activity is reported in the boot and shoe trade. Otherwise trade is about the same as for the last few weeks.

Augusta, May 29.—All lines of trade are quiet, although dry goods and shoe jobbers report encouraging orders for future delivery.

Jacksonville, May 29.—There is but little revival in wholesale business. Collections are only fair, but retail business is rather good for the end of the month.

Birmingham, May 29.—Summer season quietness prevails.

Chattanooga, May 29.—Business continues without any marked change. All factories are in good condition. Pig iron is slow.

Nashville, May 29.—Trade continues quiet. It is rather early for active opening. The money market is inactive; supply plentiful. Lenders are very discriminating in choice of collateral. The stock market is dull.

Memphis, May 29.—No change is noted in the state of trade or collections.

New Orleans, May 29.—The recent decision sustaining the sugar-bounty act has produced a good feeling in all lines, and a larger volume of business is looked for. Cotton is in moderate demand. Sugar and rice are quiet. Demands for loans are fair for the season, with funds ample.

Galveston, May 29.—Trade continues quiet in all lines and collections poor. Reports from the interior of the state indicate that corn is suffering on account of dry weather, as is also late-planted cotton, which is retarded in its growth by lack of rain. The decision of the Supreme Court in the sugar-bounty cases is a source of great satisfaction to manufacturers and handlers of sugar in this district.

Pacific Coast.

San Francisco, May 29.—The general market is quiet, though about the same as the past two or three seasons. There is a small decline in wheat freights. Produce and fruits are fairly active. Cherries are plentiful and cheaper. Collections are slow.

Portland, May 29.—Politics and preparations for state, county and city elections have slightly reduced the volume of business during the past week. Wool has not begun to move. The strike among the fishermen on the Columbia river still continues, and there has been little canning as yet. Dry goods and millinery have slightly improved. Collections are fair.

Seattle, May 29.—General trade will sum up about the same as for April, and is fair. A second order for about $75,000 worth of cedar blocks for Indianapolis has been received.

Tacoma, May 29.—The first cargo of new tea arrived to-day. Direct connection is announced between Northern Pacific steamers and Calcutta and the South African line. Lumber shipments are active. General trade is fair.

Canada.

Toronto, May 29.—Business is quiet in wholesale circles, the holiday on Monday interfering with the movement. The outlook is uncertain. Wheat is about 2c. lower and hard to sell.

Montreal, May 29.—There is no change in the general state of trade. The volume of business for the week is curtailed by the holiday on Monday. Values show no special change, and orders from the country show that buyers are acting cautiously. The money market is somewhat easier. Rains have been pretty general all over the province, and were badly needed. Prospects are moderately good. Quebec city reports but little change. Trade there is quiet, with collections fair. The timber trade is brighter, with good prospects.

Halifax, May 29.—The season here is backward, and there is not much improvement to be reported. The impending Dominion elections have a tendency to unsettle general business. St. John's, Newfoundland, reports trade unusually dull this spring. The long ice blockade, following on a poor seal fishery, was very detrimental to the business interests of the colony. Advices from St. John, N. B., state that trade is quiet in all lines, with few, if any, fluctuations in prices. Collections are about the same as usual at this season. Rain is much needed for the crop, as well as for the lumber drives. Forest fires are doing great damage to the timber lands.

Dry Goods.

The market continues quiet and unsatisfactory, with only a hand-to-mouth business in most departments. Retailers are having a fair business, but with agents and jobbers trade is slow. Cotton fabrics continue dull, and to sell, very low figures have to be accepted. The cost of raw cotton cuts no figure in the price of goods, and manufacturers are yet feeling the depression of an oversupply. Printed fabrics are slow of sale, outside of some fancy specialties that have been good the whole season. Ginghams are dull and featureless. Dress woolens are dull, with few orders by agents, while the jobbing call is dull. The fall sale with agents has not proved very satisfactory as yet. Men's-wear woolens meet with a slow sale, and much machinery is yet idle. Preparations for light-weight samples are being made.

Wool.

The market continues dull, with values nominal and in favor of buyers. The feature is the absence of demand. Manufacturers are using only a small proportion of their usual capacity, and it does not take much to meet their needs. To induce purchases ahead, the price has to be made much lower than at present, as no one appears to have any faith in improvement in the near future. Values have steadily worked down since the first of the year, and there is no more prospect of a turn for the better now than was the case two months since. The stock of old wool is excessive, and new wools are beginning to come in more freely. Foreign wools are held steady, but move slow. Mohairs are easier at 45@50c. for Cape and Turkey.

IMPROVING LAKE TRADE.

The New York *Press* says: "Bessemer, the first of Rockefeller's line of twelve steamers and consorts, was launched at Cleveland recently. She is 412 feet long and will carry 4,600 tons of freight on 15 feet draught. She was one of three steamers launched that day at lake shipyards, one slightly smaller and the other slightly larger than the Bessemer. The shipyards of the Great Lakes had ninety vessels of various classes and dimensions under construction when the season opened this spring. A fleet of this number a dozen years ago would have meant comparatively little, for the size would have averaged far less than this one does now, for only twenty-four are less than 100 feet long, and there are eight that will carry 5,000 tons each, and there are twenty others that will carry 4,000 tons or more, all on a draught of 15 feet. Nearly fifty of the new boats are to be of steel, which is now supplanting wood for all vessels of large size, in spite of the extreme liability of all metal boats to receive serious injury from contact with rock, which abounds in the passages between the lakes. Fortunes are lost every season by raking the bottoms of the big carriers on the rocks, but the ease of repairing them and rendering them as good as new holds the steel construction in favor. This new fleet will cost, when finished, a trifle less than $10,000,000, and it will have a carrying capacity of close to 200,000 tons at a single load. As two weeks is rather more than the average time for a vessel to make a round trip on the lakes, unless it tows as well as carries, the amount of freight that the new fleet will move in the season of eight months is seen to be enormous; when it is added to the already great fleet in operation, some vessels of which are carrying more than 5,000 tons of freight at a load, the size of the lake trade may be imagined. Now, as to ocean shipbuilding at home. There are under construction on our seaboard, east and west, seventy-one vessels, most of them steel steamers, but many of them of moderate size. Only one, the cruiser Brooklyn, is 400 feet long. This is her exact length, while of the lake list there are thirteen that are 400 feet long or more. The total length of the new ocean fleet is 12,500 feet instead of the 20,000 feet of the unfinished lake fleet. Business on the lakes is much better than was indicated when boats began to move a month ago. Most rates of freight are firmer and some are higher."

GOLD MINING IN ECUADOR.

The *Pall Mall Gazette* (London) says: "In reports as to the position of the Playa de Oro Mining Company, it is contended that among the gold-producing countries of the world Ecuador promises in the near future to take up a standing in the first rank. The placer gold fields, situated in the province of Esmeraldas, in the northeastern part of Ecuador, cover an area of 200 square miles or thereabouts, and consist of huge banks of gold-bearing gravel. This vast tract of auriferous country, it is said, is held in fee simple by four companies, prominent among which is the Playa de Oro Mining Company, which has already expended over $600,000 on its plant, which is being rapidly pushed on to completion, and already shipments of gold have been made by the company of over 1,150 ounces from the washing done during the progress of development operations. The three other companies working in the district are also engaged in active development, and the necessary machinery for the treatment of the gravel is being erected. The deposits are situated at the foot of the Andes, and from their location can be worked economically, the water power for hydraulic mining being supplied by the Santiago river and other large streams in the neighborhood of the properties, while the lands are well timbered. Another favorable point is the climate, which boasts of little variation during the year, and is very suitable to Europeans. Under the amended Ecuadorian mining laws, mining property, mining machinery and the output of the mines enjoy immunity from any description of taxation for a period of twenty-five years from the date of the new law three or four years ago. Labor can be obtained both plentifully and cheaply, and cable communication with New York is being established by the Ecuadorian government, while negotiations are in hand with the Pacific Steamship Company for the establishment of a service."

THE ENGLISH SILK INDUSTRY.

The London *Times* says: "In a recent issue attention was drawn to the remarkable revival in the worsted industry of Yorkshire. There is reason to hope that a similar era of prosperity is in store for English silk manufacturers. It is stated that about thirty-five years ago the total number of looms in this country was not less than 150,000, that 5,000,000 pounds of silk were used every year, and that the annual output amounted to £12,000,000. Presently continental fabrics of an inferior kind were imported in large quantities, and silk went out of fashion as an article of dress. Messrs. Liberty & Co. have made more than one effort to restore the popularity of the homemade article, contending that it is equal in technical excellence, superior in artistic effect, and considerably more reasonable in price. The latest of the exhibitions which they have prepared with this object was opened on Monday at their East India house, 218 Regent street. It consists of brocades for court trains, brocades for dinner dresses, lustrous brocades for morning gowns, blouses and dresses for young ladies, and warp-printed silks. All have been designed, woven and colored under the direction of the firm, and are both pleasing to the eye and attractive to the touch. There are about one hundred examples, ranging from costly brocades to silks at as low a price as between 4s. and 5s. a yard. A 'myosotis' in warp, having on it a group of flowers, and woven with a brocade over it, should not escape the notice of the visitor. The exhibition has a wider scope than any of its predecessors, since it includes work from Yorkshire, Staffordshire and Cheshire; and if Spitalfields is not so largely represented by name as before, it is because many of the weavers of that district, which became a center of the industry soon after the revocation of the edict of Nantes drove hundreds of workers in this way to England, have formed a new settlement in more salubrious Braintree."

ARTIFICIAL SILKSTUFFS.

An expert correspondent of the London *Pall Mall Gazette* says: "The other day it was our old friend ramie which, after breaking the hearts of one inventor after another for a good fifty years past, seemed really to have been conquered, and to have been brought, in the matter of price, within the sphere of practical commercial operations. To-day it is artificial silk—that is, a substance resembling silk, and fulfilling in large measure the manifold purposes of silk, produced by an elaborate chemical process out of such a prosaic substance as wood pulp. Artificial silk may be described as the 'newest fiber.' It is the latest used, or about to be used, extensively for manufacturing purposes in this country. As we were told the other day, a company has been formed with a capital of £30,000; works are to be erected near Manchester; six weaving firms have agreed to take the whole product, and others are arranging for the laying down on their premises, on the royalty system, of the special machinery necessary for the manufacture of the stuff. No such elaborate preparations have been made hitherto for the production of artificial silk; and, moreover, Chardonnet silk is largely sui generis, so that the epithet newest really applies.

"But it must not be inferred that this is the first time we have heard of artificial silk, and that it is a thing of quite recent origin. I believe the idea, pretty much on the lines subsequently developed, was first suggested by one of the leading French chemists who flourished in the first quarter of the present century. But, anyway, the particular process which is about to be exploited in Lancashire is thirteen years old, and a search of recent patent records will reveal perhaps a score of others, all ingenious and most of them obviously unworkable. The only serious rival of Chardonnet silk—that invented by a German chemist named Lehner—was actually worked at Bradford about eighteen months ago. I can vouch for this much, for it was my privilege to see the Lehner machine at work there, and subsequently to inspect at Manchester a vast profusion of beautiful fabrics, woven pure and as mixtures, from the yarn produced by that machine. As a consequence of the impression it created, and of the promises of support given by men in the trade, a company known as the Lehner Artificial Silk Company was formed at Bradford for the manufacture of this silk. I have heard nothing of it for some time, but it is a common practice among those textile manufacturers who 'have a good thing on' to proceed as quietly as possible after their initial purpose has been accomplished in order to prevent other processes designed towards the same end from being undertaken seriously, and the owners of the Lehner rights may at this moment be as busy as they possibly can be turning out their fiber. Certainly the yarns and fabrics I saw were admirable in regard both to appearance and strength; and if the contention of Dr. Lehner that his silk could be produced in large quantities at less than half the cost of genuine silk yarn was really or approximately true, there seems no reason why his process should not prove as successful as that which owes its existence to Count Chardonnet,

"The two methods start from a common basis in wood pulp, but each has its particular way of accomplishing its end. In Lehner's process an emulsion of collodion is made from vegetable pulp and passed through a peculiar glass tube, having a fine orifice, and called a spinaret, from which a thread exudes. A combination of these threads—from four to twelve, according to the size of yarn required—passes over a roller and forward to an ordinary fly spindle, and so on to the bobbin. The yarn thus made goes through a second process, this time a chemical one, in order to get rid of the alcohol and to reduce its inflammability to the same safe point as pure silk. Anyone thirsting for full particulars may find them in patent No. 11,831 of the year 1891.

"I have given details of the Lehner process because of a widespread impression that the Chardonnet silk is the only one that has been fully developed. Among the artificial silks of which we heard before Lehner's was that of a French chemist named Duvivier, who, starting from Mulder's investigations into the properties of raw silk, dissolved a mixture of guncotton, albumen and gelatine in crystallizable acetic acid, and drew it out in threads exactly like the collodion in Chardonnet's process. Duvivier's death, however, prevented his invention from being fully developed, and I believe no further progress has been made with it. Count Chardonnet turned out from the beginning a very presentable-looking article, and great things were expected from it. A big company was formed, and works were erected at Besançon. But in actual use this silk was found to be so woefully lacking in tenacity that it could not be woven, and to be so highly inflammable into the bargain as to be a source of great danger to any one handling it. These were fatal defects, and the silk went back into the laboratory again, and stayed there for three or four years, until the difficulties were finally removed. I assume, at least, that they have been finally removed, for it is not to be supposed that the representatives of the English syndicate which went to Besançon not long ago to make a full investigation into the matter prior to the purchase of the English rights, and with that purchase in view, provided everything was satisfactory, would have recommended their principals to take the final step unless they had satisfied themselves by the most stringent tests that all the drawbacks had been obviated. It must not be forgotten, however, that artificial silk is not so strong as the real article. The relation is as four or four and a half to six. But it is quite strong enough for weaving purposes, especially in mixtures.

"There can be no doubt that artificial silk has a future, and if that future lies in the direction of acknowledged mixtures for the purpose of improving, or, at any rate, beautifying woolen and cotton fabrics, then the world ought—and probably will—welcome it. But its wholesale use as an adulterant of silk is to be deprecated. No one supposes that the silk manufacturers of Lyons will be deterred by any number of protests from substituting it for silk in those so-called silk goods which Englishwomen appreciate so highly. In fact, we know that the bulk of the wood silk now turned out at Besançon is employed along with ramie in the sophistication of Lyons silks, even of the better grades. All the same, even if competition makes adulteration a necessity, we have quite as much as we want, or is good for us, already."

NEW BANKING LAW IN MEXICO.

The London *Financial News* says: "The Mexican Minister of Finance, Señor Limantour, has introduced an important measure to Congress concerning the establishment of new banks in Mexico. In the preliminary remarks which accompany the bill, Señor Limantour states that no concessions for banks of issue have been granted since 1892, partly because of the crisis through which the country has so successfully passed, and partly because of the absence of all banking legislation. Owing to the latter reason, each bank claimed to be ruled exclusively by the terms of its charter, 'and this gave rise to much uncertainty and discussion, while thwarting the supervision of the government over the institutions in question.' Moreover, the National Bank of Mexico has frequently protested that the charters granted by the government for the establishment of banks of issue in the states constitute a violation of the letter and spirit of the concession which it obtained in 1884, as well as of the provisions of the code of commerce which was in force at that time. Under these circumstances, Señor Limantour rightly points out that the local banks might be exposed to serious trouble were the National Bank to take legal proceedings to prevent the circulation of the notes of other banks. To obviate this difficulty the executive entered into negotiations with the representatives of the National Bank with the view of bringing about an arrangement whereby the bank should desist from opposing the grant of charters to banks of issue outside the federal district, and should also agree to the modification of its charter, 'out of regard to the government and the interests of the commercial community.' These negotiations have, presumably, had a satisfactory termination, and the result is the bill with which we now propose to deal, in which there is a provision authorizing the executive to pay a suitable indemnity to the National Bank in consideration of its agreeing to such a modification of its charter as shall bring it into harmony with the general banking law of the republic.

"It will be admitted that the Mexican government, by its straightforward methods, sets an example which might be followed with advantage by the governments of other republics in Central and South America. The introduction of banking facilities will undoubtedly benefit the community at large, and ought to be taken in hand; but it speaks volumes for Señor Limantour's integrity that he did not pass his banking law first and discuss the rights of the National Bank afterwards, when the measure had become an accomplished fact. It is this regard for vested interests which has obtained for the Mexican government such a high place in the esteem of its foreign creditors, and it is with lively satisfaction that we see in the prosperity of the country the truth of the saying that 'honesty is the best policy.' The terms of the new banking law seem to have been framed on very careful and conservative lines. Before any concession for banks of issue in the states of the republic is granted the applicants must deposit government bonds to the value of 20 per cent. of the cash capital with which each bank commences business, and no bank can start with a smaller paid-up capital than $250,000. The note issue is limited to three times the amount of the paid-up capital, and it is provided that the cash on hand shall never be less than one-half of the bank's circulation, plus the amount of deposits at call or subject to withdrawal at three, or less, days' notice. This is a very stringent requirement according to European ideas, but a very wholesome one in a country where it is necessary to insure the stability of the banks, and to prevent too much generosity in the granting of loans or too free a use of the printing machine. The national government will be represented in each bank by an officer whose duties will be specified, and who, in auditing the annual accounts and balance-sheets, will have the same powers as those which the auditors have under the law of joint-stock companies. The banks must also publish a monthly balance-sheet, setting forth not only the balances of the accounts required by law to be published, but the cash balance, the amount of notes in circulation, and the amount of the deposits at call and short notice. Under such regulations it will be difficult for the banks to conceal their true position, and the public will feel additionally safe in intrusting its money to them. The bill, as framed, does Señor Limantour great credit, and it affords a fresh instance of the ability by which the financial administration of Mexico has been characterized in recent years, which, we trust, will continue should anything occur to deprive the country of its President or Finance Minister, under whom Mexico has made such immense progress."

FOREIGN TRADE OF CHINA.

The Boston *Journal of Commerce* says: "Of the total foreign trade of China last year, amounting to nearly 315,000,000 taels ($441,000,000), the British empire did something over 215,000,000; the Japanese, 32,000,000; the continent of Europe, Russia excepted, 29,000,000; the United States, 20,500,000, and the Russian empire over 17,000,000. The following extract from the Chinese official tables of a few leading staples shows how the imports last year compared with those in 1894:

	1894.	1895.
Gray shirtings, pieces	4,939,445	5,387,489
White shirtings, pieces	2,527,088	1,843,645
Japanese shirtings, pieces	10,826	856
T-cloths, pieces	996,211	1,414,302
Indian cloths, pieces	249,535	369,628
Japanese cloth, pieces	2,154	11,837
English drills, pieces	208,455	149,018
American drills, pieces	705,031	518,402
Japanese drills, pieces	11,741	10,425
English sheetings, pieces	399,837	506,239
American sheetings, pieces	1,275,744	762,095
Japanese sheetings, pieces	10,471	3,691
English yarn, piculs	67,950	56,007
Indian yarn, piculs	1,060,542	1,057,046
Japanese yarn, piculs	31,104	19,148
